23 Minerals are an indispensable part of our lives:

i. Almost everything we use, from a tiny pin to a towering building or a big shop, all are made from minerals.

ii. The railway lines and the tarmac (paving) of the roads, our implements and machinery too are made from minerals.

iii. Cars, buses, trains, aero planes are manufactured from minerals and run on power recourses derived from the earth.

iv. Even the food that we eat contains minerals.

v. In all stages of development, human beings have used minerals for their livelihood, decoration, festivities, religious and ceremonial rites.

vi. Any other relevant point. Any three points to be explained.

OR

Occurrence of Minerals:

i. In igneous and metamorphic rocks minerals may occur in the cracks, crevices, faults or joints. The smaller occurrences are called veins and the larger are called lodes.

ii. In most cases, they are formed when minerals in liquid/molten and gaseous forms are forced upward through cavities towards the earth’s surface. They cool and solidify as they rise. Major metallic minerals like tin, copper, zinc and lead etc. are obtained from veins and lodes.

iii. In sedimentary rocks a number of minerals occur in beds or layers. They have been formed as a result of deposition,
accumulation and concentration in horizontal strata. For example gypsum, potash salt and sodium salt. These are formed as a result of evaporation especially in arid regions.

iv. Another mode of formation involves the decomposition of surface rocks and the removal of soluble constituents, leaving a residual mass of weathered material containing ores. Bauxite is formed this way.

v. Certain minerals may occur as alluvial in sands of valley floors and the base of hills. These deposits are called 'placer deposits' and generally contain minerals, which are not corroded by water, Gold, silver, tin and platinum are most important among such minerals.
