- Mathematical Tools (Session - 1) - NEET

## Daily Practice Problems

1. If a man travels 10 km towards north, after that he turns towards east and travels 5 km and again he turns toward south and travels 3 km , then what is the coordinate of man with respect to its initial position.
2. For a quadratic equation $a x^{2}+b x+c=0$, if sum of root is -1 and product of root is 1 , then which of the following hold true?
a. $a^{2}=b c$
b. $b^{2}=a c$
c. $c^{2}=a b$
d. $a b c=1$
3. In the quadratic equation, $p q x^{2}-\left(p^{2}+q^{2}\right) x+p q=0$, then find the value of $x$.
4. The inclination of the line $x-y+3=0$ with the positive direction of $x$-axis is
a. $45^{\circ}$
b. $135^{\circ}$
c. $-45^{\circ}$
d. $-135^{\circ}$
5. Variation of velocity with time of particle is straight line as shown below. Find the slope of this straight line

6. Given two points, $P=(0,-1)$ and $Q=(4,1)$ on the line, find the equation of the line.
7. An inclined plane rises 1 in 10 . If length of the inclined plane is 5 m , find the height of the raised end above the horizontal.
8. If a particle moves with velocity $v(t)=2 t^{2}-t \mathrm{~m} / \mathrm{s}$, then find the velocity of particle at $\mathrm{t}=3 \mathrm{~s}$.

9. An expression is given by $\alpha=\frac{\theta}{t^{2}}$, find $\alpha$ in $\mathrm{rad} / \mathrm{s}^{2}$ if an angle of $600^{\circ}$ is covered in 10 second?
10. What will be the value of $z$, if $(z-2)^{2}-36=0$.

## BYJU'S Home Learning Program

## Answer Key

| Question <br> Number | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Answer <br> Key | $(5,7)$ | (a) | $\mathrm{x}=\frac{p}{q}$ <br> and $\frac{q}{p}$ | (a) | 1.33 |

| Question <br> Number | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Answer <br> Key | $y=\frac{1}{2} x-1$ | $\frac{5}{\sqrt{101}} m$ | $15 m / s$ | $\frac{\pi}{30}$ | 8 or -4 |

## Solutions

1. $(5,7)$

2. (a)

Quadratic equation $a x^{2}+b x+c=0$
Sum of roots, $-\frac{b}{a}=1 \Rightarrow b=-a$
Product of roots $\frac{c}{a}=1 \Rightarrow c=a$
On comparing, we get $a^{2}=b c$
3. In the given equation $\mathrm{a}=p q, b=-(p 2+q 2), c=p q$

Finding the roots using formula $x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$
Substituting and simplifying we get $\mathrm{x}=\frac{p}{q}$ and $\frac{q}{p}$
4. (a)

The equation of the line $x-y+3=0$ can be rewritten as

$$
y=x+3 \Rightarrow m=\tan \theta=1 \text { and hence } \theta=45^{\circ}
$$

5. (1.33)

$$
\begin{aligned}
& t_{1}=2 \mathrm{~s}, t_{2}=5 \mathrm{~s} \\
& v_{1}=3 \mathrm{~m} / \mathrm{s}, v_{2}=7 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

$$
\text { slope }=\frac{\left(v_{2}-v_{1}\right)}{\left(t_{2}-t_{1}\right)}=\frac{(7-3)}{(5-2)}=\frac{4}{3}=1.33
$$

## BYJU'S Home Learning Program

6. Slope $=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{1}{2}=m$

Substitute $m=\frac{1}{2}$, into the equation, $\mathrm{y}=\mathrm{mx}+\mathrm{b}$, to get the equation $y=\frac{1}{2} x+b$
Select one of the given points, for example $(4,1)$, and substitute the x and y values into the equation $y=\frac{1}{2} x+b$
We, then, get that $\mathrm{b}=-1$, which is the $y$-intercept.
Substitute $\mathrm{b}=-1$ to get the equation.

$$
y=\frac{1}{2} x-1
$$

7. 

Let $h$ be the horizontal raise
$\tan \theta=\frac{1}{10}$
$\sin \theta=\frac{1}{\sqrt{10^{2}+1^{2}}}=\frac{1}{\sqrt{101}}=\frac{h}{5}$
Therefore, $\mathrm{h}=\frac{5}{\sqrt{101}} \mathrm{~m}$
8. $v(t)=2 t^{2}-t$

$$
\mathrm{t}=3 \mathrm{~s}
$$

$$
v(3)=2 \times(3)^{2}-(3)=15 \frac{\mathrm{~m}}{\mathrm{~s}}
$$

9. Given $\alpha=\frac{\theta}{t^{2}}$

Angle covered $=600^{\circ}$
Time duration $(t)=10 \mathrm{sec}$
Since, $180^{\circ}=\pi$ radian
So, $600^{\circ}=600^{\circ} \frac{\pi}{180}=\frac{10 \pi}{3}$ radian

$$
\alpha=\frac{\theta}{t^{2}}=\frac{10 \pi}{300}=\frac{\pi}{30} \mathrm{rad} / \mathrm{s}^{2}
$$

10. $(\mathrm{z}-2)^{2}-36=0$
$(z-2)^{2}=36$
$(\mathrm{z}-2)= \pm 6$
$\mathrm{z}=2+6$ or $2-6$
$\mathrm{z}=8$ or -4
