General Instructions:

Read the following instructions very carefully and strictly follow them:

(i) Question paper comprises five sections – A, B, C, D and E.
(ii) There are 27 questions in the question paper. All questions are compulsory.
(iii) Section A – Questions no. 1 to 5 are multiple choice questions, carrying 1 mark each.
(iv) Section B – Questions no. 6 to 12 are short-answer questions type-I, carrying 2 marks each.
(v) Section C – Questions no. 13 to 21 are short-answer questions type-II, carrying 3 marks each.
(vi) Section D – Questions no. 22 to 24 are short-answer questions type-III, carrying 3 marks each.
(vii) Section E – Questions no. 25 to 27 are long-answer questions, carrying 5 marks each.
(viii) Answer should be brief and to the point.
(ix) There is no overall choice in the question paper. However, an internal choice has been provided in two questions of 1 mark, one question of 2 marks, two questions of 3 marks and three questions of 5 marks. Only one of the choices in such questions have to be attempted.
(x) The diagrams drawn should be neat, proportionate and properly labelled, wherever necessary.
(xi) In addition to this, separate instructions are given with each section and question, wherever necessary.

SECTION - A

1. ELISA technique is based on the principle of
   a) DNA replication
   b) antigen and antibody interaction.
   c) Pathogen and Antigen interaction
   d) Antigen and Protein interaction
2. Micropropagation can be achieved by
   a) Self-pollination
   b) Asexual reproduction
   c) Tissue culture
   d) Vegetative propagation

(OR)

The microbes commonly used in kitchens are
   a) Lactobacillus and Yeast
   b) Penicillium and Yeast
   c) Microspora and E.coli
   d) Rhizopus and Lactobacillus
3. Meselson & Stahl carried out centrifugation in CsCl₂ density gradient to separate.
   a) DNA from RNA
   b) DNA from protein
   c) The normal DNA from ¹⁵N-DNA
   d) DNA from tRNA
4. Self-pollination is fully ensured if
   a) the flower is bisexual
   b) the style is longer than the filament
c) The flower is cleistogamous

d) The time of pistil and another maturity is different

(OR)

Zoospores are the reproductive units to carry asexual reproduction in

a) Chlamdomonas
b) Spirogyra
c) Yeast
d) Rhizopus

5. The main barrier that prevents the entry of microorganism into body is

a) Antibodies
b) Macrophages
c) Monocytes
d) Skin

SECTION - B

6. Name the genus of baculovirus that acts as a biological control agent in spite of being a pathogen. Justify by giving three reasons that make it an excellent candidate for the job.

(OR)

“Micro-organisms play an important role for the biological treatment of sewage”. Justify.

7. It is often observed that the chances of a person suffering from measles in his or her lifetime are low if he or she has suffered from the disease in their early childhood. Justify the statement.

8. Wings of birds and wings of butterflies contribute to locomotion. Explain the type of evolution such organs are a result of.

9. How does an amoeba respond to unfavourable conditions, and on arrival of favourable conditions?

10. Where do the following events occur in the life-cycle of Plasmodium?

   a) Gametocyte development
   b) Sexual reproduction
   c) Asexual reproduction

11. How is the MOET programme carried out for hard improvement? Explain.

12. Given below is one of the strands of a DNA segment:

   a) Write its complementary strand
   b) Write a possible RNA strand that can be transcribed from the above DNA molecule formed.

13. Differentiate between nectarised and insect pollinated flowers. (Question paper had Typo error)

SECTION - C

14. Generally it is observed that human males suffer from hemophilia more than human females, who rarely suffer from it. Explain giving reasons.

(OR)

F₁ progeny of pea plant bearing violet flowers and snapdragon plant bearing red flowers were selfed to produce their respective F₂ progeny. Compare the phenotypes, the genotypes and the pattern of inheritance of their respective F₂ progeny.
15. Draw a schematic transverse section of a mature anther of an angiosperm. Label it epidermis, middle layers, tapetum, endothecium, sporogenous tissue and the connective.

16. Alien species invasion has been a threat to biodiversity. Justify with the help of a suitable example. List any other three causes responsible for such a loss.

17. Explain the changes that milk undergoes when suitable starter/inoculum is added to it. How does the end product formed prove to be beneficial for human health?

18. Name any two natural cloning vectors. Give reasons that make them act as cloning vectors. Write the two characteristics the engineered vectors are made to possess.

19. (a) Explain the principle on the basis of which DNA is separated by the technique of Gel electrophoresis.
   (b) How is the separated DNA visualized?

20. Study the table given below and identify a, b, c, d, e and f:

<table>
<thead>
<tr>
<th>Crops</th>
<th>Variety</th>
<th>Resistance to disease</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>Pusa sadabahar</td>
<td>B</td>
</tr>
<tr>
<td>c</td>
<td>d</td>
<td>White rust</td>
</tr>
<tr>
<td>e</td>
<td>Himgiri</td>
<td>F</td>
</tr>
</tbody>
</table>

(OR)

What is plant breeding? Explain the two steps involved in classical plant breeding.

21. What is the natural ageing of a lake called? How is it caused? Write the impact of uncontrolled human activities on it?

**SECTION – D**

22. The cytological observations made in a number of insects led to the development of the concept of genetic/chromosomal basis of sex-determination mechanism. Honey bee is an interesting example to study the mechanism of sex-determination. Study the schematic cross between the male and the female honey bees gives below and answer the question the follow:
a) Identify the cell division ‘A’ and ‘B’ that lead to respective gamete formation in female and male honey bees respectively.

b) Name the process ‘C’ that leads to the development of male honey bee (drone)

23. Study the age pyramids ‘A, ‘B’ and ‘C’ of the human population given below and answer the questions that follow:

a) Identify pyramids ‘B’ and ‘C’

b) Write the basis on which the above pyramids are plotted.

24. Insulin in the human body is secreted by pancreas as prohormone/proinsulin. The schematic polypeptide structure of proinsulin is given below. This proinsulin needs to undergo processing before it becomes functional in the body. Answer the question that follow:
a) State the change the proinsulin undergoes at the time of its processing to become functional.
b) Name the technique the American company Eli Lilly used for the commercial production of human insulin.
c) How are the two polypeptides of a functional insulin chemically held together?

SECTION – E

25. Describe the model of phosphorus cycle in the terrestrial ecosystem.

(OR)

Describe the DDT biomagnification occurring in an aquatic food chain. State the negative effects the process has on the organisms at the last trophic level of the food chain.

26. (a) Explain the process of DNA replication in Prokaryotes.
    (b) Write the phase in cell cycle where DNA replication occurs in a cell. What will happen if cell division fails to occur after DNA replication in a cell?

(OR)

State the hypothesis proposed by Oparin and Haldane.

Describe how S.I. Miller experimentally supported it.

27. (a) IVF is a very popular method these days that is helping childless couples to bear a child. Describe the different steps that are carried out in this technique.
    b) Would you consider Gamete Intrafallopian Transfer (GIFT) as an IVF? Given a reason in support of your answer.

(OR)

a) Draw a sectional view of a human ovary and label primary follicle, tertiary follicle, Graafian follicle and corpus luteum in it.
    b) Name the gonadotropins and explain their role in oogenesis and the release of ova.
