### WHICH FESTIVAL COMES FIRST?

#### Question 1:

Given below are some festivals we celebrate during the year.  
Look at the calendar (2018) to find the days on which these fall.

Answer:

Considering the calendar **2018**,

Name of the festival	Date	Day
Diwali	November 7	Wednesday
Pongal	January 14	Sunday
Raksha Bandhan	August 26	Sunday
Gandhi Jayanti	October 2	Tuesday
Milad-UI-Nabi	November 21	Wednesday
Onam	August 25	Saturday
Guru Nanak's Birthday	November 23	Friday
Guru Ravidas's Birthday	January 31	Wednesday
Christmas Day	December 25	Tuesday
Bihu	April 15	Sunday

#### Question 2:

Arrange the festivals in the order in which they come in the year.

Answer:

Pongal, Guru Ravidas's Birthday, Bihu, Onam, Raksha Bandhan, Gandhi Jayanti, Diwali, Milad-UI-Nabi, Guru Nanak's Birthday, Christmas Day.

#### Question 3:

Which festival comes in the beginning of the year?

**Answer:**  
Pongal

**Question 4:**  
Which festival comes at the end of the year?

**Answer:**

### CALENDAR MAGIC

**Question:**  
Which is the number in the centre of the square?

**Answer:**  
13

**Question:**  
How many such lines can you draw?

**Answer:**  
Four such lines can be drawn.

**Question:**  
Add the three numbers on each of these lines. What do you notice?

**Answer:**  
 $5 + 13 + 21 = 39$   
 $6 + 13 + 20 = 39$   
 $19 + 13 + 7 = 39$   
 $12 + 13 + 14 = 39$   
The sum of the numbers in each of the lines is 39.

**Question:**  
Now look at the calendar of 2018. Also look for the present month and draw any similar square in your notebook. Does the magic work for these?

**Answer:**  
For the month of November 2018:

$$6 + 14 + 22 = 42$$

$$8 + 14 + 20 = 42$$

$$7 + 14 + 21 = 42$$

$$13 + 14 + 15 = 42$$

The sum is same i.e. 42. The magic works here as well.

**Question:**

Is this magic possible on a  $10 \times 10$  number chart? Go to the chapter 'Fun with Numbers' and check.

**Answer:**

Let's check with a  $10 \times 10$  number chart

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

Yes, the magic works in a  $10 \times 10$  number chart also.

$$\text{The cross lines- } 1 + 12 + 23 + \dots + 89 + 100 = 505$$

$$\text{and } 10 + 19 + 28 + \dots + 82 + 91 = 505$$

As there is no middle line, we have to get average sum of both horizontal lines

$$5 + 15 + 25 + \dots + 95 \text{ and } 6 + 16 + 26 + \dots + 96 = 505$$

Average sum of both vertical lines

$$41 + 42 + 43 + \dots + 50 \text{ and } 51 + 52 + 53 + \dots + 60 = 505.$$

Thus, the magic works here as well.
