

**EXERCISE 12.4**

1. Observe the patterns of digits made from line segments of equal length. You will find such segmented digits on the display of electronic watches or calculators.

(a)				...	...
	6	11	16	21 ...	$(5n + 1) \dots$
(b)				...	...
	4	7	10	13 ...	$(3n + 1) \dots$
(c)				...	...
	7	12	17	22 ...	$(5n + 2) \dots$

If the number of digits formed is taken to be  $n$ , the number of segments required to form  $n$  digits is given by the algebraic expression appearing on the right of each pattern. How many segments are required to form 5, 10, 100 digits of the kind

**Solution:-**

(a) From the question it is given that the numbers of segments required to form  $n$  digits of the kind  is  $(5n + 1)$

Then,

$$\begin{aligned} \text{The number of segments required to form 5 digits} &= ((5 \times 5) + 1) \\ &= (25 + 1) \\ &= 26 \end{aligned}$$

$$\begin{aligned} \text{The number of segments required to form 10 digits} &= ((5 \times 10) + 1) \\ &= (50 + 1) \\ &= 51 \end{aligned}$$

$$\begin{aligned} \text{The number of segments required to form 100 digits} &= ((5 \times 100) + 1) \\ &= (500 + 1) \\ &= 501 \end{aligned}$$

(b) From the question it is given that the numbers of segments required to form  $n$  digits of the kind  is  $(3n + 1)$

Then,

$$\begin{aligned} \text{The number of segments required to form 5 digits} &= ((3 \times 5) + 1) \\ &= (15 + 1) \\ &= 16 \end{aligned}$$

$$\begin{aligned} \text{The number of segments required to form 10 digits} &= ((3 \times 10) + 1) \\ &= (30 + 1) \\ &= 31 \end{aligned}$$

$$\begin{aligned} \text{The number of segments required to form 100 digits} &= ((3 \times 100) + 1) \\ &= (300 + 1) \\ &= 301 \end{aligned}$$

(c) From the question it is given that the numbers of segments required to form  $n$  digits of the kind  is  $(5n + 2)$

Then,

$$\begin{aligned} \text{The number of segments required to form 5 digits} &= ((5 \times 5) + 2) \\ &= (25 + 2) \\ &= 27 \end{aligned}$$

$$\begin{aligned} \text{The number of segments required to form 10 digits} &= ((5 \times 10) + 2) \\ &= (50 + 2) \\ &= 52 \end{aligned}$$

$$\begin{aligned} \text{The number of segments required to form 100 digits} &= ((5 \times 100) + 2) \\ &= (500 + 2) \\ &= 502 \end{aligned}$$

2. Use the given algebraic expression to complete the table of number patterns.

S. No.	Expression	Terms									
		1 <sup>st</sup>	2 <sup>nd</sup>	3 <sup>rd</sup>	4 <sup>th</sup>	5 <sup>th</sup>	...	10 <sup>th</sup>	...	100 <sup>th</sup>	...
(i)	$2n - 1$	1	3	5	7	9	-	19	-	-	-
(ii)	$3n + 2$	5	8	11	14	-	-	-	-	-	-
(iii)	$4n + 1$	5	9	13	17	-	-	-	-	-	-
(iv)	$7n + 20$	27	34	41	48	-	-	-	-	-	-
(v)	$n^2 + 1$	2	5	10	17	-	-	-	-	10001	-

Solution:-

(i) From the table  $(2n - 1)$

Then, 100<sup>th</sup> term =?

Where  $n = 100$

$$= (2 \times 100) - 1$$

$$= 200 - 1$$

$$= 199$$

(ii) From the table  $(3n + 2)$

5<sup>th</sup> term =?

Where  $n = 5$

$$= (3 \times 5) + 2$$

$$= 15 + 2$$

$$= 17$$

Then, 10<sup>th</sup> term =?

Where  $n = 10$

$$= (3 \times 10) + 2$$

$$= 30 + 2$$

$$= 32$$

Then, 100<sup>th</sup> term =?

Where  $n = 100$

$$= (3 \times 100) + 2$$

$$= 300 + 2$$

$$= 302$$

(iii) From the table  $(4n + 1)$

5<sup>th</sup> term =?

Where  $n = 5$

$$= (4 \times 5) + 1$$

$$= 20 + 1$$

$$= 21$$

Then, 10<sup>th</sup> term =?

Where  $n = 10$

$$= (4 \times 10) + 1$$

$$= 40 + 1$$

$$= 41$$

Then, 100<sup>th</sup> term =?

$$\begin{aligned}\text{Where } n &= 100 \\ &= (4 \times 100) + 1 \\ &= 400 + 1 \\ &= 401\end{aligned}$$

**(iv)** From the table  $(7n + 20)$

5<sup>th</sup> term = ?

$$\begin{aligned}\text{Where } n &= 5 \\ &= (7 \times 5) + 20 \\ &= 35 + 20 \\ &= 55\end{aligned}$$

Then, 10<sup>th</sup> term = ?

$$\begin{aligned}\text{Where } n &= 10 \\ &= (7 \times 10) + 20 \\ &= 70 + 20 \\ &= 90\end{aligned}$$

Then, 100<sup>th</sup> term = ?

$$\begin{aligned}\text{Where } n &= 100 \\ &= (7 \times 100) + 20 \\ &= 700 + 20 \\ &= 720\end{aligned}$$

**(v)** From the table  $(n^2 + 1)$

5<sup>th</sup> term = ?

$$\begin{aligned}\text{Where } n &= 5 \\ &= (5^2) + 1 \\ &= 25 + 1 \\ &= 26\end{aligned}$$

Then, 10<sup>th</sup> term = ?

$$\begin{aligned}\text{Where } n &= 10 \\ &= (10^2) + 1 \\ &= 100 + 1 \\ &= 101\end{aligned}$$

So the table is completed below.

S. No.	Expression	Terms									
		1 <sup>st</sup>	2 <sup>nd</sup>	3 <sup>rd</sup>	4 <sup>th</sup>	5 <sup>th</sup>	...	10 <sup>th</sup>	...	100 <sup>th</sup>	...
(i)	$2n - 1$	1	3	5	7	9	-	19	-	199	-
(ii)	$3n + 2$	5	8	11	14	17	-	32	-	302	-
(iii)	$4n + 1$	5	9	13	17	21	-	41	-	401	-
(iv)	$7n + 20$	27	34	41	48	55	-	90	-	720	-
(v)	$n^2 + 1$	2	5	10	17	26	-	101	-	10001	-
