Secondary School Compartmental Examination July 2019
Marking Scheme
SCIENCE (SUBJECT CODE 086)
(PAPER CODE – 31/1/2)

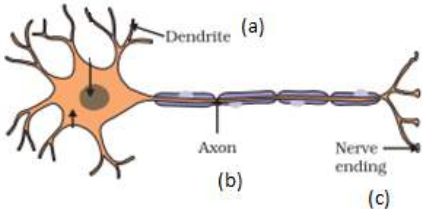

General Instructions: -

1. You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully. **Evaluation is a 10-12 days mission for all of us. Hence, it is necessary that you put in your best efforts in this process.**
2. Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. **However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and marks be awarded to them.**
3. The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
4. Evaluators will mark (✓) wherever answer is correct. For wrong answer 'X' be marked. Evaluators will not put right kind of mark while evaluating which gives an impression that answer is correct and no marks are awarded. This is most common mistake which evaluators are committing.
5. If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.
6. If a question does not have any parts, marks must be awarded in the left hand margin and encircled. This may also be followed strictly
7. If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out.
8. No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
9. A full scale of marks 0-80 has to be used. Please do not hesitate to award full marks if the answer deserves it.
10. Every examiner has to necessarily do evaluation work for full working hours i.e. 8 hours every day and evaluate 20 / 25 answer books per day.
11. Ensure that you do not make the following common types of errors committed by the Examiner in the past:-
 - Leaving answer or part thereof unassessed in an answer book.
 - Giving more marks for an answer than assigned to it.
 - Wrong transfer of marks from the inside pages of the answer book to the title page.
 - Wrong question wise totaling on the title page.
 - Wrong totaling of marks of the two columns on the title page.
 - Wrong grand total.
 - Marks in words and figures not tallying.
 - Wrong transfer of marks from the answer book to online award list.
 - Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.)
 - Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
12. While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as (X) and awarded zero (0) Marks.
13. Any unassessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.

14. The Examiners should acquaint themselves with the guidelines given in the Guidelines for spot Evaluation before starting the actual evaluation.
15. Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
16. The Board permits candidates to obtain photocopy of the Answer Book on request in an RTI application and also separately as a part of the re-evaluation process on payment of the processing charges.

MARKING SCHEME (COMPARTMENTAL) 2019
SET: 31/1/2

Q. NO.	VALUE POINTS/ EXPECTED ANSWERS	VALUE	TOTAL MARKS
SECTION – ‘A’			
1.	Inner lining of the stomach will not be protected from the action of HCl released by gastric glands	1	1
2.	Two Advantages: 1. It does not evaporate 2. It remains protected from contamination <i>(Or any other)</i>	½ ½	1
SECTION – ‘B’			
3.	Water of crystallization is the fixed number of water molecules present in one formula unit of a salt. Hydrated copper sulphate – $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ / Gypsum $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$	1 ½ + ½	2
4	Testes : These are the primary sex organs in human males. Two functions 1. To produce the male gametes(sperms) 2. To secrete male sex hormone / Testosterone	1 ½ ½	2
5	Medium having higher refractive index will have less speed of light. $n_{21} = \frac{\text{speed of light in medium 1}}{\text{speed of light in medium 2}}$ $n_{21} = \frac{v_1}{v_2}$ OR $n_{yx} = \frac{\text{speed of light in x}}{\text{speed of light in y}}$ $n_{yx} = \frac{v_x}{v_y} = 1.6$ $n_{x,\text{air}} = \frac{c}{v_x} = 1.5$ $v_x = \frac{3 \times 10^8}{1.5} \text{ m/s} = 2 \times 10^8 \text{ m/s}$ $v_y = \frac{2 \times 10^8}{1.6} \text{ m/s} = 1.25 \times 10^8 \text{ m/s}$	1 1 ½ ½ 1	2
SECTION – ‘C’			
6	a) (i) Silver articles react with sulphur present in the form of gases in air . Corrosion (ii) Silver Sulphide Ag ₂ S b) (i) Ca ₃ (PO ₄) ₂ (ii) (NH ₄) ₂ CO ₃	½ ½ ½ ½ ½ ½	3

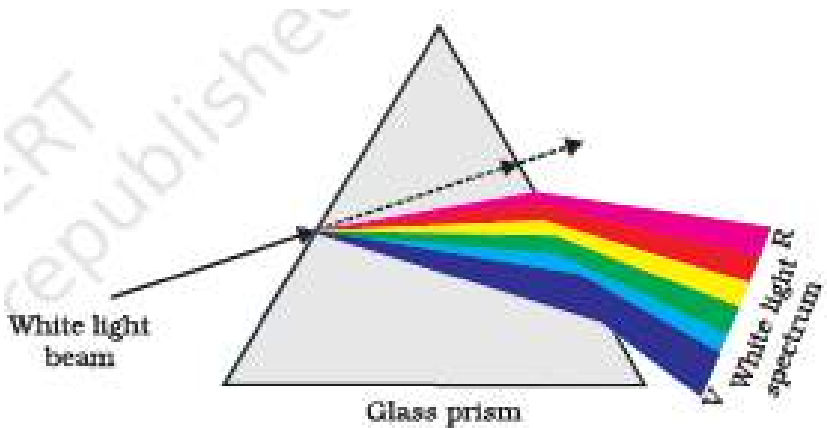

7	<p>a) Lithium has larger atomic radius compared to nitrogen, Reason : Along a period from left to right, there is an increase in nuclear charge which tends to pull the electrons closer to the nucleus. So, size of the atom of the elements decreases from Lithium to Nitrogen.</p> <p>b) Chlorine is more electronegative than potassium. Reason : Chlorine is smaller in size. So it has tendency to pull bonded electrons towards itself.</p> <p>c) Magnesium and Calcium have same valency. Reason : Both have the same number of valence electrons, i.e. 2.</p>	<p>½ ½</p> <p>½ ½</p> <p>½ ½</p>	3
8	<p>a) pH scale measures the hydrogen ion concentration in a solution thus indicating acidic/basic nature of a solution.</p> <p>b) From 0 to 14</p> <p>c) Significance : Highest value - very basic/alkaline solution. Lowest value - very acidic solution.</p> <p style="text-align: center;">OR</p> <p>a) The products formed are ‘chlor’ for chlorine and ‘alkali’ for sodium hydroxide.</p> $2 \text{NaCl (aq)} + 2 \text{H}_2\text{O (l)} \rightarrow 2\text{NaOH (aq)} + \text{Cl}_2 \text{ (g)} + \text{H}_2 \text{ (g)}$ <p>b) Two observations : i) Water droplets in the boiling tube. ii) Change in colour from blue to white.</p>	<p>1</p> <p>1</p> <p>½ ½</p> <p>1</p> <p>1</p> <p>½ ½</p>	3
9	<p>Biomass: The waste materials produced by plants and animals from which energy can be obtained on a renewal basis.</p> <p>Principle : Anaerobic decomposition of biomass.</p> <p>Main combustible substance : Methane / CH₄</p> <p>Percentage : 75%</p>	<p>1</p> <p>1</p> <p>½</p> <p>½</p>	3
10	<p>a) Energy keeps decreasing at every trophic level. Because the loss of energy at each trophic level is so great that very little usable energy remains after 3-4 trophic levels.</p> <p>b) Pesticides/harmful chemicals from the soil/water bodies are absorbed by the plants along with water and minerals. As these harmful chemicals are non-biodegradable, They get accumulated/magnified at each trophic level in a food chain.</p>	<p>½ 1</p> <p>½</p> <p>½ ½</p>	3
11	<p>Diagram : Structure of a neuron</p>  <p>a) End of the dendritic tip b) Axon c) Nerve ending</p>	<p>1 ½</p> <p>½ ½ ½</p>	

	OR		
	a) Gibberellins help in the growth of the stem. b) Auxins help the cells to grow longer. c) Abscisic acid inhibits growth.	1 1 1	3
12	a) Excretion : A process of removal of waste materials from the body. Toxic / Nitrogenous waste matter / harmful material is to be removed from the body. b) Kidney Urine or Liquid form.	1 1 ½ ½	3
13	Focal length, $f = +20$ cm, Image distance, $v = +30$ cm, Object distance, $u = ?$ (values of u , v and f with proper sign) $\frac{1}{f} = \frac{1}{v} - \frac{1}{u}$ $\frac{1}{20} = \frac{1}{30} - \frac{1}{u}$ $\frac{1}{u} = \frac{1}{30} - \frac{1}{20}$ $\frac{1}{u} = \frac{2-3}{60} = \frac{-1}{60}$ $u = -60 \text{ cm}$ Size of the image = $-\frac{30 \text{ cm}}{60 \text{ cm}} \times 4 \text{ cm} = -2.0 \text{ cm}$ OR Magnification, $m = +2$, Focal length, $f = -20$ cm (with proper sign) Magnification = $-\frac{v}{u}$ $2 = -\frac{v}{u}$ $v = -2u$ $\frac{1}{f} = \frac{1}{v} + \frac{1}{u} \quad \text{[Mirror Formula]}$ $\frac{1}{-20} = \left[\frac{1}{-2} + \frac{1}{1} \right] \frac{1}{u}$ $\frac{2}{-20} = \frac{1}{u}$ $u = -10 \text{ cm}$ (The object should be placed at a distance of 10 cm in front of concave mirror.)	½ ½ 1 ½ ½ ½ ½ ½ 1	3
14	a) $X_1 = 4 \Omega + 2\Omega = 6 \Omega$		

	$X_2 = 3\Omega + 3\Omega = 6\Omega$ <p>Total resistance $R = \frac{X_1 X_2}{X_1 + X_2} = \frac{6 \times 6}{6 + 6} \Omega = 3\Omega$</p> <p>b) Current through ammeter $I = \frac{V}{R} = \frac{6V}{3\Omega} = 2A$</p> <p>c) Current through each arm = 1A (since $X_1 = X_2$)</p> <p>P.D. across $3\Omega = 1A \times 3\Omega = 3V$</p> <p>P.D. across $4\Omega = 1A \times 4\Omega = 4V$</p>	1	
		1	
		$\frac{1}{2}$	
		$\frac{1}{2}$	3

15	a) Due to high melting point/high resistance.	1	
	b) In series arrangement, same current will flow through all the appliances which is not required as every appliance needs current of different values. / If one component fails, the circuit is broken and none of the components works.	1	
	c) Good conductors of electricity/ Have low value of resistivity/ Less loss during transmission. (any one)	1	3

SECTION – ‘D’

16	a) Ciliary muscles relax and contract to adjust/modify the focal length of eye lens.	1											
	b) Eye Defects and corrective measures:												
	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">EYE DEFECTS</th> <th style="text-align: center;">CORRECTIVE MEASURES</th> </tr> </thead> <tbody> <tr> <td>i. Cataract</td> <td>Operation/Surgery</td> </tr> <tr> <td>ii. Myopia</td> <td>Suitable concave lens</td> </tr> <tr> <td>iii. Hypermetropia</td> <td>Suitable convex lens</td> </tr> <tr> <td>iv. Presbyopia</td> <td>Suitable bifocal lens</td> </tr> </tbody> </table>	EYE DEFECTS	CORRECTIVE MEASURES	i. Cataract	Operation/Surgery	ii. Myopia	Suitable concave lens	iii. Hypermetropia	Suitable convex lens	iv. Presbyopia	Suitable bifocal lens	$\frac{1}{2} + \frac{1}{2}$	
EYE DEFECTS	CORRECTIVE MEASURES												
i. Cataract	Operation/Surgery												
ii. Myopia	Suitable concave lens												
iii. Hypermetropia	Suitable convex lens												
iv. Presbyopia	Suitable bifocal lens												
	OR												
	a) Issac Newton was the first to use a glass prism to obtain the spectrum of white light. He tried to split various colours of the spectrum of white light by using another similar prism, he could not get any more colours. Thus, he proved that sunlight is made of seven colours.	2											
	 <p style="text-align: center;">Glass prism</p>	1											
	b) Atmospheric Refraction: It is the refraction of light by the earth's atmospheric layers having varying refractive indices.	1											

	<p>Two natural phenomena: i) Twinkling of stars, ii) Advanced sunrise and delayed sunset</p>	$2 \times \frac{1}{2}$	5
17	<div data-bbox="427 241 911 589" data-label="Image"> </div> <ul style="list-style-type: none"> • Direction of magnetic field line in the diagram <p>a)</p> <ul style="list-style-type: none"> • Take a card board piece and insert a thick copper wire to pass through its center and complete the circuit as shown in the diagram. • Sprinkle some iron filings on the cardboard. • Pass the current through the wire and tap the cardboard to obtain the concentric circles of iron filings around the conductor . <p>b) Right hand thumb rule : Imagine that your are holding a current carrying straight conductor in your right hand such that the thumb points towards the direction of current, then your fingers will wrap around the conductor in the direction of field lines of the magnetic fields.</p> <p>To determine the direction of magnetic field : Suppose current in a straight conductor is flowing from east to west then applying the right hand thumb rule we get the direction of magnetic field at a point below the wire (conductor) is from north to south. The direction of magnetic field at a point above the conductor is from south to north.</p>	<p style="text-align: center;">1</p> <p style="text-align: center;">$\frac{1}{2}$</p> <p style="text-align: center;">$\frac{1}{2}$</p> <p style="text-align: center;">$\frac{1}{2}$</p> <p style="text-align: center;">$\frac{1}{2}$</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p>	5
18	<p>a) Electron - dot structure of Methane</p> <div data-bbox="552 1375 772 1594" data-label="Chemical-Block"> </div> <p>b) i) Alcohol / - OH ii) Aldehyde / - CHO</p> <p>c) Due to incomplete combustion in air, high temperature required for welding is not achieved. Due to excessive soot formation, welding is hampered.</p> <p style="text-align: center;">OR</p> <p>a) i)</p> <div data-bbox="236 1957 884 2040" data-label="Chemical-Block"> $\text{CH}_3\text{CH}_2\text{OH} \xrightarrow[\text{or Acidified K}_2\text{Cr}_2\text{O}_7 + \text{heat}]{\text{Alkaline KMnO}_4 + \text{heat}} \text{CH}_3\text{COOH}$ </div>	<p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p>

(either of the three)</p>	<p>1</p> <p>1</p> <p>1</p> <p>1</p>	<p>5</p>						
<p>19</p>	<p>a) Copper (Cu) and Mercury (Hg)</p> <p>b)</p> <table border="1" data-bbox="140 815 1214 987"> <thead> <tr> <th data-bbox="140 815 683 853">CALCINATION</th> <th data-bbox="683 815 1214 853">ROASTING</th> </tr> </thead> <tbody> <tr> <td data-bbox="140 853 683 920">Zinc carbonate is heated in limited supply of air</td> <td data-bbox="683 853 1214 920">Zinc sulphide is heated in excess of air.</td> </tr> <tr> <td data-bbox="140 920 683 987">$ZnCO_3 \xrightarrow{\Delta} ZnO + CO_2$</td> <td data-bbox="683 920 1214 987">$2ZnS + 3O_2 \xrightarrow{\Delta} 2ZnO + 2SO_2$</td> </tr> </tbody> </table> <p>c) Thermit reaction between iron (III) oxide and aluminium powder/ $Fe_2O_3 (s) + 2Al (s) \rightarrow 2Fe (l) + Al_2O_3 (s) + \text{heat}$</p> <p>Significance:</p> <ul style="list-style-type: none"> It is a highly exothermic reaction. Iron is obtained in molten form. 	CALCINATION	ROASTING	Zinc carbonate is heated in limited supply of air	Zinc sulphide is heated in excess of air.	$ZnCO_3 \xrightarrow{\Delta} ZnO + CO_2$	$2ZnS + 3O_2 \xrightarrow{\Delta} 2ZnO + 2SO_2$	<p>1/2 + 1/2</p> <p>1/2 + 1/2</p> <p>1/2 + 1/2</p> <p>1</p> <p>1/2</p> <p>1/2</p>	<p>5</p>
CALCINATION	ROASTING								
Zinc carbonate is heated in limited supply of air	Zinc sulphide is heated in excess of air.								
$ZnCO_3 \xrightarrow{\Delta} ZnO + CO_2$	$2ZnS + 3O_2 \xrightarrow{\Delta} 2ZnO + 2SO_2$								
<p>20</p>	<p>a) Mode of asexual reproduction in Amoeba and Leishmania is Binary Fission.</p> <p>In Amoeba, during division splitting of the two cells can take place in any plane.</p> <p>In Leishmania, binary fission occurs in a definite orientation in relation to the whip like structures present at one end of the cell.</p> <p>b) Regeneration is a process in which an organism is broken/ cut into pieces, these pieces may grow into separate individuals.</p> <p>Diagram :</p>  <p>c) Spores are formed in Sporangia. Spores grow into a new individual under moist conditions.</p>	<p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1</p> <p>1 1/2</p> <p>1/2</p> <p>1/2</p>	<p>5</p>						

	OR		
	<p>a) Two bacterial infections :</p> <p>i) Gonorrhoea</p> <p>ii) Syphilis</p> <p>Prevention: Using a covering called condom, for the penis, during sex helps in prevention of such infections.</p> <p>b) i) By changing hormonal balance using contraceptive pills/oral pills. ii) Contraceptive devices like loop or Copper – T. iii) Surgical methods like blocking fallopian tubes or vas deferens.</p> <p>c) i) The health of women will not be affected adversely if she adopts contraceptive measures. ii) Maintain gap between two pregnancies/children. iii) To prevent sexually transmitted diseases (STDs)</p>	<p>½</p> <p>½</p> <p>1</p> <p>½</p> <p>½</p> <p>½</p> <p>½</p> <p>½</p> <p>½</p>	5
21	<p>a) Reasons in favour of Mendel’s choice of Pea Plant.</p> <p>i) Flowers in pea plant are bisexual.</p> <p>ii) It has a short life span.</p> <p>iii) Pea plant has a number of visible contrasting characters.</p> <p>iv) The flower easily undergo self pollination. <i>(any two)</i></p> <p>b)</p> <ul style="list-style-type: none"> • The geographical isolation of individuals of a species over generations leads to genetic drift. • Limitation of sexual reproduction of the separated population. Gradually the separated individuals will reproduce among themselves and generate new variation. • Continuous accumulation of these variations through a few generations leads to the formation of a new species. 	<p>1+1</p> <p>1</p> <p>1</p> <p>1</p>	5
SECTION – ‘E’			
22	<ul style="list-style-type: none"> • Rays no. 2, 3 and 4 follow the laws of refraction of light. <ul style="list-style-type: none"> • This ray diagram is drawn using ray no. 2 and 3. (A candidate can select any two correct rays out of the three. He should use two chosen rays while drawing the ray diagram.) <p style="text-align: center;">OR</p> <p>i) Select a suitable distant object. ii) Hold the lens between the object and the screen with its face parallel to the screen. iii) Adjust the position of the lens to form a sharp image. iv) Measure the distance between the lens and the screen which is the approximate focal length of the lens.</p>	<p>1</p> <p>1</p> <p>$4 \times \frac{1}{2}$</p>	2
23	<p>a) Least count of ammeter = $\frac{0.5}{10} = 0.05 \text{ A}$</p>		

	Thus, value corresponding to 12 divisions = $0.05 \times 12 = 0.6 \text{ A}$	1	
	b) An ammeter is connected in series and a voltmeter is connected in parallel in an electric circuit.	1	2
24	a) In test tube (II) as copper is less reactive than iron, so cannot displace Fe from its salt solution.	1	
	b) In test tubes (III) & (IV) both, because they both, i.e. Zn and Al are more reactive than Fe and will displace Fe from FeSO_4	1	2
25	a) Y, X, Z	1	
	b) Z, because it is basic in nature and the bases turn phenolphthalein pink.	$\frac{1}{2} + \frac{1}{2}$	
	OR		
	i) Observation: The moist blue litmus paper will turn red. Inference: The gas liberated is acidic in nature.	$\frac{1}{2}$ $\frac{1}{2}$	
	ii) Observation: Wet red litmus paper will remain red. Inference: The gas liberated is acidic in nature.	$\frac{1}{2}$ $\frac{1}{2}$	2
26	a) X- KOH pellets, Y - Wet germinating seeds	$\frac{1}{2}$ $\frac{1}{2}$	
	b) Seeds use oxygen present in the flask and release carbon dioxide which is absorbed by potassium hydroxide. Thus, partial vacuum is created in the conical flask, as a result water from the beaker rises in the delivery tube.	1	2
27	Steps involved in germinating dicot seeds: 1. Select healthy dicot seeds say channa or any other dicot seed. 2. Put the seeds in petridish and soak them in water. 3. Keep them overnight, drain excess water. 4. Leave them and observe.	$\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$	
	OR		
	Stomata A. Guard Cell B. Chloroplast C. Stoma	$\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$	2
