

EXERCISE 1.2

PAGE NO: 16

1. A book exhibition was held for four days in a school. The number of tickets sold at the counter on the first, second, third and final day was respectively 1094, 1812, 2050 and 2751. Find the total number of tickets sold on all the four days.

Solutions:

Number of tickets sold on 1st day = 1094 Number of tickets sold on 2nd day = 1812

Number of tickets sold on 2 Id day = 1812Number of tickets sold on 3 rd day = 2050

Number of tickets sold on 51d day = 2050Number of tickets sold on 4th day = 2751

Hence, number of tickets sold on all the four days = 1094 + 1812 + 2050 + 2751 = 7707 tickets

2. Shekhar is a famous cricket player. He has so far scored 6980 runs in test matches. He wishes to complete 10,000 runs. How many more runs does he need? Solutions:

Shekhar scored = 6980 runs He want to complete = 10000 runs Runs need to score more = 10000 - 6980 = 3020Hence, he need 3020 more runs to score

3. In an election, the successful candidate registered 5,77,500 votes and his nearest rival secured 3,48,700 votes. By what margin did the successful candidate win the election? Solutions:

No. of votes secured by the successful candidate = 577500No. of votes secured by his rival = 348700Margin by which he won the election = 577500 - 348700 = 228800 votes \therefore Successful candidate won the election by 228800 votes

4. Kirti bookstore sold books worth Rs 2,85,891 in the first week of June and books worth Rs 4,00,768 in the second week of the month. How much was the sale for the two weeks together? In which week was the sale greater and by how much? Solutions:

Price of books sold in June first week = Rs 285891 Price of books sold June second week = Rs 400768 No. of books sold in both weeks together = Rs 285891 – Rs 400768 = Rs 686659 The sale of books is the highest in the second week Difference in the sale in both weeks = Rs 400768 – Rs 285891 = Rs 114877 ∴ Sale in second week was greater by Rs 114877 than in the first week.

5. Find the difference between the greatest and the least 5-digit number that can be written using the digits 6, 2, 7, 4, 3 each only once.

Solutions: Digits given are 6, 2, 7, 4, 3 Greatest 5-digit number = 76432 Least 5-digit number = 23467

https://byjus.com

Difference between the two numbers = 76432 - 23467 = 52965

 \therefore The difference between the two numbers is 52965

6. A machine, on an average, manufactures 2,825 screws a day. How many screws did it produce in the month of January 2006?

Solutions:

Number of screws manufactured in a day = 2825Since January month has 31 days Hence, number of screws manufactured in January = $31 \times 2825 = 87575$ Hence, machine produce 87575 screws in the month of January 2006

7. A merchant had Rs 78,592 with her. She placed an order for purchasing 40 radio sets at Rs 1200 each. How much money will remain with her after the purchase? Solutions:

Total money the merchant had = Rs 78592 Number of radio sets she placed an order for purchasing = 40 radio sets Cost of each radio set = Rs 1200 So, cost of 40 radio sets = Rs 1200 × 40 = Rs 48000 Money left with the merchant = Rs 78592 – Rs 48000 = Rs 30592 Hence, money left with the merchant after purchasing radio sets is Rs 30592

8. A student multiplied 7236 by 65 instead of multiplying by 56. By how much was his answer greater than the correct answer?

Solutions:

Difference between 65 and 56 i.e (65 - 56) = 9The difference between the correct and incorrect answer = 7236 × 9 = 65124 Hence, by 65124, the answer was greater than the correct answer

9. To stitch a shirt, 2 m 15 cm cloth is needed. Out of 40 m cloth, how many shirts can be stitched and how much cloth will remain?

Solutions:

Given

Total length of the cloth = 40 m

 $=40 \times 100 \text{ cm} = 4000 \text{ cm}$

Cloth required to stitch one shirt = 2 m 15 cm

 $= 2 \times 100 + 15 \text{ cm} = 215 \text{ cm}$

Number of shirts that can be stitched out of 4000 cm = 4000 / 215 = 18 shirts Hence 18 shirts can be stitched out of 40 m and 1m 30 cm of cloth is left out

10. Medicine is packed in boxes, each weighing 4 kg 500g. How many such boxes can be loaded in a van which cannot carry beyond 800 kg?

Solutions:

Weight of one box = 4 kg 500 g = 4 × 1000 + 500 = 4500 g Maximum weight carried by the van = 800 kg = 800 × 1000 = 800000 g

https://byjus.com

NCERT Solutions For Class 6 Maths Chapter 1 Knowing Our Numbers

Hence, number of boxes that can be loaded in the van = 800000 / 4500 = 177 boxes

11. The distance between the school and a student's house is 1 km 875 m. Everyday she walks both ways. Find the total distance covered by her in six days. Solutions:

Distance covered between school and house = 1 km 875 m = 1000 + 875 = 1875 mSince, the student walk both ways.

Hence, distance travelled by the student in one day = $2 \times 1875 = 3750$ m

Distance travelled by the student in 6 days = $3750 \text{ m} \times 6 = 22500 \text{ m} = 22 \text{ km} 500 \text{ m}$

 \therefore Total distance covered by the student in six days is 22 km and 500 m

12. A vessel has 4 litres and 500 ml of curd. In how many glasses, each of 25 ml capacity, can it be filled?

Solutions:

Quantity of curd in the vessel = $41500 \text{ ml} = 4 \times 1000 + 500 = 4500 \text{ ml}$

Capacity of 1 glass = 25 ml

 \therefore Number of glasses that can be filled with curd = 4500 / 25 = 180 glasses

Hence, 180 glasses can be filled with curd.
