Then the ratio \( \frac{\Delta \lambda_d}{\Delta \lambda} \) is proportional to:
   (A) \( \frac{\lambda_d^3}{\lambda^2} \)  (B) \( \frac{\lambda_d^2}{\lambda^2} \)  (C) \( \lambda_d/\lambda \)  (D) \( \frac{3}{\lambda_d^2} \)

**Paragraph for Questions 15 - 16**

Consider a simple RC circuit as shown in Figure 1.

**Process 1:** In the circuit the switch S is closed at \( t = 0 \) and the capacitor is fully charged to voltage \( V_0 \) (i.e., charging continues for time \( T >> RC \)). In the process some dissipation \((E_D)\) occurs across the resistance R. The amount of energy finally stored in the fully charged capacitor is \( E_C \).

**Process 2:** In a different process the voltage is first set to \( \frac{V_0}{3} \) and maintained for a charging time \( T >> RC \). Then the voltage is raised to \( \frac{2V_0}{3} \) without discharging the capacitor and again maintained for a time \( T >> RC \). The process is repeated one more time by raising the voltage to \( V_0 \) and the capacitor is charged to the same final voltage \( V_0 \) as in Process 1.

These two processes are depicted in Figure 2.

**15.** In Process 2, total energy dissipated across the resistance \( E_D \) is:

- (A) \( E_D = 3 \left( \frac{1}{2} CV_0^2 \right) \)
- (B) \( E_D = \frac{1}{2} CV_0^2 \)
- (C) \( E_D = 3CV_0^2 \)
- (D) \( E_D = \frac{1}{3} \left( \frac{1}{2} CV_0^2 \right) \)

**16.** In Process 1, the energy stored in the capacitor \( E_C \) and heat dissipated across resistance \( E_D \) are related by:

- (A) \( E_C = \frac{1}{2} E_D \)
- (B) \( E_C = 2E_D \)
- (C) \( E_C = E_D \)
- (D) \( E_C = E_D \ln 2 \)

**Paragraph for Questions 17 - 18**

The finger traces out the surface of a cone, shown by the dotted line. The radius of the path traced out by the point where the ring and the finger is in contact is \( r \). The finger rotates with an angular velocity \( \omega_0 \). The rotating ring **rolls without slipping** on the outside of a smaller circle described by the point where the ring and the finger is in contact (Figure 2). The coefficient of friction between the ring and the finger is \( \mu \) and the acceleration due to gravity is \( g \).
17. The minimum vale of \( \omega_0 \) below which the ring will drop down is:

(D) \( \sqrt{\frac{g}{2\mu(R-r)}} \)

18. The total kinetic energy of the ring is:
