**Reaction:**

\[
2\text{NaHCO}_3 \rightarrow \text{Na}_2\text{CO}_3 + \text{CO}_2 + \text{H}_2\text{O}
\]

\[
\text{CO}_2 + \text{Ca(OH)}_2 \rightarrow \text{CaCO}_3 + \text{H}_2\text{O}
\]

### 10

**a)**
- i) Double displacement reaction
- ii) Combination reaction
- iii) Decomposition reaction
- iv) Displacement reaction

**b)**

3BaCl₂ + Al₂(SO₄)₃ → 2AlCl₃ + 3BaSO₄

**OR**

**11.**

- The Metals high up in reactivity series are very reactive, because of difference in their reactivity.
- Methods of extraction of metals depends on their reactivity.
- Electrolytic reduction followed by electrolytic refining.

### 12.

Magnetic field will be nullified. B will be zero at X.

Since, direction of Magnetic Field lines due to both wires opposite to each other.

### 13

- Cause of dispersion:
  - (i) Shape of prism
  - (ii) Different colours bend with different angles (different colour has different refractive index or different speed)

Arrow & labelling
Scattering of light means to throw light in all possible direction when light interact with particles of medium.

(i) The Sun appears reddish at sun-rise: the Sun rays have to travel through a large atmospheric distance near the horizon. As the wavelength of red light is maximum in the visible range, hence the scattering is least. The blue light and shorter wavelengths are scattered away by the particles. This gives rise to the reddish appearance of the sun. /diagrammatic answers may be given fig:11.12

(ii) The sky appears blue: Blue colour has shorter wavelength than red. When sunlight passes through the atmosphere, the fine particles in the air scatter the blue light more strongly than red. Hence the clear sky appears blue.

14 (a) Manmade ecosystem

<table>

</thead>
</table>

(b) The micro-organisms that breakdown the complex organic substances into simple inorganic substances.

- No decomposition would take place.
- Soil would be unsuitable for crops/it would result in imbalance in ecosystem
- Nutrients would not returned back to the nutrient pool
- Land pollution/affect soil fertility or any other.

OR

- The higher energy UV radiations split apart some molecular oxygen into free oxygen atoms. These atoms then combine with molecular oxygen to form ozone.

\[
\begin{align*}
O_2 & \quad \text{UV} \quad O+O \\
O_2 + O & \quad \rightarrow \quad O_3
\end{align*}
\]

- It prevents harmful UV radiation to reach the earth.
- CFC/chlorofluoro carbon/aerosol
- Skin cancer/reduction in immune system/cataract/damages eyes.

15 Excessive use of natural resources, so that immediate benefits are available for present generation.

Advantages

- Industrial growth will be fast
- Rapid development will take place
- Resource are utilized to their maximum
- Growth in economy/employment (any other relevant advantage).

\[
\frac{1}{2} \times 4
\]

16 a) (i) Tall plants
(ii) Tall: dwarf = 3:1
(iii) Dwarf plants.

Tall is dominant and dwarf is recessive.

Segregation of genes

\[
\frac{1}{2} \quad \frac{1}{2} \quad \frac{1}{2} \quad \frac{1}{2} + \frac{1}{2}
\]
(b) The structures which have the same structural plans/origin but different functions. eg: forelimb of human and wings of a bird

(b) Diagram for esterification

Description
1mL ethanol, 1mL glacial acetic acid and a few drops of conc. H$_2$SO$_4$
Warmed in a water bath
Water is poured into the beaker
Fruity smell is produced

OR

- Soaps are sodium salts of fatty acids.
- Detergents are sodium salts of sulphonic acids. Soaps do not act in hard water due to formation of scum while detergents do.
- Cleansing action of soaps:
  In soaps carbon chain dissolves in oil and the ionic end dissolves in water to form micelle

- Hard water contains Ca$^{2+}$/ Mg$^{2+}$ ions that react with soap and form precipitates called scum.
- By using detergents in hard water / boiling hard water

| 1mL ethanol | 1mL glacial acetic acid and a few drops of conc. H$_2$SO$_4$ | Warmed in a water bath | Water is poured into the beaker | Fruity smell is produced | ½ x 4 | ½ | ½ | 1½ | 2 | 5 | ½ |
20  (a) It is the rate at which electrical energy is dissipated or consumed in an electrical circuit is called electric power.

We know

\[ V = \frac{W}{Q} \]

\[ W = V Q \]

\[ W/t = V Q/t \]

\[ P = VI \]

\[ P = IR.I \]

\[ P = I^2R \]

(b) Bulb I: \( I = \frac{P}{V}, 100W \, 220V \)

\[ I_1 = \frac{100}{220} \, A \]

\[ = \frac{5}{11} \, A \]

Bulb II: 60W 220V

\[ I_2 = \frac{60}{220} \, A \]

\[ = \frac{3}{11} \, A \]

Total current \( (5/11 + 3/11) \, A = 8/11 \, A = 0.72 \, A \)

OR

(a) Three resistors \( R_1, R_2, R_3 \) are joined.

They are connected with the battery and ammeter and a plug key.

The ammeter reading is noted.

Position of ammeter is changed to different position and readings taken each time.

The reading remain same.

(If it is explained by diagram, give full credit)

(b)

(i) \[ \frac{1}{R_p} = \frac{1}{R_1} + \frac{1}{R_2} \]

\[ \frac{1}{R_1} = \frac{1}{R_1} + \frac{1}{R_1} \]

\[ R_t = R_p + 12 \, \Omega \]

\[ R_t = 24 \, \Omega \]

\[ V = IR_t \]

\[ I = \frac{6}{24} = 0.25 \, \text{Ampere} \]

(ii) Same readings of \( A_1 \) and \( A_2 \)

21  (a) Hypermetropia / farsightedness

Causes:

i. Shortening of eyeball

ii. Curvature of eye lens decreases / focal length of eye lens increases.

(b) Hypermetropic eye
(c) Convex lens
\[ \frac{1}{f} = \frac{1}{v} - \frac{1}{u} \]
\[ = \frac{1}{(-50\text{cm})} - \frac{1}{(-25\text{cm})} \]
\[ = \frac{1}{50\text{cm}} \]

Hence, \( f = 50 \text{ cm} = 0.5 \text{ m} \)

Therefore, power = \( \frac{1}{0.5} \text{D} = 2\text{D} \)

(d) Correction of Hypermetropia

<table>
<thead>
<tr>
<th>Mistakes</th>
</tr>
</thead>
</table>
| \( F_1 \) and \( F_2 \) are not equidistant from the optical center of the lens. \( O F_1 \neq O F_2 \), \( 2OF_1 \neq 2OF_2 \) | \( \frac{1}{2} \times 2 \)
| Image should be magnified | 
| (any two) | 1 |

OR

(i) Prism should be within the boundary all through the experiment.
(ii) Pins should be fixed vertically and the feet of the pins should be observed.
(iii) Protractor should be used correctly.
(iv) Angle should be taken between 30° and 60° to observe the refraction clearly.
(v) Separation between the pins should be kept at least 5 cm.

(Any four) | \( \frac{1}{2} \times 4 \) | 2 |

24

- Nucleus elongates
- Constriction in cytoplasm / cell membrane
| 25 | - Taking out the leaf peel and mount on the slide <br> - stain with safranin <br> - mount with glycerin <br> - place cover slip and observe under microscope. | ½ x4 |

**OR**

i) To prevent the entry of oxygen/escape of CO₂/air <br> ii) KOH absorb CO₂ gas <br> iii) KOH absorb CO₂ gas/Partial vacuum created

| 26 | - No Change <br> - In solid form (powder no reaction will take place because H⁺/H₃O⁺ ions are not available. <br> Na₂ SO₄ + BaCl₂ → NaCl + BaSO₄ (white ppt) | 1 ½ ½ 2 |

**OR**

Cu<Fe< Zn<Al <br> i) Deposition of brown colour on iron. <br> ii) Blue Colour change is to green.

| 27 | (i) X- acidic, pH of X is < 7 <br> (ii) Y- basic, pH of Y is > 7 | 1 1 2 |
