## 1. SYMMETRY AND REFLECTION

## Reflections through Ink plots

* Take a rectangular sheet of paper and fold it into half.
* Soak a thread with ink and place it inside the folded paper and pull the thread out.

In the same way do some more reflection designs and stick them in your notebook.

## Stick the Designs

B952

Take a white sheet and write the alphabet ' $B$ ' in bold letter using crayons. Fold and scratch it gently till the impression is formed on the other side. Open it and see.

Ok, Kamala, I will try with number 5.
Very interesting Kamala, shall we create many pictures like this and stick in our notebook and show to our teacher?

## Reflections through Mirror

Saranya: Teacher, is there any special name for these pictures?

Teacher: Yes, these are called Mirror images. These pictures are in mirror reflections.

Fathima: Teacher, I see a line between the two sides which divides the pictures equally on either side.

Teacher: Oh, that line is called "Mirror line symmetry".

Tick the mirror images.

## Line of symmetry

Cut a circular paper, fold it equally. A line divides it into two equal halves. This line is called 'line of symmetry', which means it is exactly the same on both sides of the line.

## Practice

Cut a rectangular paper, fold it equally. Draw a line on the folding and stick the paper in your notebook.

Check for symmetry.

* Trace two given figures in a small paper separately, fold it and check for the line of symmetry.
* In figure(1) you get a line of symmetry so that the two parts coincide exactly, figure(1) is symmetrical. In figure(2), two parts do not coincide, so figure (2) is not symmetrical.

Symmetry in geometrical shapes
Observe the following shapes:
A line of symmetry divides a figure into mirror-images. The dotted lines below are the line of symmetry. It divides the figure into two equal parts. Both the sides are symmetrical. These are called symmetrical shapes.

* Nowadays, children like to decorate their hands with tattoos.
* Many of the designs of tattoos are symmetrical.
* Some designs are given below.
* Stick some designs of your choice in your notebook.

## Visualize the symmetrical figures

Observe the pictures. They are very beautiful. Symmetry is maintained on the left and right side of the buildings.

唁

1) Complete the other side of the house and colour it.

2) Complete the other side of the clown and colour it.

(2)

(7)

(5)

(8)

(9)

Each figure is divided into two equal parts. Each part is called half. We write it as $\frac{1}{2}$

## Representation of fractions for the coloured part

1 means the whole. Here the whole part is coloured.

## Dividing the whole

Whole is divided into 2 equal parts. One part is coloured. The coloured part represents $\frac{1}{2}$

Whole is divided into 3 equal parts. One part is coloured. The coloured part represents $\frac{1}{3}$.

Whole is divided into 4 equal parts. One part is coloured. The coloured part represents $\frac{1}{4}$.

Whole is divided into 5 equal parts. One part is coloured. The coloured part represents $\frac{1}{5}$.

$$
\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5} \text { are called fractional numbers. }
$$

Fractions representing the coloured parts

The fraction part coloured in red $=\frac{2}{8}$
The fraction part coloured in green $=\frac{1}{8}$
The fraction part coloured in yellow $=\frac{3}{8}$

The fraction part coloured in violet $=\frac{2}{8}$

Representation of fractions for the uncoloured part

| :---: | :---: | :---: |
|  | $\frac{1}{2}$ | Half |
|  | $\frac{1}{3}$ | One-third |
|  | One-fourth |  |

The circle is divided into two, three, four, five, six, seven, eight and nine equal parts. One part is uncoloured. The fraction of the uncoloured parts are $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}, \frac{1}{6}, \frac{1}{7}, \frac{1}{8}$ and $\frac{1}{9}$ respectively.

The same portion of each rectangle is coloured. Green rectangle refers to $\frac{1}{2}$. Pink rectangle refers to $\frac{2}{4}$. Orange rectangle refers to $\frac{3}{6}$. Violet rectangle refers to $\frac{4}{8}$.

All the coloured rectangles are same in size.

$$
\frac{1}{2}=\frac{2}{4}=\frac{3}{6}=\frac{4}{8}
$$

$\frac{1}{2}, \frac{2}{4}, \frac{3}{6}, \frac{4}{8} \ldots$ are equivalent fractions.

## Let us frame equivalent fractions.

$$
\frac{1}{2}=\frac{1 \times 2}{2 \times 2}=\frac{2}{4} \quad \frac{1}{2}=\frac{1 \times 3}{2 \times 3}=\frac{3}{6} \quad \frac{1}{2}=\frac{1 \times 4}{2 \times 4}=\frac{4}{8}
