## JEE Advanced 2020 Physics | Paper-1 | Code-E

SECTION 1 (Maximum Marks: 18)

- This section contains SIX (06) questions.
- Each question has FOUR options. ONLY ONE of these four options is the correct answer.
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme: Full Marks : +3 If ONLY the correct option is chosen;
Zero Marks : 0 If none of the options is chosen (i.e. the questions is unanswered);
Negative Marks : -1 In all other cases.

1. A football of radius $R$ is kept on a hole of radius $r(r<R)$ made on a plank kept horizontally. One end of the plank is now lifted so that it gets tilted making an angle $\theta$ from the horizontal as shown in the figure below. The maximum value of $\theta$ so that the football does not start rolling down the plank satisfies (figure is schematic and not drawn to scale)

(A) $\sin \theta=\frac{r}{R}$
(B) $\tan \theta=\frac{\mathrm{r}}{\mathrm{R}}$
(C) $\sin \theta=\frac{r}{2 R}$
(D) $\cos \theta=\frac{r}{2 R}$

Answer: A

## JEE Advanced 2020 | Paper-1 | Code-E

Solution:
Draw free body diagram, where the normal reaction will act on point of contact. So,

In the limiting case mg will act along normal reaction. For $\theta_{\max }$, the football is about to roll, then $\mathrm{N}_{2}=0$ and all the forces ( mg and $\mathrm{N}_{1}$ ) must pass through contact point. So,

$$
\begin{aligned}
& \therefore \sin \theta_{\max }=\frac{\text { Perpendicular }}{\text { Hypotenuse }} \\
& \Rightarrow \sin \theta_{\max }=\frac{\mathrm{r}}{\mathrm{R}}
\end{aligned}
$$

## JEE Advanced 2020 | Paper-1 | Code-E

2. A light disc made of aluminium (a nonmagnetic material) is kept horizontally and is free to rotate about its axis as shown in the figure. A strong magnet is held vertically at a point above the disc away from its axis. On revolving the magnet about the axis of the disc, the disc will (figure is schematic and not drawn to scale)

(A) rotate in the direction opposite to the direction of magnet's motion
(B) rotate in the same direction as the direction of magnet's motion
(C) not rotate and its temperature will remain unchanged
(D) not rotate but its temperature will slowly rise

Answer: B
Solution:

By Lenz's law, the disc also tries to move in same direction because in the backward part of disc the flux reduces as magnet moves and as there is change in magnetic flux, so there is eddy current production which leads to production of heat. These currents are such that it opposes the relative motion. So, disc will rotate in the direction of rotation of magnet.

## JEE Advanced 2020 | Paper-1 | Code-E

3. A small roller of diameter 20 cm has an axle of diameter 10 cm (see figure below on the left). It is on a horizontal floor and a meter scale is positioned horizontally on its axle with one edge of the scale on top of the axle (see figure on the right). The scale is now pushed slowly on the axle so that it moves without slipping on the axle, and the roller starts rolling without slipping. After the roller has moved 50 cm , the position of the scale will look like (figures are schematic and not drawn to scale)

$$
x=0 \quad x=25 \mathrm{~cm}
$$

(C)

(D)

## JEE Advanced 2020 | Paper-1 | Code-E

Answer: B
Solution:
$\because$ In this case pure rolling without slipping,

Let radius of roller is $R$ and radius of axle is $r$.

$\because$ As we know, $\mathrm{v}=\omega \mathrm{r}$
Now from the figure,
$v-\omega R=0$
$\mathrm{v}=\omega \mathrm{R}$

$$
v=10 \omega \Rightarrow \omega=\frac{v}{10}
$$

$\because$ Radius $=\frac{\text { Diameter }}{2}$
Velocity of point $(A)=v+\omega r$
Now, put the values of $\omega$ and r ,

$$
\begin{aligned}
& =v+\frac{\mathrm{v}}{10} \times 5 \\
& =\frac{3 \mathrm{v}}{2}=1.5 \mathrm{v}
\end{aligned}
$$

So distance moved by point of contact
$=1.5 \times 50 \mathrm{~cm}=75 \mathrm{~cm}$

## JEE Advanced 2020 | Paper-1 | Code-E

4. A circular coil of radius $R$ and $N$ turns has negligible resistance. As shown in the schematic figure, its two ends are connected to two wires and it is hanging by those wires with its plane being vertical. The wires are connected to a capacitor with charge $Q$ through a switch. The coil is in a horizontal uniform magnetic field $B_{0}$ parallel to the plane of the coil. When the switch is closed, the capacitor gets discharged through the coil in a very short time. By the time the capacitor is discharged fully, magnitude of the angular momentum gained by the coil will be (assume that the discharge time is so short that the coil has hardly rotated during this time)

(A) $\frac{\pi}{2} \mathrm{NQB}_{0} \mathrm{R}^{2}$
(B) $\pi N Q B_{o} R^{2}$
(C) $2 \pi N Q B_{o} R^{2}$
(D) $4 \pi N Q B_{o} R^{2}$

Answer: B

# JEE Advanced 2020 | Paper-1 | Code-E 

Solution:

After closing switch, within fraction of seconds entire charge flows through coil and produces impulsive torque.

Now, change in Angular momentum $\Rightarrow$

$$
\begin{equation*}
\int \tau \mathrm{dt}=\Delta \mathrm{L} \tag{1}
\end{equation*}
$$

$\because \vec{\tau}=\overrightarrow{\mathrm{M}} \times \overrightarrow{\mathrm{B}}$
Where, $\overrightarrow{\mathrm{M}}=$ Magnetic moment

$$
\begin{aligned}
& \overrightarrow{\mathrm{B}}=\text { Magnetic field } \\
& \overrightarrow{\mathrm{M}}=\mathrm{Ni}\left(\pi \mathrm{R}^{2}\right)
\end{aligned}
$$

$\because \tau=M B \sin 90^{\circ} \Rightarrow M B \Rightarrow\left(N i \pi R^{2}\right) B_{o}$
$\because \sin 90^{\circ}=1$
Put all the values in equation (1),
$\int \mathrm{Ni} \pi \mathrm{R}^{2} \mathrm{~B}_{0} \mathrm{dt}=\Delta \mathrm{L}$
$\Rightarrow \mathrm{N} \pi \mathrm{R}^{2} \mathrm{~B}_{0} \int \mathrm{idt}=\Delta \mathrm{L}$
According to question $\int \mathrm{idt}=\mathrm{Q}$
$\Rightarrow \mathrm{N} \pi \mathrm{R}^{2} \mathrm{~B}_{0} \mathrm{Q}=\Delta \mathrm{L}$
$\Rightarrow \pi \mathrm{NQB}_{0} \mathrm{R}^{2}=\Delta \mathrm{L}$

## JEE Advanced 2020 | Paper-1 | Code-E

5. A parallel beam of light strikes a piece of transparent glass having cross section as shown in the figure below. Correct shape of the emergent wavefront will be (figures are schematic and not drawn to scale)

(A)

(B)

(C)

(D)

Answer: A
Solution:

Concept: based on Huygen's principle.
Theory of wavefront $\rightarrow$ wave moves such that direction of propagation is perpendicular to wavefront.
And as we can see that light ray will travel more in air than glass medium. And if glass medium is more than wave front will slack. So, shape of the emergent wavefront will be

## JEE Advanced 2020 | Paper-1 | Code-E

6. An open-ended U-tube of uniform cross-sectional area contains water (density $10^{3} \mathrm{~kg}$ $\mathrm{m}^{-3}$ ). Initially the water level stands at 0.29 m from the bottom in each arm. Kerosene oil (a water-immiscible liquid) of density $800 \mathrm{~kg} \mathrm{~m}^{-3}$ is added to the left arm until its length is 0.1 m , as shown in the schematic figure below. The ratio $\left(\frac{\mathrm{h}_{1}}{\mathrm{~h}_{2}}\right)$ of the heights of the liquid in the two arms is

(A) $\frac{15}{14}$
(B) $\frac{35}{33}$
(C) $\frac{7}{6}$
(D) $\frac{5}{4}$

Answer: B
Solution:

# JEE Advanced 2020 | Paper-1 | Code-E 

$\because$ Pressure will be same at same horizontal level,
$\mathrm{P}_{\mathrm{A}}=\mathrm{P}_{\mathrm{B}}$ (Same horizontal level)

$$
\mathrm{P}_{\mathrm{atm}}+\rho_{\mathrm{ker} 0} \mathrm{~g} \times 0.1+\rho_{\mathrm{w}} \mathrm{~g}\left(\mathrm{~h}_{1}-0.1\right)=\mathrm{P}_{\mathrm{atm}}+\rho_{\mathrm{w}} \mathrm{gh}_{2}
$$

Where, $\mathrm{P}_{\mathrm{atm}}=$ Atmospheric pressure

$$
\rho_{\text {kero }}=\text { density of kerosene }=800 \mathrm{~kg} / \mathrm{m}^{3}
$$

$$
\rho_{\mathrm{w}}=\text { density of water }=1000 \mathrm{~kg} / \mathrm{m}^{3}
$$

$$
\mathrm{g}=\text { acceleration due to gravity. }
$$

As we know, pressure force due to liquid column $=\rho g h$
$\Rightarrow 800 \times 0.1+1000\left(\mathrm{~h}_{1}-0.1\right)=1000 \mathrm{~h}_{2}$
$\Rightarrow \quad 0.8+10 \mathrm{~h}_{1}-1=10 \mathrm{~h}_{2}$
$\Rightarrow \quad 10\left(h_{1}-h_{2}\right)=0.2$
$\mathrm{h}_{1}-\mathrm{h}_{2}=0.02$
Also, initial level of water in both arms $=2 \times 0.29$
$\therefore \mathrm{h}_{1}-0.1+\mathrm{h}_{2}=0.58$
$h_{1}+h_{2}=0.68$

From (1) \& (2)
$\mathrm{h}_{1}=0.35 \& \mathrm{~h}_{2}=0.33$

JEE Advanced 2020 | Paper-1 | Code-E
So $\frac{\mathrm{h}_{1}}{\mathrm{~h}_{2}}=\frac{35}{33}$

# JEE Advanced 2020 | Paper-1 | Code-E 

## SECTION 2 (Maximum Marks: 24)

- This section contains SIX (06) questions.
- Each question has FOUR options. ONE OR MORE THAN ONE of these four option(s) is(are) the correct answer(s).
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme:

Full Marks : +4 If only (all) the correct option(s) is(are) chosen;
Partial Marks : +3 If all four options is correct but ONLY three options are chosen;
Partial Marks : +2 If three or more options are correct but ONLY two options are chosen; both of which are correct;

Partial Marks : +1 If two or more options are correct but ONLY one option is chosen and it is a correct option;
Zero Marks : 0 If none of the options is chosen (i.e. the questions is unanswered);
Negative Marks : -2 In all other cases.
7. A particle of mass $m$ moves in circular orbits with potential energy $\mathrm{V}(r)=F r$, where $F$ is a positive constant and $r$ is its distance from the origin. Its energies are calculated using the Bohr model. If the radius of the particle's orbit is denoted by $R$ and its speed and energy are denoted by $v$ and $E$, respectively, then for the $n^{\text {th }}$ orbit (here $h$ is the Planck's constant)
(A) $\mathrm{R} \propto 1^{1 / 3}$ and $v \propto n^{2 / 3}$
(B) $\mathrm{R} \propto \mathrm{n}^{2 / 3}$ and $v \propto \mathrm{n}^{1 / 3}$
(C) $E=\frac{3}{2}\left(\frac{n^{2} h^{2} F^{2}}{4 \pi^{2} m}\right)^{1 / 3}$
(D) $\mathrm{E}=2\left(\frac{\mathrm{n}^{2} \mathrm{~h}^{2} \mathrm{~F}^{2}}{4 \pi^{2} \mathrm{~m}}\right)^{1 / 3}$

Answer: B, C
Solution:
P.E., $\mathrm{V}(\mathrm{r})=\mathrm{Fr}$

## JEE Advanced 2020 | Paper-1 | Code-E

$\therefore$ Force $=\frac{-\mathrm{dV}}{\mathrm{dr}}$

$=-\mathrm{F}$
$F=\frac{m v^{2}}{R} \ldots$ (1)
$m v R=\frac{n h}{2 \pi}$
$\Rightarrow \mathrm{R}=\frac{\mathrm{nh}}{2 \pi \mathrm{mv}} \Rightarrow \mathrm{F}=\frac{\mathrm{mv}^{2}}{\frac{\mathrm{nh}}{2 \pi \mathrm{mv}}} \Rightarrow \mathrm{F}=\frac{\mathrm{m}^{2} \mathrm{v}^{3} \cdot 2 \pi}{\mathrm{nh}} \Rightarrow \mathrm{v}^{3}=\frac{\mathrm{nFh}}{2 \pi \mathrm{~m}^{2}} \Rightarrow \mathrm{~V} \mathrm{\alpha n}^{1 / 3}$
From (2) $R=\frac{n h}{2 \pi m v}$
$R=\frac{\mathrm{kn}}{\mathrm{n}^{\frac{1}{3}}}$
$R \propto n^{\frac{2}{3}}$
$\mathrm{E}=\mathrm{KE}+\mathrm{PE}$
$=\frac{1}{2} \mathrm{mv}^{2}+\mathrm{V}(\mathrm{r})=\frac{1}{2} \mathrm{FR}+\mathrm{FR}$
$=\frac{3}{2} \mathrm{FR}=\frac{3}{2} . \mathrm{F} \times \frac{\mathrm{nh}}{2 \pi \mathrm{~m}\left(\frac{\mathrm{nFh}}{2 \pi \mathrm{~m}^{2}}\right)^{\frac{1}{3}}}$
$\mathrm{E}=\frac{3}{2}\left(\frac{\mathrm{n}^{2} \mathrm{~h}^{2} \mathrm{~F}^{2}}{4 \pi^{2} \mathrm{~m}}\right)^{\frac{1}{3}}$
Option B and C.

## JEE Advanced 2020 | Paper-1 | Code-E

8. The filament of a light bulb has surface area $64 \mathrm{~mm}^{2}$. The filament can be considered as a black body at temperature 2500 K emitting radiation like a point source when viewed from far. At night the light bulb is observed from a distance of 100 m . Assume the pupil of the eyes of the observer to be circular with radius 3 mm . Then
(Take Stefan-Boltzmann constant $=5.67 \times 10^{-8} \mathrm{Wm}^{-2} \mathrm{~K}^{-4}$,
Wien's displacement constant $=2.90 \times 10^{-3} \mathrm{~m}-\mathrm{K}$,
Planck's constant $=6.63 \times 10^{-34} \mathrm{Js}$,
speed of light in vacuum $=3.00 \times 10^{8} \mathrm{~ms}^{-1}$ )
(A) power radiated by the filament is in the range 642 W to 645 W
(B) radiated power entering into one eye of the observer is in the range $3.15 \times 10^{-8} \mathrm{~W}$ to $3.25 \times 10^{-8} \mathrm{~W}$
(C) the wavelength corresponding to the maximum intensity of light is 1160 nm
(D) taking the average wavelength of emitted radiation to be 1740 nm , the total number of photons entering per second into one eye of the observer is in the range $2.75 \times 10^{11}$ to $2.85 \times 10^{11}$
Answer: B, C, D
Solution:
Surface area of filament (A) $=64 \mathrm{~mm}^{2}$
Temperature ( T ) $=2500 \mathrm{~K}$
$\mathrm{P}=\mathrm{e} \sigma \mathrm{AT}^{4}$
$=1 \times 5.67 \times 10^{-8} \times 64 \times 10^{-6} \times(2500)^{4}=141.75 \mathrm{~W}$
Radiated power entering one's eye $=\frac{\mathrm{P}}{4 \pi \mathrm{R}^{2}} \times \pi \mathrm{r}^{2}$
$=\frac{141.75 \times\left(3 \times 10^{-3}\right)^{2}}{4(100)^{2}}=318.9 \times 10^{-10}$
$=3.19 \times 10^{-8} \mathrm{~W} \rightarrow$ option (B)
For wavelength corresponding to maximum intensity,
$\lambda_{\mathrm{m}} \mathrm{T}=\mathrm{b}$
$\lambda_{\mathrm{m}}=\frac{2.93 \times 10^{-6}}{2500}=1160 \mathrm{~nm} \rightarrow$ option (C)
For no of photons, per sec,
$\mathrm{N} \frac{\mathrm{hc}}{\lambda}=\mathrm{P}$
$\mathrm{N}=\frac{\mathrm{P} \lambda}{\mathrm{hc}}=\frac{3.19 \times 10^{-8} \times 1740 \times 10^{-9}}{6.67 \times 10^{-34} \times 3 \times 10^{8}}=2.77 \times 10^{11}$ Option (D).
Ans. BCD

## JEE Advanced 2020 | Paper-1 | Code-E

9. Sometimes it is convenient to construct a system of units so that all quantities can be expressed in terms of only one physical quantity. In one such system, dimensions of different quantities are given in terms of a quantity $X$ as follows: [position] $=\left[X^{\alpha}\right]$; [speed] $=\left[X^{\beta}\right] ;$ acceleration $]=\left[X^{p}\right]$; [linear momentum $]=\left[X^{q}\right]$; [force $]=\left[X^{r}\right]$. Then
(A) $\alpha+p=2 \beta$
(B) $p+q-r=\beta$
(C) $-q+r=\alpha$
(D) $p+q+r=\beta$

Answer: A, B
Solution:
Position $=\left[\mathrm{x}^{\alpha}\right]$
$\Rightarrow[\mathrm{L}]=\left[\mathrm{X}^{\alpha}\right]$
speed $=X^{\beta}$
$\mathrm{LT}^{-1}=\mathrm{X}^{\beta}$
$\mathrm{X}^{\alpha} \mathrm{T}^{-1}=\mathrm{X}^{\beta}$ (from (1))
$\mathrm{T}^{-1}=\mathrm{X}^{\beta-\alpha}$
Acceleration $=X^{P}$
$\mathrm{LT}^{-1} \times \mathrm{T}^{-1}=\mathrm{X}^{\mathrm{p}}$
$X^{\beta} \cdot X^{\beta-\alpha}=x^{P}$
$X^{2 \beta-\alpha}=x^{P}$
$\Rightarrow 2 \beta-\alpha=p$
$\alpha+p=2 \beta$
Option (A)
[Linear momentum] $=\mathrm{x}^{\mathrm{q}}$
$\mathrm{MLT}^{-1}=\mathrm{x}^{\mathrm{q}}$
$M \cdot X^{\beta}=X^{q}$
$M=x^{q-\beta} . . .(3)$
[force] $=\mathrm{x}^{\mathrm{r}}$
M LT ${ }^{-2}=x^{r}$
M. $\mathrm{X}^{\mathrm{p}}=\mathrm{x}^{\mathrm{r}}$
$M=x^{r-p}$
From (3) \& (4) , q- $\beta=r-p$
$p+q-r=\beta$ option (B)
From (A) $p+q-r=\frac{\alpha}{2}+\frac{p}{2}$
$\frac{\mathrm{P}}{2}+\mathrm{q}-\mathrm{r}=\frac{\alpha}{2}$
Ans :- A,B

## JEE Advanced 2020 | Paper-1 | Code-E

10. A uniform electric field, $\overrightarrow{\mathrm{E}}=-400 \sqrt{3} \hat{\mathrm{y}} \mathrm{NC}^{-1}$ is applied in a region. A charged particle of mass $m$ carrying positive charge $q$ is projected in this region with an initial speed of $2 \sqrt{10} \times 10^{6} \mathrm{~ms}^{-1}$. This particle is aimed to hit a target T , which is 5 m away from its entry point into the field as shown schematically in the figure. Take $\frac{\mathrm{q}}{\mathrm{m}}=10^{10} \mathrm{Ckg}^{-1}$. Then

(A) the particle will hit T if projected at an angle $45^{\circ}$ from the horizontal
(B) the particle will hit T if projected either at an angle $30^{\circ}$ or $60^{\circ}$ from the horizontal
(C) time taken by the particle to hit $T$ could be $\sqrt{\frac{5}{6}} \mu \mathrm{~s}$ as well as $\sqrt{\frac{5}{2}} \mu \mathrm{~s}$
(D) time taken by the particle to hit T is $\sqrt{\frac{5}{3}} \mu \mathrm{~s}$

Answer: B, C

# JEE Advanced 2020 | Paper-1 | Code-E 

## Solution:

Consider like projectile motion,
So here, $g_{\text {eff }}=\frac{q E}{m}=400 \sqrt{3} \times 10^{10}$

$$
\begin{aligned}
& \mathrm{g}_{\text {eff }}=\frac{\mathrm{qE}}{\mathrm{~m}}=400 \sqrt{3} \times 10^{10} \\
& \mathrm{R}=\frac{\mathrm{u}^{2} \sin 2 \theta}{\mathrm{~g}_{\text {eff }}} \\
& 5=\frac{4 \times 10 \times 10^{12} \times \sin 2 \theta}{400 \sqrt{3} \times 10^{10}} \Rightarrow \sin 2 \theta=\frac{\sqrt{3}}{2}
\end{aligned}
$$

$$
2 \theta=60^{\circ}, 120^{\circ}
$$

$\therefore \theta=30^{\circ}, 60^{\circ}$
$\mathrm{T}=\frac{2 \mathrm{u} \sin \theta}{\mathrm{g}_{\text {eff }}}$
at $\theta=30^{\circ}, \mathrm{T}=\frac{2 \times 2 \sqrt{10} \times 10^{6} \times \frac{1}{2}}{400 \sqrt{3} \times 10^{10}} \mu \mathrm{~s}=\frac{\sqrt{10}}{\sqrt{3 \times 4}}=\sqrt{\frac{10}{12}}=\sqrt{\frac{5}{6}} \mu \mathrm{~s}$
at $\theta=60^{\circ}, T=\sqrt{\frac{5}{2}} \mu$ s Ans. B and C

## JEE Advanced 2020 | Paper-1 | Code-E

11. Shown in the figure is a semicircular metallic strip that has thickness $t$ and resistivity $\rho$. Its inner radius is $R_{1}$ and outer radius is $R_{2}$. If a voltage $V_{0}$ is applied between its two ends, a current $I$ flows in it. In addition, it is observed that a transverse voltage $\Delta V$ develops between its inner and outer surfaces due to purely kinetic effects of moving electrons (ignore any role of the magnetic field due to the current). Then (figure is schematic and not drawn to scale)

(A) $\mathrm{I}=\frac{\mathrm{v}_{0} \mathrm{t}}{\pi \rho} \ln \left(\frac{\mathrm{R}_{2}}{\mathrm{R}_{1}}\right)$
(B) the outer surface is at a higher voltage than the inner surface
(C) the outer surface is at a lower voltage than the inner surface
(D) $\Delta V \propto I^{2}$

Answer: A, C, D
Solution:

To calculate resistance, $\ell=\pi \mathrm{r}, \mathrm{A}=\mathrm{tdr}$
$d R=\frac{\rho \pi r}{t d r}$
But all elemental strips are in parallel so

## JEE Advanced 2020 | Paper-1 | Code-E

$$
\begin{aligned}
& \frac{1}{\mathrm{R}_{\mathrm{eq}}}=\int \frac{1}{\mathrm{dR}} \\
& \frac{1}{\mathrm{R}_{\mathrm{eq}}}=\int_{\mathrm{R}_{1}}^{\mathrm{R}_{2}} \frac{\mathrm{tdr}}{\rho \pi \mathrm{r}} \\
& \frac{1}{\mathrm{R}_{\mathrm{eq}}}=\frac{\mathrm{t}}{\rho \pi} \ell \mathrm{n}\left(\frac{\mathrm{R}_{2}}{\mathrm{R}_{1}}\right) \\
& \therefore \mathrm{I}=\frac{\mathrm{V}_{0}}{\mathrm{R}_{\mathrm{eq}}}=\frac{\mathrm{V}_{0} \mathrm{t} \ell \mathrm{n}}{\pi \rho}\left(\mathrm{R}_{2} / \mathrm{R}_{1}\right) \text { Option }(\mathrm{A})
\end{aligned}
$$

electrons move in a circular path so they exp. centripetal force due to electric field set up because of p.d., so 'E' field should be from inner to outer, therefore outer surface is at lower voltage than inner.
To check p.d. across surface, let us consider elemental resistance

$d R=\frac{\rho \pi r}{t d r}$

## JEE Advanced 2020 | Paper-1 | Code-E

$\therefore \mathrm{di}=\frac{\mathrm{v}_{0} \mathrm{tdr}}{\rho \pi \mathrm{r}}$
$n e A v_{d}=\frac{V_{0} t d r}{\rho \pi r}$
(as $\mathrm{A}=\mathrm{tdr}$ )
$\Rightarrow \mathrm{V}_{\mathrm{d}}=\frac{\mathrm{V}_{0}}{\rho \pi \mathrm{rne}}=\frac{\mathrm{KV}_{0}}{\mathrm{r}}$
Now as electrons move in circular path so,

$e \mathrm{E}=\frac{\mathrm{mv} v_{d}^{2}}{\mathrm{r}}$
$\mathrm{E}=\frac{\mathrm{m}}{\mathrm{er}} \times \frac{\mathrm{K}^{2} \mathrm{~V}_{0}^{2}}{\mathrm{r}^{2}}$
$\mathrm{E}=\frac{\mathrm{K}^{\prime} \cdot V_{0}^{2}}{\mathrm{r}^{3}}$
$\therefore$ p.d., $\Delta V=-\int \overrightarrow{\mathrm{E}} . \overrightarrow{d r}$
$\Delta V=-K^{\prime} V_{0}^{2} \int_{R_{1}}^{R_{2}} \frac{d r}{r^{3}}$
$\Delta \mathrm{V}=\mathrm{K}^{\prime} \mathrm{V}_{0}^{2}\left[\frac{1}{\mathrm{R}_{1}}-\frac{1}{\mathrm{R}_{2}}\right]$
$\Delta \mathrm{V}=\mathrm{K}^{\prime \prime} \mathrm{V}_{0}^{2}$
$\Rightarrow \Delta \mathrm{VaV}_{0}^{2}$
$\Delta V \alpha I^{2}$
( $\mathrm{as}_{\mathrm{V}}^{0} \mathrm{\alpha I}$ )
Ans. Option ACD

## JEE Advanced 2020 | Paper-1 | Code-E

12. As shown schematically in the figure, two vessels contain water solutions (at temperature T ) of potassium permanganate $\left(\mathrm{KMnO}_{4}\right)$ of different concentrations $n_{1}$ and $n_{2}\left(n_{1}>n_{2}\right)$ molecules per unit volume with $\Delta n=\left(n_{1}-n_{2}\right) \ll n_{1}$. When they are connected by a tube of small length $l$ and cross-sectional area $S, \mathrm{KMnO}_{4}$ starts to diffuse from the left to the right vessel through the tube. Consider the collection of molecules to behave as dilute ideal gases and the difference in their partial pressure in the two vessels causing the diffusion. The speed $v$ of the molecules is limited by the viscous force $-\beta v$ on each molecule, where $\beta$ is a constant. Neglecting all terms of the order $(\Delta n)^{2}$, which of the following is/are correct? ( $k_{B}$ is the Boltzmann constant)

(A) the force causing the molecules to move across the tube is $\Delta n k_{B} T S$
(B) force balance implies $n_{1} \beta v l=\Delta n k_{B} T$
(C) total number of molecules going across the tube per sec is $\left(\frac{\Delta n}{l}\right)\left(\frac{\mathrm{k}_{\mathrm{B}} \mathrm{T}}{\beta}\right) \mathrm{S}$
(D) rate of molecules getting transferred through the tube does not change with time

Answer: A, B, C

## JEE Advanced 2020 | Paper-1 | Code-E

Solution:

| $F=\Delta P S$ |  |
| :--- | :--- |
| $=\left(P_{1}-P_{2}\right) S$ | $\left[\begin{array}{l}P V=N K_{B} T \\ P=\frac{N}{V} K_{B} T\end{array}\right]$ |

$$
\begin{aligned}
& P=n K_{B} T \\
& =n_{1} K_{B} T S-n_{2} K_{B} T S
\end{aligned}
$$

$$
=\left(\mathrm{n}_{1}-\mathrm{n}_{2}\right) \mathrm{K}_{\mathrm{B}} \mathrm{TS} \Rightarrow \Delta \mathrm{nK}_{\mathrm{B}} \mathrm{TS} \Rightarrow \Delta \mathrm{nK}_{\mathrm{B}} \text { TS (Option - A) }
$$

$$
\beta \mathrm{v} \times\left(\mathrm{n}_{1} \times \mathrm{S} \times \ell\right)=\Delta \mathrm{nK}_{\mathrm{B}} \cdot \mathrm{~T} . \mathrm{S}
$$

$$
\Rightarrow \mathrm{n}_{1} \beta \mathrm{v} \ell=\Delta \mathrm{nK}_{\mathrm{B}} \mathrm{~T}
$$

Option (B).
$\mathrm{N}=$ total number of molecules,
$\frac{d N}{d t}=S \times v \times n_{1}$
$=S \times \frac{\Delta \mathrm{nK}_{\mathrm{B}} \mathrm{T}}{\beta \ell}$ (from (B) putting $\mathrm{vn}_{1}$ )

Correct option (C)

As $\Delta \mathrm{n}$ decreases with time so no of molecules decreases with time, option (D) not correct.

Ans. ABC.

## JEE Advanced 2020 | Paper-1 | Code-E

## SECTION 3 (Maximum Marks: 24)

- This section contains SIX (06) questions. The answer to each question is a NUMERICAL VALUE.
- For Each question, enter the correct numerical value of the answer using the mouse and the on-screen virtual numerical keypad in the place designated to enter the answer. If the numerical value has more than two decimal places, truncate/round-off the value to TWO decimal places.
- Answer to each question will be evaluated according to the following marking scheme: Full Marks : +4 If ONLY the correct numerical value is entered; Zero Marks : 0 In all other cases.

13. Put a uniform meter scale horizontally on your extended index fingers with the left one at 0.00 cm and the right one at 90.00 cm . When you attempt to move both the fingers slowly towards the center, initially only the left finger slips with respect to the scale and the right finger does not. After some distance, the left finger stops and the right one start slipping. Then the right finger stops at a distance $x_{R}$ from the center (50.00 cm ) of the scale and the left one starts slipping again. This happens because of the difference in the frictional forces on the two fingers. If the coefficients of static and dynamic friction between the fingers and the scale are 0.40 and 0.32 , respectively, the value of $x_{R}($ in cm$)$ is $\qquad$
Answer: 25.60
Solution:
FBD of Rod

As the rod is in equilibrium
$\therefore \tau_{\text {netabout centre }}=0$
$\therefore 50 \mathrm{~N}_{1}=40 \mathrm{~N}_{2}$
$\therefore \mathrm{N}_{2}>\mathrm{N}_{1}$

## JEE Advanced 2020 | Paper-1 | Code-E

$\therefore$ by balancing torque, we conclude $\mathrm{N}_{2}>\mathrm{N}_{1}$, so $\mathrm{f}_{2}>\mathrm{f}_{1}$

As rod does not move, only left finger slips,
So $F_{\text {net }}=0 \quad \mu_{\mathrm{K}} \mathrm{N}_{3}=\mu_{\mathrm{S}} \mathrm{N}_{4}$

$$
\begin{equation*}
0.32 \mathrm{~N}_{3}=0.40 \mathrm{~N}_{4} \tag{1}
\end{equation*}
$$

$\tau_{\text {net }_{\text {tabout center }}}=0, \quad \mathrm{x}_{1} \mathrm{~N}_{3}=40 \mathrm{~N}_{4}$
Dividing eq. (1)by(2)
$\frac{0.32}{\mathrm{x}_{1}}=\frac{0.40}{40} \Rightarrow \mathrm{x}_{1}=32 \mathrm{~cm}$

About centre
Div eq.(3) by eq.(4), $\frac{0.40}{x_{1}}=\frac{0.32}{x_{R}}$

$$
\begin{aligned}
& \frac{0.40}{32 \mathrm{~cm}}=\frac{0.32}{\mathrm{X}_{\mathrm{R}}} \\
& \Rightarrow \mathrm{X}_{\mathrm{R}}=\frac{32 \times 32}{40}=\frac{128}{5}=25.60 \mathrm{~cm}
\end{aligned}
$$

Ans. 25.60

## JEE Advanced 2020 | Paper-1 | Code-E

14. When water is filled carefully in a glass, one can fill it to a height $h$ above the rim of the glass due to the surface tension of water. To calculate $h$ just before water starts flowing, model the shape of the water above the rim as a disc of thickness $h$ having semicircular edges, as shown schematically in the figure. When the pressure of water at the bottom of this disc exceeds what can be withstood due to the surface tension, the water surface breaks near the rim and water starts flowing from there. If the density of water, its surface tension and the acceleration due to gravity are $10^{3} \mathrm{~kg} \mathrm{~m}^{-3}, 0.07 \mathrm{Nm}^{-1}$ and $10 \mathrm{~ms}^{-2}$, respectively, the value of $h(\mathrm{in} \mathrm{mm})$ is $\qquad$ .

Answer: 3.74
Solution:
Let radius of disc = 'r'

[ $\mathrm{A}=$ projected area $=\mathrm{h}(2 \mathrm{r})$ ]

(After balancing effect of $\mathrm{P}_{\text {atm }}$ on both sides)
$\mathrm{S} \times 2 \pi \mathrm{r}=\mathrm{Pavg} . \times \mathrm{h}(2 \pi \mathrm{r})$
$P_{\text {avg. }}=\frac{0+\rho g h}{2}=\frac{\rho g h}{2}$
$S=\left(\frac{\rho g h}{2}\right) \times h$
$\frac{2 S}{\rho g}=h^{2}$
pg
$\Rightarrow \mathrm{h}=\sqrt{\frac{2 \mathrm{~S}}{\rho \mathrm{~g}}}=\sqrt{\frac{2 \times 0.07}{10^{3} \times 10}}=\sqrt{14} \times 10^{-3} \mathrm{~m}=3.74 \mathrm{~mm}$
Ans. $=3.74$

## JEE Advanced 2020 | Paper-1 | Code-E

15. One end of a spring of negligible unstretched length and spring constant $k$ is fixed at the origin $(0,0)$. A point particle of mass $m$ carrying a positive charge $q$ is attached at its other end. The entire system is kept on a smooth horizontal surface. When a point dipole $p$ pointing towards the charge $q$ is fixed at the origin, the spring gets stretched to a length $l$ and attains a new equilibrium position (see figure below). If the point mass is now displaced slightly by $\Delta l \ll l$ from its equilibrium position and released, it is found to oscillate at frequency $\frac{1}{\delta} \sqrt{\frac{\mathrm{k}}{\mathrm{m}}}$. The value of $\delta$ is $\qquad$ -.

Answer: 3.14
Solution:

So we can also observe ' $k$ ' as $\frac{d^{2} U}{{d x^{2}}^{2}}$ from eq.
$\mathrm{U}=\frac{1}{2} \mathrm{kx}^{2}$

# JEE Advanced 2020 | Paper-1 | Code-E 

$\frac{d U}{d x}=K x$
$\frac{d^{2} U}{d^{2}}=K$
So we can say,
$\mathrm{f}=\frac{1}{2 \pi} \sqrt{\frac{\mathrm{~d}^{2} \mathrm{U} / \mathrm{dx}^{2}}{\mathrm{~m}}}$
So by above concept let us find Potential Energy, (U) of system from equilibrium. As given, negligible unstretched length, so spring length is elongated length only.

$\mathrm{U}=\frac{1}{2} \mathrm{kx}^{2}+\frac{\mathrm{p} \times \mathrm{q}}{4 \pi \epsilon_{0} \mathrm{x}^{2}}$
$\frac{d U}{d x}=k x-\frac{2 p q}{4 \pi \epsilon_{0} x^{3}}$
(for equilibrium, $\frac{d U}{d x}=0$ ) given equilibrium at $x=\lambda$
$\therefore \mathrm{K} \ell=\frac{2 \mathrm{pq}}{4 \pi \in_{0} \ell^{3}}$
diff. eq(1) again, $\frac{\mathrm{d}^{2} \mathrm{U}}{\mathrm{dx}^{2}}=K+\frac{6 \mathrm{pq}}{4 \pi \epsilon_{0} \mathrm{x}^{4}}$
As equilibrium at $\mathrm{x}=\ell,\left.\therefore \frac{\mathrm{d}^{2} \mathrm{U}}{\mathrm{dx}^{2}}\right|_{\mathrm{at} \mathrm{n}=\ell}=\mathrm{K}+\frac{6 \mathrm{pq}}{4 \pi \epsilon_{0} \ell^{4}}$
(From (2) put value of $\frac{2 \mathrm{pq}}{4 \pi \epsilon_{0} \ell^{3}}$ )
$\left.\frac{\mathrm{d}^{2} \mathrm{U}}{\mathrm{dx}^{2}}\right|_{\mathrm{at} \mathrm{x}=\ell}=\mathrm{k}+3 \mathrm{~K}=4 \mathrm{~K}$
$\therefore \mathrm{f}=\frac{1}{2 \pi} \sqrt{\frac{\mathrm{~d}^{2} \mathrm{U} / \mathrm{dx}^{2}}{\mathrm{~m}}}=\frac{1}{2 \pi} \sqrt{\frac{4 \mathrm{~K}}{\mathrm{~m}}}=\frac{1}{\pi} \sqrt{\frac{\mathrm{k}}{\mathrm{m}}}$
$\therefore \delta=\pi=3.14$ Ans.

## JEE Advanced 2020 | Paper-1 | Code-E

16. Consider one mole of helium gas enclosed in a container at initial pressure $P_{1}$ and volume $V_{1}$. It expands isothermally to volume $4 V_{1}$. After this, the gas expands adiabatically and its volume becomes $32 V_{1}$. The work done by the gas during isothermal and adiabatic expansion processes are $W_{\text {iso }}$ and $W_{\text {adia, respectively. If the }}$ ratio $\frac{\mathrm{W}_{\text {iso }}}{\mathrm{W}_{\text {adia }}}=\mathrm{f} \ln 2$, then f is $\qquad$ .

Answer: 1.77
Solution:
Let the initial temperature is T

For adiabatic process
$\mathrm{TV}^{\gamma-1}=$ Constant, $\gamma=\frac{5}{3}$
$T^{\prime}=T\left(\frac{4 V_{1}}{32 V_{1}}\right)^{\frac{5}{3}-1}$
$=\mathrm{T}\left(\frac{1}{8}\right)^{\frac{2}{3}}$
$=\frac{\mathrm{T}}{4}$
$\mathrm{W}_{\text {adb. }}=\frac{\mathrm{nR}\left(\mathrm{T}_{1}-\mathrm{T}_{2}\right)}{\gamma-1}$
$=\frac{n R\left(T-\frac{T}{4}\right)}{\frac{5}{3}-1}$
$=\frac{3}{2} \mathrm{nR} \times \frac{3 \mathrm{~T}}{4}=\frac{9}{8} \mathrm{nRT}$

## JEE Advanced 2020 | Paper-1 | Code-E

Now work done in isothermal.;

$$
\begin{aligned}
& \mathrm{W}_{\text {iso }}=\mathrm{nRT} \ln \left(\frac{\mathrm{~V}_{2}}{\mathrm{~V}_{1}}\right) \\
&=\mathrm{nRT} \ln \left(\frac{4 \mathrm{~V}_{1}}{\mathrm{~V}_{1}}\right) \\
&=2 \mathrm{nRT} \ln 2 \\
& \frac{\mathrm{~W}_{\mathrm{iso}}}{\mathrm{~W}_{\mathrm{adb}}} \quad=\frac{2 \mathrm{nRT} \ln 2}{\frac{9}{8} \mathrm{nRT}} \\
&=\frac{16}{9} \ln 2 \\
& \therefore \quad \mathrm{f}=\frac{16}{9}=1.77
\end{aligned}
$$

17. A stationary tuning fork is in resonance with an air column in a pipe. If the tuning fork is moved with a speed of $2 \mathrm{~ms}^{-1}$ in front of the open end of the pipe and parallel to it, the length of the pipe should be changed for the resonance to occur with the moving tuning fork. If the speed of sound in air is $320 \mathrm{~ms}^{-1}$, the smallest value of the percentage change required in the length of the pipe is $\qquad$ .

Answer: 0.62
Solution:
For open pipe resonance, $f=\frac{n v}{4 L}$
Let us consider for $\mathrm{n}=1$,
Initial length of pipe $=L_{1}$ for $f_{1}$

$$
\begin{equation*}
\left(\mathrm{f}_{1}=\frac{\mathrm{V}}{4 \mathrm{~L}_{1}}\right) \tag{1}
\end{equation*}
$$

Now due to Doppler's effect,

$$
\mathrm{f}_{2}=\left(\frac{320}{320-2}\right) \mathrm{f}_{1}
$$

$$
\begin{align*}
& \mathrm{f}_{2}=\left(\frac{320}{318}\right) \mathrm{f}_{1}  \tag{2}\\
\therefore \quad & \mathrm{f}_{2}=\frac{\mathrm{v}}{4 \mathrm{~L}_{2}}  \tag{3}\\
& \frac{320}{318} \times \frac{\mathrm{V}}{4 \mathrm{~L}_{1}}=\frac{\mathrm{V}}{4 \mathrm{~L}_{2}} \\
\Rightarrow & \frac{\mathrm{~L}_{2}}{\mathrm{~L}_{1}}=\frac{318}{320}
\end{align*}
$$

\% change in length,

$$
\begin{aligned}
& \frac{\Delta \mathrm{L}}{\mathrm{~L}} \times 100 \%=\left(\frac{\mathrm{L}_{1}-\mathrm{L}_{2}}{\mathrm{~L}_{1}}\right) \times 100 \% \\
& =\left(1-\frac{\mathrm{L}_{2}}{\mathrm{~L}_{1}}\right) \times 100 \% \\
& =\left(1-\frac{318}{320}\right) \times 100 \% \\
& =\frac{200}{320} \%=\frac{5}{8} \%=0.625 \% \\
& =0.62 \% \\
& \text { Ans. } 0.62
\end{aligned}
$$

18. A circular disc of radius $R$ carries surface charge density $\sigma(r)=\sigma_{0}\left(1-\frac{r}{R}\right)$, where $\sigma_{0}$ is a constant and $r$ is the distance from the center of the disc. Electric flux through a large spherical surface that encloses the charged disc completely is $\phi_{0}$. Electric flux through another spherical surface of radius $\frac{R}{4}$ and concentric with the disc is $\phi$. Then the ratio $\frac{\phi_{0}}{\phi}$ is $\qquad$ .

Answer: 6.4

# JEE Advanced 2020 | Paper-1 | Code-E 

## Solution:

Charge in the elemental ring $=\int_{r=0}^{r} \sigma 2 \pi r d r$
$\phi_{0}=\frac{\mathrm{q}_{\mathrm{enc}}}{\varepsilon_{0}}$ (charge enclosed completely, so $\mathrm{r}=\mathrm{R}$ )
$\& \phi=\frac{\mathrm{q}_{\text {enc }}}{\varepsilon_{0}}\left(\ldots .\right.$. upto $\left.\mathrm{r}=\frac{\mathrm{R}}{4}\right)$
$\mathrm{q}=\int_{0}^{\mathrm{r}} \sigma_{0}\left(1-\frac{\mathrm{r}}{\mathrm{R}}\right) 2 \pi \mathrm{rdr}$
$=2 \pi \sigma_{0} \int_{0}^{r} r d r-\frac{2 \pi \sigma_{0}}{R} \int_{0}^{r} r^{2} d r$
$=2 \pi \sigma_{0}\left[\frac{r^{2}}{2}-\frac{r^{3}}{3 R}\right]$
For $\phi 0, r=R, q_{e n c}=2 \pi \sigma_{0}\left[\frac{R^{2}}{2}-\frac{R^{3}}{3 R}\right]=2 \pi \sigma_{0} R^{2} \times \frac{1}{6}$
For $\phi, r=\frac{R}{4}, q^{\prime}{ }_{\text {enc }}=2 \pi \sigma_{0}\left[\frac{\left(\frac{R}{4}\right)^{2}}{2}-\frac{\left(\frac{R}{4}\right)^{3}}{3 R}\right]$
$=2 \pi \sigma_{0}\left[\frac{\mathrm{R}^{2}}{2 \times 16}-\frac{\mathrm{R}^{2}}{64 \times 3}\right]$
$=2 \pi \sigma_{0} \mathrm{R}^{2}\left[\frac{6-1}{192}\right]$
$=2 \pi \sigma_{0} \mathrm{R}^{2} \times \frac{5}{192}$
$\therefore \frac{\phi_{0}}{\phi}=\frac{192}{6 \times 5}=6.4$
Ans. 6.4
