## Topic covered:

- Mole Concept (Session - 1) - JEE

## Worksheet

1. Calculate the number of $\mathrm{NO}_{2}$ molecules in 4 moles of a pure sample of $\mathrm{NO}_{2}$ molecules.
a. $6.022 \times 10^{23}$
b. $24.088 \times 10^{23}$
c. $\quad 2.408 \times 10^{23}$
d. $12.044 \times 10^{23}$
2. Calculate the number of formula units of $\mathrm{Na}_{2} \mathrm{SO}_{4}$ in $4 / 9$ millimoles of a pure sample of $\mathrm{Na}_{2} \mathrm{SO}_{4}$.
a. $24.088 \times 10^{23}$
b. $2.41 \times 10^{20}$
c. $2.68 \times 10^{20}$
d. $2.68 \times 10^{23}$
3. Calculate the number of formula units of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$ present in $10^{-13}$ moles of pure $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$.
a. $\quad 6.022 \times 10^{10}$
b. $6.022 \times 10^{13}$
c. $\quad 6.022 \times 10^{12}$
d. $6.022 \times 10^{9}$
4. Find the number of moles of $\mathrm{NO}_{2}$ molecules in a sample containing $3.011 \times 10^{23}$ molecules of $\mathrm{NO}_{2}$.
a. $\quad 0.05$ moles
b. 0.5 moles
c. 2 moles
d. 0.25 moles
5. Find the number of moles of $\mathrm{HNO}_{3}$ molecules in a sample containing $10^{6}$ molecules of $\mathrm{HNO}_{3}$.
a. $2.66 \times 10^{-18}$ moles
b. $2.66 \times 10^{-20}$ moles
c. $1.66 \times 10^{-20}$ moles
d. $1.66 \times 10^{-18}$ moles
6. Find the number of millimoles of KOH in a sample containing 30 KOH molecules.
a. $4.98 \times 10^{-23}$
b. $0.498 \times 10^{-23}$
c. $4.98 \times 10^{23}$
d. $4.98 \times 10^{-20}$
7. Find the total number of oxygen atoms in 200 formula units of $\mathrm{Na}_{2} \mathrm{SO}_{4}$.
a. 800
b. 600
c. 1200
d. 1600
8. Find the total number of oxygen atoms in $3 \times 10^{3}$ formula units of $\left[\mathrm{Ni}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right] \mathrm{Cl}_{2}$.
a. $6 \times 10^{3}$
b. $18 \times 10^{3}$
c. $24 \times 10^{3}$
d. $0.6 \times 10^{3}$

## BYJU'S Home Learning Program

9. If we have a pure $\mathrm{CH}_{3} \mathrm{OH}$ sample and it contains a total of 6000 hydrogen atoms, then find the number of $\mathrm{CH}_{3} \mathrm{OH}$ molecules present in the sample.
a. 1200
b. 1000
c. 1500
d. 800
10. We have a pure $\mathrm{H}_{2} \mathrm{SO}_{4}$ sample and it contains a total of 1120 hydrogen atoms. Find the number of $\mathrm{H}_{2} \mathrm{SO}_{4}$ molecules present in the sample.
a. 560
b. 2240
c. 1120
d. 1000
11. If we have a $\mathrm{FeSO}_{4} .7 \mathrm{H}_{2} \mathrm{O}$ sample and it contains a total of 2233 oxygen atoms, then find the number of formula units of $\mathrm{FeSO}_{4 .} 7 \mathrm{H}_{2} \mathrm{O}$ present in the sample.
a. 210
b. 203
c. 103
d. 233
12. Find the number of O -atoms in $2 / 3$ moles of $\mathrm{NO}_{2}$.
a. $4.014 \times 10^{23}$
b. $4.014 \times 10^{20}$
c. $8.029 \times 10^{23}$
d. $8.029 \times 10^{20}$
13. How many C-atoms are present in 2.6 micromoles of $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ ?
a. $3.13 \times 10^{16}$
b. $6.26 \times 10^{16}$
c. $1.56 \times 10^{16}$
d. $9.39 \times 10^{16}$
14. How many 0 -atoms are present in $3 / 8$ millimoles of $\left[\mathrm{Co}\left(\mathrm{H}_{2} \mathrm{O}\right)_{4} \mathrm{Cl}_{2}\right] \mathrm{Cl}$ ?
a. $9.033 \times 10^{24}$
b. $2.26 \times 10^{24}$
c. $\quad 9.033 \times 10^{20}$
d. $2.26 \times 10^{20}$
15. Find the number of moles of $\mathrm{N}_{2} \mathrm{O}_{5}$ in a pure sample that contains 1 nanomole of 0 -atoms.
a. $2 \times 10^{-10}$ moles
b. $0.2 \times 10^{-10}$ moles
c. $4 \times 10^{-10}$ moles
d. $0.4 \times 10^{-10}$ moles
16. Find the number of moles of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$ in a pure sample that contains 0.045 moles of 0 -atoms.
a. 0.5 moles
b. 0.005 moles
c. 50 moles
d. 5 moles
17. Find the number of moles of $\mathrm{BaCl}_{2} 2 \mathrm{H}_{2} \mathrm{O}$ in a pure sample that contains $3 / 8$ kilomoles of oxygen atoms.
18. Find the total number of moles of electrons present in $24.088 \times 10^{23} \mathrm{SO}_{2}$ molecules.
a. 132 moles
b. 128 moles
c. 232 moles
d. 328 moles

## BYJU'S Home Learning Program

19. Find the total number of moles of electrons present in $6.022 \times 10^{18} \mathrm{H}_{3} \mathrm{PO}_{4}$ molecules.
a. 0.5 moles
b. 0.05 moles
c. 0.005 moles
d. 0.0005 moles
20. Find the total number of moles of electrons present in $12.044 \times 10^{14} \mathrm{PO}_{4}^{3-}$ ions.
21. If we have a pure $\mathrm{Na}_{2} \mathrm{SO}_{4}$ sample that contains a total of 7 billion electrons, then find the number of moles of $\mathrm{Na}_{2} \mathrm{SO}_{4}$ present in the sample.
a. $1.66 \times 10^{-16}$ moles
b. $1.66 \times 10^{-14}$ moles
c. $3.66 \times 10^{-16}$ moles
d. $3.66 \times 10^{-14}$ mole
22. If we have a pure $\mathrm{Ca}(\mathrm{NO} 3)_{2}$ sample that contains a total of 1.64 kilomoles of electrons then find the number of moles of $\mathrm{Ca}(\mathrm{NO})_{2}$ present in the sample.
a. 10 moles
b. 20 moles
c. 30 moles
d. 40 moles
23. If we have a pure $\mathrm{MgCO}_{3}$ sample that contains a total of 1.26 millimoles of electrons, find the number of moles of $\mathrm{MgCO}_{3}$ present in the sample.
24. Find the total number of electrons present in 40 millimoles of $\mathrm{BaSO}_{4}$. (atomic number of $\mathrm{Ba}=56$ )
a. $2.89 \times 10^{24}$
b. $3.89 \times 10^{24}$
c. $2.51 \times 10^{24}$
d. $3.51 \times 10^{24}$
25. If we have a pure $\mathrm{Na}_{2} \mathrm{CO}_{3}$ sample that contains a total of $7.8286 \times 10^{24}$ electrons, then find the number of moles of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ present in the sample.
a. 0.5 moles
b. 0.3 moles
c. $\quad 0.7$ moles
d. $\quad 0.25$ moles

## BYJU'S Home Learning Program

## Solutions

1. (b)

We know,
1 mole of $\mathrm{NO}_{2}=6.022 \times 10^{23} \mathrm{NO}_{2}$ molecules
So, 4 moles of $\mathrm{NO}_{2}=6.022 \times 10^{23} \times 4$ molecules $=24.088 \times 10^{23} \mathrm{NO}_{2}$ molecules
2. (c)

We know,
1 mole of $\mathrm{Na}_{2} \mathrm{SO}_{4}=6.022 \times 10^{23}$ formula units of $\mathrm{Na}_{2} \mathrm{SO}_{4}$
So, 1 millimole of $\mathrm{Na}_{2} \mathrm{SO}_{4}=6.022 \times 10^{20}$ formula units of $\mathrm{Na}_{2} \mathrm{SO}_{4}$
Therefore $4 / 9$ millimoles of $\mathrm{Na}_{2} \mathrm{SO}_{4}$
$=6.022 \times 10^{20} \times \frac{4}{9}$ formula units $=2.68 \times 10^{20}$ formula units of $\mathrm{Na}_{2} \mathrm{SO}_{4}$
3. (a)

We know,
1 mole of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}=6.022 \times 10^{23}$ formula units of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$
So, $10^{-13}$ moles of pure $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$
$=6.022 \times 10^{23} \times 10^{-13}$ formula units $=6.022 \times 10^{10}$ formula units of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$
4. (b)

We know,
$6.022 \times 10^{23}$ molecules of $\mathrm{NO}_{2}=1$ mole of $\mathrm{NO}_{2}$
So, $3.011 \times 10^{23}$ molecules of $\mathrm{NO}_{2}$
$=\frac{3.011 \times 10^{23}}{6.022 \times 10^{23}}$ moles $=0.5$ moles of $\mathrm{NO}_{2}$
5. (d)

We know,
$6.022 \times 10^{23}$ molecules of $\mathrm{HNO}_{3}=1$ mole of $\mathrm{HNO}_{3}$
So, $10^{6}$ molecules of $\mathrm{HNO}_{3}=\frac{10^{6}}{6.022 \times 10^{23}}$ moles $=1.66 \times 10^{-18}$ moles of $\mathrm{HNO}_{3}$
6. (d)

We know,
$6.022 \times 10^{23}$ molecules of $\mathrm{KOH}=1$ mole of KOH
So, 30 molecules of $\mathrm{KOH}=\frac{30}{6.022 \times 10^{23}}$ mole of KOH
$=\left(\frac{30}{6.022 \times 10^{23}}\right) \times 10^{3}$ millimoles of $\mathrm{KOH}=4.98 \times 10^{-20}$ millimoles of KOH

## BYJU'S Home Learning Program

7. (a)

Number of O-atoms in one formula unit of $\mathrm{Na}_{2} \mathrm{SO}_{4}=4$
So, number of O-atoms in 200 formula unit of $\mathrm{Na}_{2} \mathrm{SO}_{4}=200 \times 4=800$
8. (b)

Number of O -atoms in one formula unit of $\left[\mathrm{Ni}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right] \mathrm{Cl}_{2}=6$
So, number of 0 -atoms in $3 \times 10^{3}$ formula units of $\left[\mathrm{Ni}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right] \mathrm{Cl}_{2}=6 \times 3 \times 10^{3}$
$=18 \times 10^{3}$
9. (c)

From the molecular formula of $\mathrm{CH}_{3} \mathrm{OH}$,
1 mole $\mathrm{CH}_{3} \mathrm{OH}$ contains 4 moles of H atoms
So, we can say that 4 moles of H -atoms are present in 1 mole of $\mathrm{CH}_{3} \mathrm{OH}$.
Again, $6.022 \times 10^{23} \mathrm{H}$-atoms $=1$ mole of H -atoms
Therefore, 6000 H -atoms $=\frac{6000}{6.022 \times 10^{23}}$ moles of H -atoms
Hence number of $\mathrm{CH}_{3} \mathrm{OH}$ molecules present in the sample
$=\frac{6000}{6.022 \times 10^{23}} \times \frac{1}{4} \times 6.022 \times 10^{23}=1500$
10. (a)

From the molecular formula of $\mathrm{H}_{2} \mathrm{SO}_{4}$,
1 mole of $\mathrm{H}_{2} \mathrm{SO}_{4}$ contains 2 moles of H atoms
So, 2 moles of H -atoms are present in 1 mole of $\mathrm{H}_{2} \mathrm{SO}_{4}$
Again, $6.022 \times 10^{23} \mathrm{H}$-atoms $=1$ mole of H -atoms
Therefore, 1120 H -atoms $=\frac{1120}{6.022 \times 10^{23}}$ moles of H -atoms
Hence, number of $\mathrm{H}_{2} \mathrm{SO}_{4}$ molecules present in the sample
$=\frac{1120}{6.022 \times 10^{23}} \times \frac{1}{2} \times 6.022 \times 10^{23}=560$
11. (b)

From the molecular formula of $\mathrm{FeSO}_{4 .} 7 \mathrm{H}_{2} \mathrm{O}$,
1 mole of $\mathrm{FeSO}_{4} .7 \mathrm{H}_{2} \mathrm{O}$ contains 11 moles of O -atoms
So, 11 moles of 0 -atoms are present in 1 mole of $\mathrm{FeSO}_{4} .7 \mathrm{H}_{2} \mathrm{O}$
Again, $6.022 \times 10^{23} 0$-atoms $=1$ mole of 0 -atoms
Therefore, 22330 -atoms $=\frac{2233}{6.022 \times 10^{23}}$ moles of 0 -atoms
Hence, number of formula units of $\mathrm{FeSO}_{4} .7 \mathrm{H}_{2} \mathrm{O}$ present in the sample:
$=\frac{2233}{6.022 \times 10^{23}} \times \frac{1}{11} \times 6.022 \times 10^{23}=203$

## BYJU'S Home Learning Program

12. (c)

From the molecular formula of $\mathrm{NO}_{2}$,
1 mole of $\mathrm{NO}_{2}$ molecules contains 2 moles of O -atoms
So, $2 / 3$ moles of $\mathrm{NO}_{2}$ molecules contain $4 / 3$ moles of O atoms
Again, 1 mole of 0 -atoms $=6.022 \times 10^{23} 0$-atoms
Therefore, $4 / 3$ moles of 0 -atoms $=\frac{4}{3} \times 6.022 \times 10^{23}$
$=8.029 \times 10^{23} 0$-atoms
13. (d)

From the formula of $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$,
1 mole of $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ molecules contains 6 moles of C atoms.
So, 2.6 micromoles of $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ molecules contain $2.6 \times 6=15.6$ micromoles of C -atoms Again, 1 mole of C -atoms $=6.022 \times 10^{23} \mathrm{C}$-atoms
Therefore, 15.6 micromoles of C-atoms $=15.6 \times 10^{-6} \times 6.022 \times 10^{23} \mathrm{C}$-atoms $=9.39 \times 10^{16} \mathrm{C}$-atoms
14. (c)

From the formula of $[\mathrm{Co}(\mathrm{H} 2 \mathrm{O}) 4 \mathrm{Cl} 2] \mathrm{Cl}$,
1 mole of [ $\mathrm{Co}(\mathrm{H} 2 \mathrm{O}) 4 \mathrm{Cl} 2] \mathrm{Cl}$ formula unit contains 4 moles of O -atoms
So, $3 / 8$ millimoles of $\left[\mathrm{Co}\left(\mathrm{H}_{2} \mathrm{O}\right){ }_{4} \mathrm{Cl}_{2}\right] \mathrm{Cl}$ contain $\frac{3}{8} \times 4=\frac{3}{2}$ millimoles of O -atom
Again, 1 mole of O -atoms $=6.022 \times 10^{23} 0$-atoms
Therefore, $\frac{3}{2}$ millimoles of 0 -atoms $=\frac{3}{2} \times 10^{-3} \times 6.022 \times 10^{23} 0$-atoms
$=9.033 \times 10^{20} 0$-atoms
15. (a)

From the molecular formula of $\mathrm{N}_{2} \mathrm{O}_{5}$, 5 moles of O -atoms are contained in 1 mole of $\mathrm{N}_{2} \mathrm{O}_{5}$
So, 1 nanomole of 0 -atoms will be contained in
$=\frac{1}{5} \times 10^{-9}$ moles of $\mathrm{N}_{2} \mathrm{O}_{5}$
$=2 \times 10^{-10}$ moles of $\mathrm{N}_{2} \mathrm{O}_{5}$

## BYJU'S Home Learning Program

16. (b)

From the molecular formula unit of $\mathrm{CuSO}_{4.5} .5 \mathrm{H}_{2} \mathrm{O}$,
9 moles of O -atoms are contained in 1 mole of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$
So, 0.045 moles of 0 -atoms will be contained in
$=\frac{1}{9} \times 0.045$ moles $=0.005$ moles of $\mathrm{CuSO}_{4} .5 \mathrm{H}_{2} \mathrm{O}$
17. ( 187.50 mol )

From the molecular formula unit of $\mathrm{BaCl}_{2} .2 \mathrm{H}_{2} \mathrm{O}$, 2 moles of O -atoms are contained in 1 mole of $\mathrm{BaCl}_{2} .2 \mathrm{H}_{2} \mathrm{O}$
So, $3 / 8$ kilomoles of 0 -atoms will be contained in
$=\frac{1}{2} \times \frac{3}{8} \times 1000$ moles of $\mathrm{BaCl}_{2} .2 \mathrm{H}_{2} \mathrm{O}$
$=187.50$ moles of $\mathrm{BaCl}_{2} .2 \mathrm{H}_{2} \mathrm{O}$
18. (b)
$24.088 \times 10^{23} \mathrm{SO}_{2}$ molecules $=\frac{24.088 \times 10^{23}}{6.022 \times 10^{23}}$ moles $=4$ moles of $\mathrm{SO}_{2}$
The number of electrons in one molecule of $\mathrm{SO}_{2}=16+8 \times 2=32$ eletrons
So, the number of moles of electrons in one mole of $\mathrm{SO}_{2}=32$ moles
Therefore, total number of moles of electrons in 4 moles of $\mathrm{SO}_{2}=128$ moles
19. (d)
$6.022 \times 10^{18} \mathrm{H}_{3} \mathrm{PO}_{4}$ molecules $=\frac{6.022 \times 10^{18}}{6.022 \times 10^{23}}$ moles $=10^{-5}$ moles $\mathrm{H}_{3} \mathrm{PO}_{4}$
The number of electrons in one molecule of $\mathrm{H}_{3} \mathrm{PO}_{4}=3+15+8 \times 4=50$ electrons
So, the number of moles of electrons in one mole of $\mathrm{H}_{3} \mathrm{PO}_{4}=50$ moles
Therefore, the total number of moles of electrons in $10^{-5}$ moles of $\mathrm{H}_{3} \mathrm{PO}_{4}$ would be:
$=50 \times 10^{-5}$ moles $=0.0005 \mathrm{moles}$
20. $\left(10^{-7} \mathrm{~mol}\right)$

We know,
$12.044 \times 10^{14} \mathrm{PO}_{4}^{3-}$ ions $=\frac{12.044 \times 10^{14}}{6.022 \times 10^{23}}$ moles $=2 \times 10^{-9}$ moles $\mathrm{PO}_{4}^{3-}$ ions
The number of electrons in one $\mathrm{PO}_{4}^{3-}$ ion $=15+8 \times 4+3=50$ electrons
So, the number of moles of electrons in one mole of $\mathrm{PO}_{4}^{3-}$ ion $=50$ moles
Therefore, the total number of moles of electrons in $2 \times 10^{-9}$ moles of $\mathrm{PO}_{4}^{3-}$ ions:
$=50 \times 2 \times 10^{-9}$ moles $=10^{-7}$ moles

## BYJU'S Home Learning Program

21. (a)

One molecule of $\mathrm{Na}_{2} \mathrm{SO}_{4}$ contains $=(11 \times 2+16+8 \times 4)=70$ electrons
So, number of electrons in 1 mole of $\mathrm{Na}_{2} \mathrm{SO}_{4}=70 \times 6.022 \times 10^{23}$
Therefore $7 \times 10^{9}$ electrons will be contained in
$=\frac{7 \times 10^{9}}{70 \times 6.022 \times 10^{23}}$ moles of $\mathrm{Na}_{2} \mathrm{SO}_{4}$
$=1.66 \times 10^{-16}$ moles of $\mathrm{Na}_{2} \mathrm{SO}_{4}$
22. (b)

One molecule of $\mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}$ contains $=(20+2 \times 7+6 \times 8)=82$ electrons
So, number of electrons in 1 mole of $\mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}=82 \times 6.022 \times 10^{23}$
Therefore 1.64 kilomoles of electrons will be contained in
$=\frac{1.64 \times 1000 \times 6.02210^{23}}{82 \times 6.022 \times 10^{23}}$ moles of $\mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}$
$=20$ moles of $\mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}$
23. $\left(3 \times 10^{-5} \mathrm{~mol}\right)$

One molecule of $\mathrm{MgCO}_{3}$ contains $=(12+6+8 \times 3)=42$ electrons
So, number of electrons in 1 mole of $\mathrm{MgCO}_{3}=42 \times 6.022 \times 10^{23}$
Therefore, 1.26 millimoles of electrons will contained in
$=\frac{1.26 \times 10^{-3} \times 6.02210^{23}}{42 \times 6.022 \times 10^{23}}$ moles $=3 \times 10^{-5}$ moles of $\mathrm{MgCO}_{3}$
24. (c)

The total number of electrons present in one molecule of $\mathrm{BaSO}_{4}=56+16+32=104$
Therefore, total number of electrons present in one mole of $\mathrm{BaSO}_{4}=104 \times 6.022 \times 10^{23}$
Hence, total number of electrons present in 40 millimoles of $\mathrm{BaSO}_{4}$
$=104 \times 6.022 \times 10^{23} \times 40 \times 10^{-3}=2.51 \times 10^{24}$
25. (d)

Total number of electrons present in one molecule of $\mathrm{Na}_{2} \mathrm{CO}_{3}=11 \times 2+6+3 \times 8=52$ So, $52 \times 6.022 \times 10^{23}$ electrons are present in 1 mole of $\mathrm{Na}_{2} \mathrm{CO}_{3}$
Therefore, $7.8286 \times 10^{24}$ electrons will be present in
$=\frac{7.8286 \times 10^{24}}{52 \times 6.022 \times 10^{23}}$ moles of $\mathrm{Na}_{2} \mathrm{CO}_{3}$
$=0.25$ moles of $\mathrm{Na}_{2} \mathrm{CO}_{3}$
