

Exercise 1.1

**1. Using appropriate properties find.**

(i)  $-2/3 \times 3/5 + 5/2 - 3/5 \times 1/6$

**Solution:**

$$\begin{aligned} & -2/3 \times 3/5 + 5/2 - 3/5 \times 1/6 \\ & = -2/3 \times 3/5 - 3/5 \times 1/6 + 5/2 && \text{(by commutativity)} \\ & = 3/5 (-2/3 - 1/6) + 5/2 \\ & = 3/5 ((-4 - 1)/6) + 5/2 \\ & = 3/5 ((-5)/6) + 5/2 && \text{(by distributivity)} \\ & = -15/30 + 5/2 \\ & = -1/2 + 5/2 \\ & = 4/2 \\ & = 2 \end{aligned}$$

(ii)  $2/5 \times (-3/7) - 1/6 \times 3/2 + 1/14 \times 2/5$

**Solution:**

$$\begin{aligned} & 2/5 \times (-3/7) - 1/6 \times 3/2 + 1/14 \times 2/5 \\ & = 2/5 \times (-3/7) + 1/14 \times 2/5 - (1/6 \times 3/2) && \text{(by commutativity)} \\ & = 2/5 \times (-3/7 + 1/14) - 3/12 \\ & = 2/5 \times ((-6 + 1)/14) - 3/12 \\ & = 2/5 \times ((-5)/14) - 1/4 \\ & = (-10/70) - 1/4 \\ & = -1/7 - 1/4 \\ & = (-4 - 7)/28 \\ & = -11/28 \end{aligned}$$

**2. Write the additive inverse of each of the following**

**Solution:**

(i)  $2/8$

Additive inverse of  $2/8$  is  $-2/8$

(ii)  $-5/9$

Additive inverse of  $-5/9$  is  $5/9$

(iii)  $-6/-5 = 6/5$

Additive inverse of  $6/5$  is  $-6/5$

(iv)  $2/-9 = -2/9$

Additive inverse of  $-2/9$  is  $2/9$

(v)  $19/-16 = -19/16$

Additive inverse of  $-19/16$  is  $19/16$

**3. Verify that:  $-(-x) = x$  for.**

(i)  $x = 11/15$

(ii)  $x = -13/17$

## NCERT Solution For Class 8 Maths Chapter 1- Rational Numbers

### Solution:

(i)  $x = 11/15$

We have,  $x = 11/15$

The additive inverse of  $x$  is  $-x$  (as  $x + (-x) = 0$ )

Then, the additive inverse of  $11/15$  is  $-11/15$  (as  $11/15 + (-11/15) = 0$ )

The same equality  $11/15 + (-11/15) = 0$ , shows that the additive inverse of  $-11/15$  is  $11/15$ .

Or,  $-(-11/15) = 11/15$

i.e.,  $-(-x) = x$

(ii)  $-13/17$

We have,  $x = -13/17$

The additive inverse of  $x$  is  $-x$  (as  $x + (-x) = 0$ )

Then, the additive inverse of  $-13/17$  is  $13/17$  (as  $-13/17 + 13/17 = 0$ )

The same equality  $(-13/17 + 13/17) = 0$ , shows that the additive inverse of  $13/17$  is  $-13/17$ .

Or,  $-(13/17) = -13/17$ ,

i.e.,  $-(-x) = x$

### 4. Find the multiplicative inverse of the

(i)  $-13$       (ii)  $-13/19$       (iii)  $1/5$       (iv)  $-5/8 \times (-3/7)$       (v)  $-1 \times (-2/5)$       (vi)  $-1$

### Solution:

(i)  $-13$

Multiplicative inverse of  $-13$  is  $-1/13$

(ii)  $-13/19$

Multiplicative inverse of  $-13/19$  is  $-19/13$

(iii)  $1/5$

Multiplicative inverse of  $1/5$  is  $5$

(iv)  $-5/8 \times (-3/7) = 15/56$

Multiplicative inverse of  $15/56$  is  $56/15$

(v)  $-1 \times (-2/5) = 2/5$

Multiplicative inverse of  $2/5$  is  $5/2$

(vi)  $-1$

Multiplicative inverse of  $-1$  is  $-1$

### 5. Name the property under multiplication used in each of the following.

(i)  $-4/5 \times 1 = 1 \times (-4/5) = -4/5$

(ii)  $-13/17 \times (-2/7) = -2/7 \times (-13/17)$

(iii)  $-19/29 \times 29/-19 = 1$

### Solution:

(i)  $-4/5 \times 1 = 1 \times (-4/5) = -4/5$

Here  $1$  is the multiplicative identity.

(ii)  $-13/17 \times (-2/7) = -2/7 \times (-13/17)$

The property of commutativity is used in the equation

(iii)  $-19/29 \times 29/-19 = 1$

Multiplicative inverse is the property used in this equation.

6. Multiply  $6/13$  by the reciprocal of  $-7/16$

**Solution:**

$$\text{Reciprocal of } -7/16 = 16/-7 = -16/7$$

According to the question,

$$6/13 \times (\text{Reciprocal of } -7/16)$$

$$6/13 \times (-16/7) = -96/91$$

7. Tell what property allows you to compute  $1/3 \times (6 \times 4/3)$  as  $(1/3 \times 6) \times 4/3$

**Solution:**

$$1/3 \times (6 \times 4/3) = (1/3 \times 6) \times 4/3$$

Here, the way in which factors are grouped in a multiplication problem, supposedly, does not change the product. Hence, the Associativity Property is used here.

8. Is  $8/9$  the multiplication inverse of  $1\frac{1}{8}$ ? Why or why not?

**Solution:**

$$1\frac{1}{8} = -7/8$$

[Multiplicative inverse  $\Rightarrow$  product should be 1]

According to the question,

$$8/9 \times (-7/8) = -7/9 \neq 1$$

Therefore,  $8/9$  is not the multiplicative inverse of  $1\frac{1}{8}$ .

9. If  $0.3$  the multiplicative inverse of  $3\frac{1}{3}$ ? Why or why not?

**Solution:**

$$3\frac{1}{3} = 10/3$$

$$0.3 = 3/10$$

[Multiplicative inverse  $\Rightarrow$  product should be 1]

According to the question,

$$3/10 \times 10/3 = 1$$

Therefore,  $0.3$  is the multiplicative inverse of  $3\frac{1}{3}$ .

10. Write

(i) The rational number that does not have a reciprocal.

(ii) The rational numbers that are equal to their reciprocals.

(iii) The rational number that is equal to its negative.

**Solution:**

(i) The rational number that does not have a reciprocal is 0. Reason:

$$0 = 0/1$$

Reciprocal of  $0 = 1/0$ , which is not defined.

(ii) The rational numbers that are equal to their reciprocals are 1 and -1.

Reason:

$$1 = 1/1$$

Reciprocal of  $1 = 1/1 = 1$  Similarly, Reciprocal of  $-1 = -1$

## NCERT Solution For Class 8 Maths Chapter 1- Rational Numbers

(iii) The rational number that is equal to its negative is 0.

Reason:

Negative of  $0 = -0 = 0$

**11. Fill in the blanks.**

(i) Zero has \_\_\_\_\_ reciprocal.

(ii) The numbers \_\_\_\_\_ and \_\_\_\_\_ are their own reciprocals

(iii) The reciprocal of - 5 is \_\_\_\_\_.

(iv) Reciprocal of  $1/x$ , where  $x \neq 0$  is \_\_\_\_\_.

(v) The product of two rational numbers is always a \_\_\_\_\_.

(vi) The reciprocal of a positive rational number is \_\_\_\_\_.

**Solution:**

(i) Zero has no reciprocal.

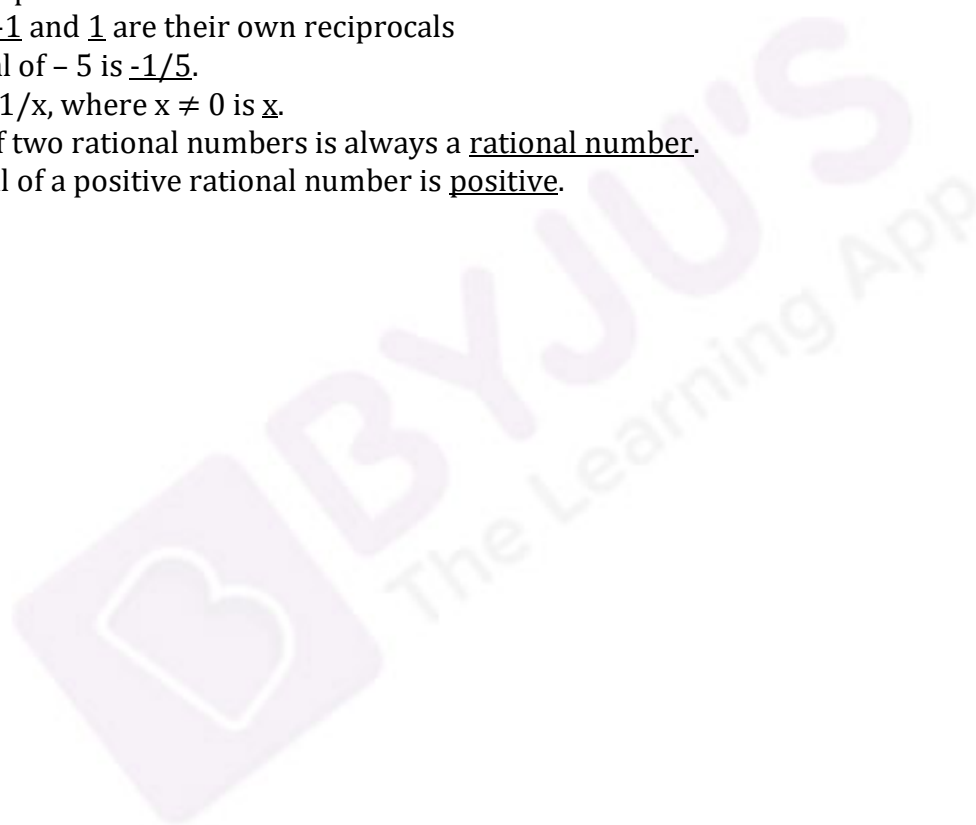

(ii) The numbers -1 and 1 are their own reciprocals

(iii) The reciprocal of - 5 is -1/5.

(iv) Reciprocal of  $1/x$ , where  $x \neq 0$  is  $x$ .

(v) The product of two rational numbers is always a rational number.

(vi) The reciprocal of a positive rational number is positive.

Exercise 1.2

Page: 20

1. Represent these numbers on the number line.

(i)  $\frac{7}{4}$

(ii)  $-\frac{5}{6}$

**Solution:**

(i)  $\frac{7}{4}$

Divide the line between the whole numbers into 4 parts. i.e., divide the line between 0 and 1 to 4 parts, 1 and 2 to 4 parts and so on.

Thus, the rational number  $\frac{7}{4}$  lies at a distance of 7 points away from 0 towards positive number line.

(ii)  $-\frac{5}{6}$

Divide the line between the integers into 6 parts. i.e., divide the line between 0 and -1 to 6 parts, -1 and -2 to 6 parts and so on. Here since the numerator is less than denominator, dividing 0 to -1 into 6 part is sufficient.

Thus, the rational number  $-\frac{5}{6}$  lies at a distance of 5 points, away from 0, towards negative number line

2. Represent  $-\frac{2}{11}$ ,  $-\frac{5}{11}$ ,  $-\frac{9}{11}$  on a number line.

**Solution:**

Divide the line between the integers into 11 parts.

Thus, the rational numbers  $-\frac{2}{11}$ ,  $-\frac{5}{11}$ ,  $-\frac{9}{11}$  lies at a distance of 2, 5, 9 points away from 0, towards negative number line respectively.

## NCERT Solution For Class 8 Maths Chapter 1- Rational Numbers

**3. Write five rational numbers which are smaller than 2.**

**Solution:**

The number 2 can be written as  $\frac{20}{10}$

Hence, we can say that, the five rational numbers which are smaller than 2 are:

$\frac{2}{10}, \frac{5}{10}, \frac{10}{10}, \frac{15}{10}, \frac{19}{10}$

**4. Find the rational numbers between  $-\frac{2}{5}$  and  $\frac{1}{2}$ .**

**Solution:**

Let us make the denominators same, say 50.

$$-\frac{2}{5} = \frac{-2 \times 10}{5 \times 10} = -\frac{20}{50}$$

$$\frac{1}{2} = \frac{1 \times 25}{2 \times 25} = \frac{25}{50}$$

Ten rational numbers between  $-\frac{2}{5}$  and  $\frac{1}{2}$  = ten rational numbers between  $-\frac{20}{50}$  and  $\frac{25}{50}$

Therefore, ten rational numbers between  $-\frac{20}{50}$  and  $\frac{25}{50}$  =  $-\frac{18}{50}, -\frac{15}{50}, -\frac{5}{50}, -\frac{2}{50}, \frac{4}{50}, \frac{5}{50}, \frac{8}{50}, \frac{12}{50}, \frac{15}{50}, \frac{20}{50}$

**5. Find five rational numbers between.**

(i)  $\frac{2}{3}$  and  $\frac{4}{5}$

(ii)  $-\frac{3}{2}$  and  $\frac{5}{3}$

(iii)  $\frac{1}{4}$  and  $\frac{1}{2}$

**Solution:**

(i)  $\frac{2}{3}$  and  $\frac{4}{5}$

Let us make the denominators same, say 60

i.e.,  $\frac{2}{3}$  and  $\frac{4}{5}$  can be written as:

$$\frac{2}{3} = \frac{2 \times 20}{3 \times 20} = \frac{40}{60}$$

$$\frac{4}{5} = \frac{4 \times 12}{5 \times 12} = \frac{48}{60}$$

Five rational numbers between  $\frac{2}{3}$  and  $\frac{4}{5}$  = five rational numbers between  $\frac{40}{60}$  and  $\frac{48}{60}$

Therefore, Five rational numbers between  $\frac{40}{60}$  and  $\frac{48}{60}$  =  $\frac{41}{60}, \frac{42}{60}, \frac{43}{60}, \frac{44}{60}, \frac{45}{60}$

(ii)  $-\frac{3}{2}$  and  $\frac{5}{3}$

Let us make the denominators same, say 6

i.e.,  $-\frac{3}{2}$  and  $\frac{5}{3}$  can be written as:

$$-\frac{3}{2} = \frac{-3 \times 3}{2 \times 3} = -\frac{9}{6}$$

$$\frac{5}{3} = \frac{5 \times 2}{3 \times 2} = \frac{10}{6}$$

Five rational numbers between  $-\frac{3}{2}$  and  $\frac{5}{3}$  = five rational numbers between  $-\frac{9}{6}$  and  $\frac{10}{6}$

## NCERT Solution For Class 8 Maths Chapter 1- Rational Numbers

Therefore, Five rational numbers between  $-9/6$  and  $10/6 = -1/6, 2/6, 3/6, 4/6, 5/6$

(iii)  $1/4$  and  $1/2$

Let us make the denominators same, say 24.

i.e.,  $1/4$  and  $1/2$  can be written as:

$$1/4 = (1 \times 6)/(4 \times 6) = 6/24$$

$$1/2 = (1 \times 12)/(2 \times 12) = 12/24$$

Five rational numbers between  $1/4$  and  $1/2 =$  five rational numbers between  $6/24$  and  $12/24$

Therefore, Five rational numbers between  $6/24$  and  $12/24 = 7/24, 8/24, 9/24, 10/24, 11/24$

**6. Write five rational numbers greater than -2.**

**Solution:**

-2 can be written as  $-20/10$

Hence, we can say that, the five rational numbers greater than -2 are

$-10/10, -5/10, -1/10, 5/10, 7/10$

**7. Find ten rational numbers between  $3/5$  and  $3/4$ ,**

**Solution:**

Let us make the denominators same, say 80.

$$3/5 = (3 \times 16)/(5 \times 16) = 48/80$$

$$3/4 = (3 \times 20)/(4 \times 20) = 60/80$$

Ten rational numbers between  $3/5$  and  $3/4 =$  ten rational numbers between  $48/80$  and  $60/80$

Therefore, ten rational numbers between  $48/80$  and  $60/80 = 49/80, 50/80, 51/80, 52/80, 54/80, 55/80, 56/80, 57/80, 58/80, 59/80$
