PLEDGE

India is my country.

All Indians are my brothers and sisters.

I love my country and I am proud of its rich and varied heritage.

I shall always strive to be worthy of it.

I shall respect my parents, teachers and all my elders and treat everyone with courtesy.

I pledge my devotion to my country and its people.

My happiness lies in their well-being and prosperity.

PREFACE

With a view to implementing ‘Equal Curriculum Policy’, Gujarat State Government and GCERT took a decision to implement directly the textbooks of NCERT, New Delhi, in Gujarat according to the proposal no. JSBH/121/Single file-62/N dated : 19-7-2017. Keeping this objective in view, this textbook of **Mathematics**, published by NCERT, is being implemented in **Class 5**. For this, the Gujarati translation of NCERT textbook was prepared first.

During the Gujarati translation process, minor changes have been made in proper nouns, numbers and chapters in accordance with present situation and Gujarat specific with NCERT’s prior approval. Now, the changes made in Gujarati version have been mandatorily incorporated in this English medium Mathematics Textbook. For this, expertise and experience of Shri H. I. Sarvaiya and Shri Mrugesh Parekh have been secured by the Board. The Board is thankful to them for their noble contribution.

The Gujarat State Board of School Textbooks is also obliged to NCERT for their kind co-operation.

Creative suggestions for the enhancement of quality of the textbook are always welcomed by the Board.

FOREWORD

The National Curriculum Framework (NCF), 2005, recommends that children's life at school must be linked to their life outside the school. This principle marks a departure from the legacy of bookish learning which continues to shape our system and causes a gap between the school, home and community. The syllabi and textbooks developed on the basis of NCF signify an attempt to implement this basic idea. They also attempt to discourage rote learning and the maintenance of sharp boundaries between different subject areas. We hope these measures will take us significantly further in the direction of a child-centred system of education outlined in the National Policy on Education (1986).

The success of this effort depends on the steps that school principals and teachers will take to encourage children to reflect on their own learning and to pursue imaginative activities and questions. We must recognise that given space, time and freedom, children generate new knowledge by engaging with the information passed on to them by adults. Treating the prescribed textbook as the sole basis of examination is one of the key reasons why other resources and sites of learning are ignored. Inculcating creativity and initiative is possible if we perceive and treat children as participants in learning, not as receivers of a fixed body of knowledge.

These aims imply considerable change in school routines and mode of functioning. Flexibility in the daily time-table is as necessary as rigour in implementing the annual calendar so that the required number of teaching days are actually devoted to teaching. The methods used for teaching and evaluation will also determine how effective this textbook proves for making children's life at school a happy experience, rather than a source of stress or boredom. Syllabus designers have tried to address the problem of curricular burden by restructuring and reorienting knowledge at different stages with greater consideration for child psychology and the time available for teaching. The textbook attempts to enhance this endeavour by giving higher priority and space to opportunities for contemplation and wondering, discussion in small groups, and activities requiring hands-on experience.

National Council of Educational Research and Training (NCERT) appreciates the hard work done by the Textbook Development Committee responsible for this book. We wish to thank the Chairperson of the Advisory Committee, Professor Anita Rampal and the Chief Advisor for this book, Professor Amitabha Mukherjee for guiding the work of this committee. Several teachers contributed to the development of this textbook; we are grateful to their principals for making this possible. We are indebted to the institutions and organisations which have generously permitted us to draw upon their resources, material and personnel. We are especially grateful to the members of the National Monitoring Committee, appointed by the Department of Secondary and Higher Education, Ministry of Human Resource Development under the Chairpersonship of Professor Mrinal Miri and Professor G.P. Deshpande, for their valuable time and contribution. As an organisation committed to the systemic reform and continuous improvement in the quality of its products, NCERT welcomes comments and suggestions which will enable us to undertake further revision and refinement.

ACKNOWLEDGEMENTS

National Council of Educational Research and Training (NCERT) thanks the following persons and institutions for their contribution towards this textbook. Special thanks are due to the Centre for Science Education and Communication (CSEC), Delhi University, for providing academic support and hosting all the textbook development workshops. The teams were fully supported by the staff, who put in tremendous effort through long working hours even on holidays.

The Council gratefully acknowledges the contributions of Sadiq Saeed (*DTP Operator*), Inderjeet Jairath (*Proof Reader*) and Shakamber Dutt (*Computer Station Incharge*) in shaping this book.

The stories of the farmers in Vidarbha are adapted from reports by P. Sainath and Jaideep Hardikar. The support offered by K.K. Vashishtha, *Head*, Department of Elementary Education, NCERT is also gratefully acknowledged. The Council acknowledges the support of Eklavya, Bhopal for the children's drawings and some mathematical puzzles.

For the photographs the Council gratefully acknowledges the contribution of the following:

Chapter 2 — R.C. Das, CIET

Chapter 8 — Raghu Rai and Delhi Tourism
Development Corporation, Karnail Singh,
Bhavna

Chapter 9 — Anita Rampal, Bhavna, Preeti Chadha Sadh

Chapter 10 — Nan Moore, Tad Arensmeier

Chapter 11 — Bhavna, Hema Batra

Chapter 14 — Bhavna, Kalyani Raghunathan

The following are applicable to all the maps of India used in this book

© Government of India, Copyright 2006

1. The responsibility for the correctness of internal details rests with the publisher.
2. The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.
3. The administrative headquarters of Chandigarh, Haryana and Punjab are at Chandigarh.
4. The interstate boundaries amongst Arunachal Pradesh, Assam and Meghalaya shown on this map are as interpreted from the "North-Eastern Areas (Reorganisation) Act. 1971," but have yet to be verified.
5. The external boundaries and coastlines of India agree with the Record/Master Copy certified by Survey of India.
6. The state boundaries between Uttarakhand & Uttar Pradesh, Bihar & Jharkhand and Chhattisgarh & Madhya Pradesh have not been verified by the Governments concerned.
7. The spellings of names in this map, have been taken from various sources.

Our National Fruit-Mango

કાનજી સૂણે
કોયલ કેરી ફુંજ
કેરી બગીચે

Kanji listens
A Cuckoo coos
Mangoes in orchard

Count total letters of this poem.
(Gujarati).

There are five letters in the first row.
There are five letters in the last row.
Alongwith seven letters in the
middle row, total seventeen letters
are there.

This poem of three lines is called
'Haiku'.

It is a poetic form of Japan and it is
written in just seventeen letters. Its
formation is (5+7+5).

Here given below is
another 'Haiku':

મીઠી સુગંધી

હું સોરઠની કેરી I am sweet and fragrant
હું હું કેસર. Mango from sorath
I am kesar.

- Do You know any poem or story
about mangoes ?

Some pictures of mango given here are
made by children.

- Which shapes come to your mind when you think about mangoes ?
Draw a picture, as given below, using different shapes of mangoes
you have thought about.

In Sanskrit, mango is called 'Amra'. Different shapes of the 'Amra' are often commonly seen in embroidery work, paintings or jewellery designs.

- Observe the pictures on curtains, mats or any other things and find mangoes of different colours and shapes.
- Draw mangoes of different types with different designs.

Talala taluka of Gir Somnath district is famous for its 'Kesar' mangoes world-wide. The quality of land ecology are suitable for growing mangoes. Talala can be called the capital of 'Kesar' mangoes. The plantations of mango are called 'Ambawadi'. They are life-line of this region.

You must have heard, “આંબે આવ્યા મોર, વાર્તા કહેશું પોર.” A mango-tree initially bears flowers (મોર-mor) in the season of spring. After that it bears mango fruits. Mangoes are picked from the trees and piled on the ground. Then, they are segregated and packed in different boxes as per their quality. These boxes are sent to the marketing yard.

- Bring similar number of mango boxes as the number of students in the class. Each box must contain 18 mangoes. If all the students will open the boxes and pile the mangoes in a single heap, what will be the total number of mangoes in that heap ? How many heaps of 10 mangoes each can be made from the big heap ?
- Guess, how many mango-trees will be there in a single mango orchard (Ambawadi)?

Well, if a farmer picks mangoes from one tree during the season which can fill 18 boxes of 12 kg in a quantity each, make an estimate of how many kg and how many boxes full of mangoes, the farmer would have picked up from all mango trees of the orchard.

- How many kilograms do you weigh?
- What is the approximate total weight of 12 students like you together?
- Compare the total weight of 12 students with the weight of total mangoes picked from this orchard, which one is less?
- If 5 kg mangoes are consumed at our home every week and if each kg will cost ₹ 75, how many kg of mangoes will be required for one month? What will be the cost of it?
- If the mango season continues for 3 months and you eat mangoes regularly, give an estimate of mangoes required and its cost during the season.

The way parrot bites the raw mango, the village kids compete with each other for getting the mangoes from the tree by hitting stones during the vacation time. If they are able to get one mango, they become very happy. And, sometimes these mangoes are picked up with the spirit of competition among the children. But, sometime kids get hurt by stones too. Sometimes, emotions of people get hurt and mothers are constantly worried for their kids. This phenomenon is not visible in cities. If, such scenes are created, drama of 'Mahabharat' takes place under mango-trees. Noise of people go louder than cooing of a cuckoo bird.

Look at the pictures of mangoes given below. Mango looks more beautiful with its leaves. Try to draw similar pictures of mangoes as given below :

This chapter is based on the subject mangoes. It introduces different types of mangoes to the students through the concept of marketing yard. Mathematical concepts like shapes, assumptions, big numbers, general operations, speed and loan are presented here in real life context. It also creatively revises and strengthens the concept studied before.

Do you know ? India produces approximately 1,60,00,000 tons (1 ton = 1000 kg) mangoes every year. India is the biggest producer of the mangoes in the world. Uttarpradesh does the largest production of mangoes in India.

What do you know about the biggest mango ? The biggest mango weighing 3.435 kg was displayed in philipines. It was 30.48 cm (12 inches) in length, 49.53 (19.5 inches) in circumference and 17.78 cm (7 inches) in breadth.

Jency has made pictures of mango in different shapes. Draw different shapes of mangoes.

When you go to the market to buy mangoes, don't get confused to see so many different types of mangoes. Search yourself in the market for the following types of mangoes. Buy whichever type of mango you like and enjoy it. Now draw these mangoes on card paper of different shapes.

Which type of mango, from the above given varieties, have you tasted ?

Mango orchard and its farmer

How many of you have seen a mango orchard ? Where have you seen it ? Have you seen it in real or on T.V. ? Are the mango trees tall and strong or short and weak ?

Do you know how to climb on a tree ? Are you afraid of climbing on a tall tree ?

- Close your eyes and imagine that you are standing under a huge mango-tree.
- Can you think, how tall a mango-tree can be ?

Imagine that, you have come to a mango orchard with a farmer. The leaves of the trees are making rustling sound in the gentle breeze. A cooing sound is heard from up the mango-tree. The mangoes on trees are swinging on branches because of the breeze.

The farmer starts his work in dark in early morning. Some farmers go

to their field in bullock-carts. The farmers, growing mangoes face a difficult time when the strong wind is blowing.

We cannot go far in a bullock-cart. A bullock-cart can cover the distance of only 4 kilometers in an hour.

- How much time will it take to cover the distance of 10 kilometers ?
- Guess, how much distance, do you cover in an hour by walking fast ?

We can feel the wind and also the sun moving with us during a journey. If we forget the direction, we can figure it out with the help of position of the sun. Right !!

Find Out

Look at the sun and find out direction of its rising.

- Stand wherever you are, which interesting things do you find in your east ?
- Write name of any two things situated in your west direction.

Wow ! so many mangoes !!

Farmers select a graft from a mango-tree which gives more mangoes and sow the plant and grow it in their own farms. A farmer has to wait for many years to grow a big mango-tree and to get mangoes on that tree.

• Observe different types of vehicles

The mangoes which are ready for sale are carried to APMC (Agriculture Production Market Committee) or market yard or bazar in different ways. To supply the mangoes to market yard as early as possible, big or small vehicles are used. A tractor moves at the speed of 20 km per hour.

- How much distance can a tractor cover at the same speed in 3 hours ?
- How much time it will take to cover the distance of 85 kilometers ?

- Draw the sketches following vehicles.

Now-a-days, the producers of mango are very happy, because this occupation is developed at national and international level. Our mangoes are exported to different states of our country and also to the foreign countries. Transportation of mangoes in a huge quantity is carried out by trucks and by airplanes.

It is a matter of concern for our environment and health that the use of fertilizers and pesticides have increased in mango orchards. Due to this the land quality is deteriorated and it is becoming infertile. Dangerous chemicals are used to ripen the mangoes quickly which harm our health.

At present, many farmers grow mangoes by organic method without using chemicals and keep our health as well as their land good.

Some people buy raw mangoes, get them ripen at their own home using dry grass, jute sacks, onion, paper or grain and enjoy them.

Many types of mangoes are in existence since many years. Earlier, huge native (Deshi) mango-trees were more in numbers. Commonly 3-4 mango-trees were seen in each farm. Now-a-days, farmers are growing grafted mangoes only.

Native mango-trees are about to extinct. If there are no mango-trees where will we hear cooing of cuckoos ? How will we enjoy mangoes by climbing on mango-tree like our grandfathers when they were kids ? How will we enjoy visit of mango orchard ? Think...

- Write a report on 'Problems related to existence of mango and mango-trees.'

Vehicles carrying mangoes

A wooden bullock cart can carry 200 kilograms of mangoes. But other vehicles carry mangoes or mango boxes as per shown in the table given below. The table also shows the speed of vehicles of each type. So that we can know about the distance of each type of vehicle can cover in one hour.

Look at the table and calculate :

- How many kg mangoes, each vehicle can transport in its seven trips ?
- How much distance is covered by a tractor in six hours ?
- How much time will be taken by a rikshaw-trailor to cover 60 kilometers ?

Type of vehicle	Transportation of mangoes in a trip	Speed of vehicle (distance covered in km in one hour)
Bullock-cart	200	4
Rickshaw-trailor	600	12
Tractor	800	20
Truck	6000	44

Some Big Numbers

You have learned about the number 'lakh' in your class IV mathematics textbook. You know that it is equal to 100 thousands. You also know that there are approximately one lakh bricklin in our country where bricks are made.

- Have you learned something else about the number lakh ?
- Write one thousand in number. Now write 100 thousands in number. How many zeroes are there in one lakh ?
- If there are 2 lakhs transportation vehicle in your area and half of them are trucks, write number of trucks in your area.
- If one fourth part of these vehicles are tractors, how many thousand of tractors are there ? Try and answer without writing.

You will be wondered to know that so many people are associated with business of mangoes. There may be one hundred lakh people in total, who grow mango-trees, grow mangoes and trasport the

mangoes to the marketing yard, sell mangoes around us and work in small or big mango related industry. 100 lakhs is also known as one crore.

- Where have you heard about one crore ? How is this number used ?
- Write the number one crore. Don't make mistake to write zeroes.

Fruit Market

Have you ever visited a market yard, fruit or vegetable market? If yes, do you know why is this noisy place known as market? The major fruit markets of the city are busy. A large stock of mangoes has arrived in many vehicles. The sellers are calling the customers are shouting. Speaking out the prices and praising their own mangoes.

Savjibhai - Come here ! Come here ! Buy this 'Valsadi Totapuri' at the rate of ₹ 40 per kg !

Mahipatbhai - Never so cheap ! Alphonso at the rate ₹ 60 per kg !

Madhuben is selling good quality 'Kesar' mango at rate ₹ 150 per kg.

Rajaram sells 'Langdo' mango at the rate of ₹ 50 per kg.

Look here..., this...side... Jaydeepsinh has brought fragrant raw kesar mangoes from Gir to be ripened at home in 8 kg box. He says that these mangoes will be ripened at your home in organic way and he will charge ₹ 1200/- per box.

Practice

- (1) At what price per kg, does Jaydeepsinh sell his kesar mangoes ?
- (2) Today Madhuben has sold 10 kg kesar mangoes. How much did she earn from that ?
- (3) Mahipatbhai has sold 6 kg Alphonso mangoes. Savjibhai has earned the same amount as Mahipatbhai. How many kg of 'Totapuri' mangoes have been sold by Savjibhai ?

(4) Raj has ₹ 100. He spent fourth part of the amount to buy Langdo mango. He spent rest of three fourth amount to buy kesar mangoes.

- (a) How many kg 'Langdo' mango he had bought ?
(b) How many kg 'kesar' mango he had bought ?

Try to speak rapidly

Here a tongue twister is given. Repeat it rapidly.

Raw mango, ripe mango, mango sour, mango sweet.

Raw mango, ripe mango, sour mango, sweet mango.

Sour mango, sweet mango, raw mango, ripe mango

mango sour, mango sweet, mango raw, mango ripe.

Women Amra Bank of Mango Producers

The meeting of women Amra Bank has just started. Madhuben is its chairman. This bank is established by 20 members. Every member saves ₹25 per month and deposit in the bank.

- How many rupees are collected by this group in every month ?
- How many rupees will be collected in 10 years ?

Practice

(a) Rekha borrowed a loan of ₹ 4000/-. She paid ₹ 345 to bank every month for a year. How many rupees did she pay to the bank ?
How many rupees are yet to be paid ?

(b) Mira and her brother borrowed a loan of ₹ 21,000/- to buy new plants of grafted mango-trees. They paid back ₹ 23,520/- in a year. How many rupees they would have paid every month ?

Earlier, women were not active in mango business. But now Madhuben and other women are engaged in mango business. Things are changing now. Their bank also helps them in that. These women are given employment oriented, business oriented, small scale industry at home related trainings to help them become self reliant and contribute to economic development of the family.

Why don't we start the business of preparing mango-pulp ?

Some women associated with women Amra Bank want to start a small scale industry of preparing mango-pulp at home. They have acquired a place from 'Panchayat' for it. They have saved ₹ 74,000/- last year. They made calculation of the amount of investment required to startup this new industry.

Madhuben prepared a list of required items before starting this work. These items should be purchased in the beginning of the work. The cost and number of items of these things are given in the following table. Find total expenditure.

Item	Cost for item	No. of items	Expense
Mixer-Grinder	₹ 3000	1	
Thermocol-ice-box for preserving and transporting Mango-pulp	₹ 2000	20	
Big pots	₹ 1000	4	
Tray and knife	₹ 300	20	
Bucket	₹ 75	20	

Total expenditure to start a business =

- When they extract pulp from mango, it weighs $\frac{1}{3}$ of a mango.
- They have planned to extract pulp from 6000 kg mangoes in a month.
- How much mango pulp will be prepared in a month ?

Madhuben-Let's calculate for first 6 kg mangoes.

For purchase of mangoes	₹ 15 per kg
For sale of mango-pulp	₹ 70 per kg

- If we extract mango-pulp from 6 kg mangoes, we get kg pulp.
- The total amount to be paid for 6 kg mangoes $6 \times \dots\dots\dots = ₹ 90$.
- Amount received by selling 2 kg mango-pulp $2 \times \dots\dots\dots = ₹ \dots\dots\dots$
- Therefore, the amount by selling the pulp prepared from 6 kg mangoes $₹ \dots\dots\dots - ₹ 90 = ₹ \dots\dots\dots$
- If we prepare mango-pulp of 6000 kg mangoes, the amount we earn $\times ₹ 1000$.

All women are very happy for this plan. Every women will get good profit and will get wages for the work done by them.

Anita - I have found out by another calculation that 1500 kg ice will be required every month. Its cost is ₹ 2 per kg. Therefore,

Monthly expense

(A) Ice $1500 \times ₹ 2 = ₹ \dots\dots\dots$

(B) Packaging charge and rickshaw fare = ₹ 3000

So, the total monthly expense of buying mangoes and selling mango pulp is ₹

Madhuben - Oh ! How nice ! From this calculation, we know that our bank will earn ₹ 44,000/- per month.

• Check, do you get the same answer ?

Find out

There are many beautiful songs about mangoes. Get words and tunes of such songs.

Shapes and Angles

Rohini and Mohini are twin sisters. They love doing the same things. One day when they were making shapes with matchsticks, Shaila gave them a challenge.

Rohini will make a shape.
Mohini has to make the same without looking at it, but she can ask questions.

Oh! That is so simple.

Rohini made this shape.

Mohini — Is it a closed shape or an open shape?

Rohini — It is a closed shape.

Mohini — How many sides are there?

Rohini — It has 6 sides.

Mohini made this.

Now you give the answers.

Is it a closed shape? _____. Does it have 6 sides? _____.

But it is not the same as the one made by Rohini. So Mohini tried again.

This is what she made.

Is it a closed shape with 6 sides? _____

Is it the same as the one made by Rohini? _____

Is there some way to say in what way these shapes are different?

* Mohini tried again but got different shapes. Guess and make two more shapes Mohini could have made.

Mohini is now tired of trying and asks Shaila what to do.

If you ask for the angles that the matchsticks make at the corners, you can do it.

Oh! So let us look for the angles.

* Look at the angles marked in these shapes. Can you see the difference?

Rohini

Mohini

See, how the matchsticks make a small angle, a big angle, and a bigger angle.

Wow! When the angle changes the shape changes so much.

It is important to encourage children to think about the way in which shapes can differ even when the number of sides is the same. This will help them to get a sense of how angles determine the shape of a polygon.

Practice Time

1) Look at the shape and answer.

* The angle marked in _____ colour is the biggest angle.

2 (a) Are the angles marked with yellow equal? _____

b) Are the angles marked with green equal? _____

c) Are the angles marked with blue equal? _____

3) Four different angles are marked in four colours. Can you find other angles which are the same as the one marked in red? Mark them in red. Do this for the other colours.

4) How many different shapes can you make by changing the angle between the matchsticks in each of these? Try.

a)

4 matchsticks

b)

8 matchsticks

c)

5 matchsticks

d)

7 matchsticks

e)

10 matchsticks

Matchstick Puzzles

- 1) Make 8 triangles using 6 matchsticks. Try!
- 2) Take 8 matchsticks and make a fish like this. Now pick up any 3 matchsticks and put them in such a way that the fish now starts swimming in the opposite direction. Did it?
- 3) Using 10 matchsticks make this shape. Pick up 5 matchsticks and put them in such a way that you get the shape of a house.

If you have not been able to solve these then look for the answers on page 29.

Angle Tester

How do we make equal angles?

Let us make an angle tester.

You also have an angle tester in your geometry box. It is called a divider.

* Cut two strips from a cardboard sheet.

* Fix them with a drawing pin or  such that both the strips can move around easily.

Rohini and Mohini went all around with the angle tester to look for different angles in their class.

Rohini tested the angle of the Maths book and the pencil box.

Look at the tester. It has opened like the letter L.

This is a **right angle**. We write it as **L**.

- * Go around with your tester and draw here those things in which the tester opens like the letter L. Are you sure they are all right angles?

Practice time

1) Look at the angles in the pictures and fill the table.

Angle	Right angle	More than a right angle	Less than a right angle
			✓
			
			
			
			

2) Sukhman made this picture with so many angles.

Use colour pencils to mark.

- * right angles with black colour.
- * angles which are more than a right angle with green.
- * angles which are less than a right angle with blue.

3) Draw anything of your choice around the angle shown. Also write what kind of angle it is. The first one is done.

Less than a right angle

Activity

a) Take a square sheet of paper.

b) Fold it in half.

c) Fold it once more and press it.

d) Open the last fold so that the sheet is folded in half.

e) Take one corner and fold it to meet the dotted line.

On the paper you will find lines making a right angle, an angle less than a right angle and an angle more than a right angle.

Look for each of the angles and mark them with different colours.

Activity — Angles with your body

Can you make these angles?

a) A right angle with your hand?

b) An angle less than a right angle with your leg?

c) An angle more than a right angle with your arm?

d) An angle more than a right angle with your body?

Try them out. It's fun! Draw them in your notebook using stick drawings like these.

Angle Garden

My angle dance shows the way!
When I see flowers for making honey, I
want to tell other bees. To show them the
way I start dancing. My dance shows the
angle between the sun and the flower.

Activity

Collect some leaves from the garden. Colour each
leaf and print it. Look at the angles on the leaves.
Which of them are more/less than a right angle?

I am a woodpecker.
My beak is sharp
because it has to
cut the wood.

Hey! Look at that bird.
Its beak has an angle
less than a right angle.

* Look for the birds which have beaks with small angles.

* In the picture mark angles between the two branches. Which two branches have the biggest angle?

Angles in Names

You know,
there are
angles in the
letters of our
names too.

SUKHMAN

In my name there are 11 right angles. There are also 10 angles less than a right angle.

* Write 3 names using straight lines and count the angles.

Name	Number of right angles	Number of angles more than a right angle	Number of angles less than a right angle

Activity

a) Put 10 Math-Magic books on top of each other. Keep one book slanting to make a slide.

b) Now do this with six books.

* Roll a ball from the top. From which slide does the ball roll down faster?

* Which slide has the smaller angle?

These are two slides in a park.

- * Which slide has a larger angle?
- * Which slide do you think is safer for the little boy? Why?

Changing Shapes

- * Things you need — used (or new) matchsticks. Piece of rubber tube used in cycle valves.

- i) Clean the black end of the matchsticks.

- ii) Cut small pieces of the tube (about 1 cm long).

- iii) Push two matchsticks into each end of a tube piece.

- iv) Add more matchsticks to form a triangle.

Now make these 4, 5, 6 sided shapes by using tube pieces and matchsticks.

* Find out how many angles are there in each of these shapes. Mark them.

Now push each shape downwards with the tip of your finger.

Does the angle change when pushed down by the finger?

* Find out and write your results in the table given.

Shape	Change in angle Yes/no

Shapes and Towers

Look for triangles in the pictures below.

- * From the activity 'Changing Shapes' can you guess why triangles are used in these towers, bridges etc?
- * Look around and find out more places where triangles are used.

Angle and Time

Zeenat, your watch does not have digits. How do you read time?

I just see the angles. See, when the hands make a right angle, I know it is 9 o'clock.

- * There are many times in a day when the hands of a clock make a right angle. Now you draw some more.

Triangles are shapes which are strong and do not change easily when pressed. In fact, children can also observe how different shapes are made stronger by using diagonal beams (like in the bridge) which divide shapes into triangles.

* Write what kind of angle is made by the hands at these times.
Also write the time.

* Draw the hands of the clock when they make an angle which is less than a right angle. Also write the time.

Answers: Matchstick Puzzles (page 19)

1.

2.

3.

Degree Clock

Appu and Kittu are playing carromboard. Appu hit the striker.

* In the picture three points A, B and C are shown. Draw a line to show from which point Kittu should hit to get the queen. _____

If you want, you can measure the angle in degrees using a degree clock. Degree is written as $^{\circ}$.

Activity: Making a degree clock

1. Cut a circle out of paper.

2. Fold it into half.

3. Fold it once again into a quarter.

4. Fold it once more.

5. Open the paper. You will see lines like this.

6. Now mark 0° , 45° , 90° and 180° as shown.

7. Paste it on an old card.

8. From the centre draw one hand.

9. Make a red hand with a thick paper and fix it to the centre with a drawing pin, so that it is free to move.

Your degree clock is ready.

* Use your degree clock to measure the right angle of your pencil box. _____ is the measure of the right angle.

* Can you guess how many degrees is the angle which is —

- $\frac{1}{2}$ of a right angle _____
- $\frac{1}{3}$ of a right angle _____
- 2 times of a right angle _____

90° is called
right angle.

* Measure the angle from where Kittu should hit the striker on page 30.

Angles in a Paper Aeroplane

1. Take a square sheet of paper.

2. Fold it in half and open it.

3. Fold the corners to the centre. Your paper looks like this.

4. Fold the green triangle such that P touches Q.

5. Fold the top two corners of this rectangle along the dotted lines.

6. Your paper will look like this. There is a small triangle in the picture which has to be folded up.

7. Turn it over and fold it in half along the dotted line.

8. Now, to make a wing fold the yellow edge over the red edge.

9. Turn it and do the same on the other side as well.

Your plane is ready to fly. How well does it fly?

* Find the angles of 45° and 90° when you open your plane.

In the aeroplane there are folds of 45° , 90° and other angles. The cut-outs of 30° and 60° are on the last page of the book. Children can be encouraged to measure various angles around them.

Angles with Yoga

Rahmat is doing Yoga. These are the pictures of different 'Asanas' he does everyday.

- * Estimate the measure of many angles as you can made by different parts of the body while doing 'Asanas'.

The D Game

You can play the 'D' game with your friends. You draw an angle. Your friend will guess the measure of that angle. Then you use your 'D' to measure it. The difference between the measured angle and the guess will be your friend's score. The one with the lowest score will be the winner.

Come on, play!

Draw Angle	Guess	Measure	Score

You can find this 'D' in your geometry box. Measure the angle on my head fan.

Take this opportunity to introduce the 'D' (protractor). Children will need some help to read the measure of the angle, but they need to do so only approximately.

How Many Squares?

- * Measure the side of the red square on the dotted sheet. Draw here as many rectangles as possible using 12 such squares.
- * How many rectangles could you make? _____

Here's one!

Each rectangle is made out of 12 equal squares, so all have the same area, but the length of the boundary will be different.

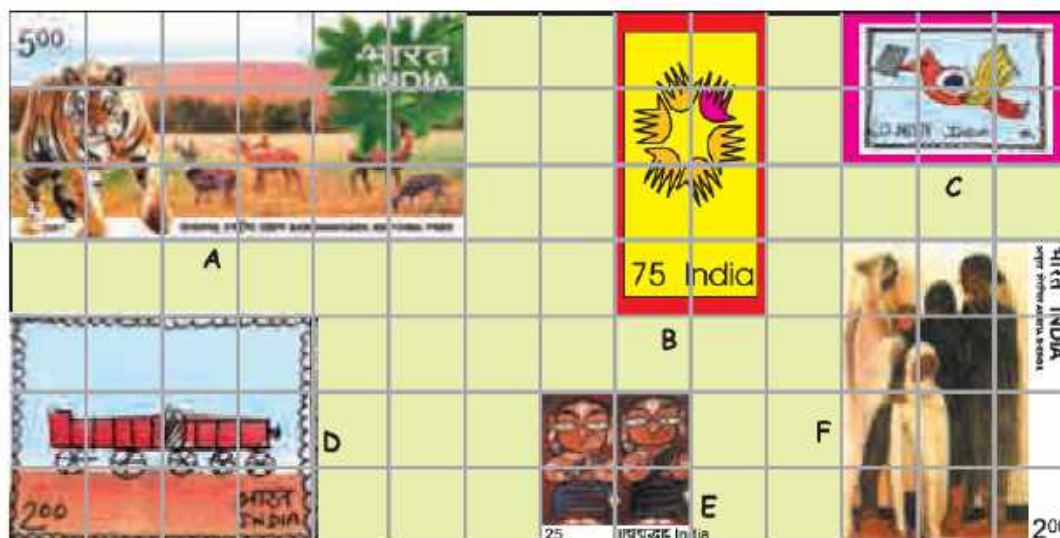

Length of the boundary is called **perimeter**.

- * Which of these rectangles has the longest perimeter?
- * Which of these rectangles has the smallest perimeter?

Children are not expected to learn the definition of the term 'area', but develop a sense of the concept through suitable examples. Give them many opportunities in the classroom to compare things in terms of area and guess which is bigger. Things like stamps, leaves, footprints, walls of the classroom etc. can be compared.

Measure Stamps

Look at these interesting stamps.

- a) How many squares of one centimetre side does stamp A cover? _____

And stamp B? _____

- b) Which stamp has the biggest area?

How many squares of side 1 cm does this stamp cover?

How much is the area of the biggest stamp? _____ square cm.

- c) Which two stamps have the same area? _____

How much is the area of each of these stamps? _____ square cm.

- d) The area of the smallest stamp is _____ square cm.

The difference between the area of the smallest and the biggest stamp is _____ square cm.

Collect some old stamps. Place them on the square grid and find their area and perimeter.

Stamp D covers 12 squares. Each square is of side 1 cm. So the area of stamp D is 12 square cm.

Guess

- a) Which has the bigger area — one of your footprints or the page of this book?
- b) Which has the smaller area—two five-rupee notes together or a hundred-rupee note?

- c) Look at a 10 rupee-note. Is its area more than hundred square cm?
- d) Is the area of the blue shape more than the area of the yellow shape? Why?

- e) Is the perimeter of the yellow shape more than the perimeter of the blue shape? Why?

How Big is My Hand?

Trace your hand on the squared sheet on the next page.

How will you decide whose hand is bigger — your hand or your friend's hand?

What is the area of your hand?
_____ square cm.

What is the area of your friend's hand? _____ square cm.

My footprint is longer!

But my footprint is wider. So whose foot is bigger?

My Footprints

- * Whose footprint is larger — yours or your friend's?
- * How will you decide? Discuss.
- * Is the area of both your footprints the same?

My skin has many folds. So I have a big area! This way the air all over me keeps me cool.

Baby Rhino

What is the area of my footprint?

What is the area of my footprint?

- * Guess which animal's footprint will have the same area as yours. Discuss.
- * Here are some footprints of animals — in actual sizes. Guess the area of their footprints.

Hen

Dog

Make big squares and rectangles like this to find the area faster.

Tiger

At this stage children need not count each square. Encourage them to identify the largest squares and rectangles within a footprint to know their area and then count small squares for irregular shapes. Though area of a rectangle will be done in chapter 11, some children may discover themselves that they can find the area faster through multiplication.

How Many Squares in Me?

What is the area of this triangle?

The triangle is half the rectangle of area 2 square cm. So its area is ____ square cm.

Is this shape half of the big rectangle?

Hmmm..... So its area is ____ square cm.

* Write the area (in square cm) of the shapes below.

In this exercise children are expected to notice the geometrical symmetry of the shapes to find out their area. Encourage children to evolve their own strategies. Rounding off is not needed in these examples.

Try Triangles

Both the big triangles in this rectangle have the same area.

Sameena

But these look very different.

Sadiq

The blue triangle is half of the big rectangle. Area of the big rectangle is 20 square cm. So the area of the blue triangle is _____ square cm.

And what about the red triangle?

Ah, in it there are two halves of two different rectangles!

Now you find the area of the two rectangles Sadiq is talking about. What is the area of the red triangle? Explain.

Yes you are right. And you know what!! You can draw many more triangles of area 10 square cm in this rectangle. Try drawing them.

Help Sadiq in finding some more such triangles. Draw at least 5 more.

Complete the Shape

Suruchi drew two sides of a shape. She asked Asif to complete the shape with two more sides, so that its area is 10 square cm.

He completed the shape like this.

How did you do this?

Oh that's easy! If you look at the green area it is 4 square cm. Below it is the yellow area of 6 square cm. So the area of my shape is 10 square cm!

* Is he correct? Discuss.

* Explain how the green area is 4 square cm and the yellow area is 6 square cm.

Oh, I thought of doing it differently! If you draw like this, the area is still 10 square cm.

- * Is Suruchi correct? How much is the blue area? Explain.
- * Can you think of some other ways of completing the shape?
- * Try some other ways yourself.
- * Now ask your friends at home to solve these.

Every time guests come home, I ask them to do this. But why do they run away!

Practice time

- 1) This is one of the sides of a shape. Complete the shape so that its area is 4 square cm.

- 2) Two sides of a shape are drawn here. Complete the shape by drawing two more sides so that its area is less than 2 square cm.

Children can be encouraged to make shapes with either straight edges or curved edges to cover the given area. This exercise can be extended by asking children to draw on squared paper as many shapes as they can of a given area and making guesses for the largest or the smallest perimeter. They can also be asked to check their guesses by measuring the dimensions of the shapes. In case of curved edges, thread can be used for measuring the perimeter.

3) Here is a rectangle of area 20 square cm.

- Draw one straight line in this rectangle to divide it into two equal triangles. What is the area of each of the triangles?
- Draw one straight line in this rectangle to divide it into two equal rectangles. What is the area of each of the smaller rectangles?
- Draw two straight lines in this rectangle to divide it into one rectangle and two equal triangles.

- * What is the area of the rectangle?
- * What is the area of each of the triangles?

Puzzles with Five Squares

Measure the side of a small square on the squared paper on page 45. Make as many shapes as possible using 5 such squares. Three are drawn for you.

- How many different shapes can you draw? _____
- Which shape has the longest perimeter? How much? _____ cm
- Which shape has the shortest perimeter?
How much? _____ cm
- What is the area of the shapes?
_____ square cm. That's simple!

Did you get all the 12 shapes using 5 squares?

All 12 shapes are arranged here to make a rectangle.

This is a 10 X 6 rectangle as there are 10 rows and 6 columns.

You will be surprised to know that there are more than 2000 ways in which these shapes make a 10 X 6 rectangle.

Draw all the 12 shapes on a sheet of cardboard and cut them.

Try to arrange your 12 shapes in some other way to make a 10×6 rectangle. Could you do it?

Try another puzzle

You have to make a 5×12 rectangle with these 12 shapes. There are more than 1000 ways to do it. If you can find even one, that's great!

Game Time

Here is a chessboard. Play this game with your partner, with one set of 12 shapes.

The first player picks one shape from the set and puts it on the board covering any five squares.

The other player picks another shape and puts it on the board, but it must not overlap the first shape.

Keep taking turns until one of you can't go any further.

Whoever puts the last piece wins!

Make Your Own Tile

Remember the floor patterns in Math-Magic Book 4 (pages 117-119). You had to choose the correct tile which could be repeated to make a pattern so that there were no gaps left.

Encourage children to try to do these 'pentomino' puzzles at home. Such exercises can be designed for shapes with 6 squares (hexominoes) in which case there will be 35 different shapes possible.

Ziri went to a shop and was surprised to see the different designs of tiles on the floor. Aren't these beautiful!

* Can you find the tile which is repeated to make each of these floor patterns? Circle a tile in each pattern.

After looking at the patterns Ziri wanted to make her own yellow tile. You too make a tile this way.

Step 1: Take a piece of cardboard or thick paper. Draw a square of side 3 cm on it.

Step 2: Draw a triangle on any one of the sides of this square.

Step 3: Draw another triangle of the same size on another side of the square. But this time draw it inside the square.

Step 4: Cut this shape from the cardboard. Your tile is ready!

What is its area?

Make a pattern using your tile. Trace the shape to repeat it on a page, but remember there must be no gaps between them.

Ziri made a pattern using her yellow tiles. (You know the area of her tile.)

Answer these —

- * How many tiles has she used?
- * What is the area of the floor pattern Ziri has made here?

Practice time

Ziri tried to make some other tiles. She started with a square of 2 cm side and made shapes like these.

Look at these carefully and find out:

- * Which of these shapes will tile a floor (without any gaps)? Discuss. What is the area of these shapes?

- * Make designs in your copy by tiling those shapes.
- * Now you create your own new tiles out of a square. Can you do the same with a triangle? Try doing it.

In Class III and IV basic shapes like squares, rectangles, hexagons, triangles, circles etc were used to examine which of those can tile and which do not tile to make floor patterns. Children must now be able to modify basic shapes to create different tiling shapes. In the exercise above they may create new shapes out of a square that do not tile even though their area remains the same as that of the square from which they are made.

4

Parts and Wholes

Our Flag

You must have seen the flag of our country. Do you know how to draw the flag?

Draw a rectangle of length 9 cm and width 6 cm. Divide it into three equal parts and complete the flag.

The top one-third of our flag is saffron (or orange). What is the colour of the middle one-third of the flag? Where will you draw the Ashoka chakra?

How much of the flag will you colour green?

Is the white colour now less than $\frac{1}{3}$ of the flag? Why?

Now look at this flag. How much of it is black? _____

The green part of the flag can be written as _____

Is red less than one-third of the flag? Why?

The flag of Afghanistan

This is the flag of Myanmar, our neighbour.

Is blue more than one-fourth of the flag or less?

Guess how much of the flag is red. Is it more than $\frac{1}{2}$? Is it more than three-fourths?

Because of the blue chakra in the white part of the Indian flag, the white colour is a little less than $\frac{1}{3}$. There can be some discussion on this point.

Find out

Collect as many flags as you can.

How many flags have three colours? Are all the coloured parts equal in these flags?

This is the flag of the Math Club in a school in Kerala. What part of the flag is coloured red? What part is green?

See this black  logo. Draw it.

Is there a Math Club in your school? If not, ask your teacher how to set it up. Design a flag for your Math Club. Draw it here.

Have you used the red colour? What part of the flag did you colour red?

What were the other colours you chose?

Math Club can be set up in the school in which interesting activities can be taken up like making puzzles, shapes with tangrams, maps of buildings, looking for different geometrical shapes and angles in the environment, calculating area and perimeter of a school ground, etc.

Magic Top

Let us make a magic top.

Take a cardboard piece.

Draw a circle of radius 3 cm and cut it out.

Divide the circle into 8 equal parts. Now each part is $\frac{1}{8}$ of the circle.

Colour $\frac{2}{8}$ red, $\frac{1}{8}$ orange, $\frac{1}{8}$ yellow etc. as shown here. Push a matchstick through the centre of the circle.

Your magic top is ready. Spin it fast!

What do you see? Can you see all the colours? Write what you see in your notebook.

Practice time

A) Chocolate bar

Manju had a chocolate. She gave one-fourth of it to Raji, one-third to Sugatha and one-sixth to Sheela. She ate the remaining part. How many pieces of chocolate did each get? Write here.

Raji

Sugatha

Sheela

Manju

What part of the chocolate did Manju eat?

B) Colour the hats

Colour $\frac{1}{3}$ of the hats red.

Colour three-fifth hats blue.

How many hats did you colour red?

How many hats did you colour blue?

What part of the hats are not coloured?

C) Equal parts of a triangle

The white triangle is divided into three equal parts. Fill each one-third part with a different colour. Can you show that these parts are equal? Think how.

D) Six parts of a rectangle

Rani has divided a green rectangle into six equal parts like this.

- ✱ Now you divide each of these rectangles into six equal parts. Use a different way for each of the three rectangles.

Discuss

- ✱ How will you check that each part is really one-sixth of that rectangle?
- ✱ The green rectangle is bigger than the blue one. Can we say that $\frac{1}{6}$ of the green rectangle is bigger than $\frac{1}{6}$ of the blue rectangle?

Greedy Gatekeepers

Remember Birbal, the clever minister of King Akbar? (Maths Magic Class IV, page 14) Do you know how he became a minister?

Birbal was then a young boy living in a village. He was very clever and could write poetry.

He thought he would try his luck in the King's court. So he took some of his poems and set off for the city.

When he reached the outer gate of the palace, he was stopped by

the gatekeeper. "Hey! Stop there! Where are you going?", shouted the gatekeeper.

"I am a poet. I want to see King Akbar and show my poems to him", replied the poet.

"Oh, you are a poet! The king is kind, he will surely give you a prize. I will let you in if you give me $\frac{1}{10}$ of your prize".

Young Birbal agreed since he had no other way.

When he went in, the gatekeeper calculated "If he gets 100 gold coins I will get _____ gold coins".

The poet came to a second gatekeeper.

This gatekeeper also said, "I will let you in if you give me **two-fifth** of your prize". The poet agreed.

The gatekeeper happily calculated, "The poet will get at least 100 gold coins so I will get _____ gold coins!"

The poet reached the last gate. The gatekeeper said, "I will allow you to see the king only if you give me **half** of the prize that you get". The poet had no other way. He agreed and went inside.

The gatekeeper thought, "Today is a great day. If he gets 100 gold coins I will get _____ gold coins. But if he gets 1000 coins — wow! I will get _____".

The king was very happy with the poems and said, "Your work is very good. You can ask anything as your prize".

"My Lord, I want 100 slaps". "What! 100 slaps? ____". The king was shocked —

* What happened after that? Complete the story. What part of the prize did the poet get?

Patterns in Parts

$\frac{8}{16}$ blue, $\frac{8}{16}$ white

- 1) Make different patterns by colouring some squares in the grids B, C, D. What part of the grid did you colour? What part of the grid remained white? Write.

- 2) Look at grid A again. Is the grid coloured —

- a) $\frac{1}{2}$ blue, $\frac{1}{2}$ white? b) $\frac{2}{4}$ blue, $\frac{2}{4}$ white?
c) $\frac{3}{8}$ blue, $\frac{5}{8}$ white? d) $\frac{4}{8}$ blue, $\frac{4}{8}$ white?

Mark (X) on the wrong answer.

- 3) Draw grids of 16 squares and make patterns with

- a) $\frac{2}{8}$ red, $\frac{1}{2}$ yellow, $\frac{1}{4}$ green
b) $\frac{3}{16}$ blue, $\frac{5}{16}$ red, $\frac{1}{2}$ yellow

Ramu's Vegetable Field

Ramu's vegetable field has 9 equal parts. What vegetables does he grow?

- 1) Which vegetable grows in the biggest part of his field?
What part?
- 2) On what part of the field does he grow potatoes?
- 3) What part of the field is used to grow spinach?
What part is used for brinjals?
- 4) Now you write some questions by looking at
this picture.

- * Ramu wanted to give these vegetables to his friends. He gave Aboobacker one-fifth of these tomatoes and $\frac{1}{3}$ of the potatoes. Srija got $\frac{2}{5}$ of the tomatoes and $\frac{3}{6}$ of the potatoes. Nancy got the rest of these vegetables. Circle Aboobacker's share in blue. Circle Srija's share in yellow.

- * How many potatoes and tomatoes did Nancy get?

1) *Divide the white area in square A into two equal parts.*

Got the answer? Was that easy?

Now do the second question.

2) *Divide the white area in square B into three equal parts!*

That too is easy, isn't it?

Now see the third question.

3) *Divide the white area in square C into four equal parts!!*

Is it a bit difficult? Don't worry, take your time.

Only if you have given up, look for the answer.

Here comes the last question .

4) *Divide the white area in square D into seven equal parts!!!!*

The world record for this is 7 seconds. But you can take minutes!

Tired of thinking? Look for the answer on page 68.

So was that difficult??

Guess and Check

A) What part of each shape is coloured?

First guess the answer, then check.

(1)

(2)

The colouring circle game and many more such activities should be done in class. The follow-up discussions for all these activities will play a major role in developing children's conceptual understanding about fractions.

Game: Who Colours the Circle First?

This game is to be played in groups of 4. Each player has to make a circle as shown. Each one has to make 15 tokens on slips of paper. Write $\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{4}$ $\frac{1}{6}$ $\frac{1}{12}$ $\frac{2}{12}$ $\frac{3}{12}$ $\frac{4}{12}$ $\frac{11}{12}$ to make your tokens.

Shuffle the tokens and make a pile in the middle of the group. Now you are ready to start the game.

The first player takes a token from the pile, colours that part of the picture, and puts the token under the pile. The next player does the same, and so on. The winner is the one who first colours the circle completely.

- * Who won the game?
- * What are the winner's tokens?
- * Write the tokens you got.
- * What part of the circle did you colour?

The Card Puzzle

Look carefully at the picture and get ready to answer four questions. Ready?

(3)

(4)

B) Do you remember this picture? Look at the small triangle. What part of the square is it? How will you find this out?

Divide the big triangles and other shapes into small triangles (like the red one). How many small triangles are there altogether?

Coloured Parts

Complete these

1

This circle is divided into two equal parts. Out of ____ equal parts one part is coloured blue.

2

Here the circle is divided into ____ equal parts. Out of ____ equal parts, ____ parts are coloured blue.

3

Here the circle is

.....

4

Here the circle is

.....

So we can say that $\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$

Cutting the Halwa

Ramesh bought a piece of halwa for his children Ammu and Anu.

He divided it equally for them.

* Each will get _____ part of halwa.

"This piece is too big. We can't eat it", they said.

So he divided the pieces into half again. Now how many pieces will Ammu get? _____

* What part of the halwa is it? _____

"Make it even smaller, Dad" they asked.

So he again cut the halwa into smaller pieces.

"Ok, thank you, Dad."

- ✱ Now how many pieces will each get?
- ✱ What part of the halwa is each piece now?
- ✱ If Ramesh had cut the halwa into 6 equal parts how many pieces would each have got? Look at your answers for questions 1 to 4 and write —

$$\frac{1}{2} = \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

Parts of the Strip

Look at the picture. Write what part of the strip is each green piece. Write the part for a piece of each colour.

How many one-fourths will make a half?

How many $\frac{1}{8}$ will make $\frac{1}{4}$?

How many $\frac{1}{8}$ are in $\frac{1}{2}$?

Now ask your friends some questions on the same picture.

Patterns

Look at this square.

What part is coloured blue?

What part is green?

Puzzle: Is it Equal?

Ammini says half of half and one-third of three-quarters are equal. Do you agree? How will you show this?

The use of concrete things (such as matchsticks, bottle caps etc.) will help children make sense of equivalent fractions such as $\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8} = \frac{5}{10}$. Children must make their own fraction strips using papers of different sizes. Encourage them to compare the strips by colouring them into different fractions.

From a Part to the Whole

- 1) This shows $\frac{1}{5}$ petals of a flower.
Complete the flower by drawing the other petals.

- 2) The picture shows one-third of the blades of a fan. Complete the picture by drawing the other blades.

- 3) Half of the blades of another fan are shown here. Complete the picture by drawing the other half. How many blades have you drawn?

Rupees and Paise

How many 50 paise coins will make one rupee?

Is 50 paise half of one rupee?

How many 20 paise coins will make ten rupees?

One rupee is _____ part of ten rupees.

How many 20 paise coins will make ten rupees?

Two rupees is _____ part of ten rupees.

How many 20 paise coins will make ten rupees?

Five rupees is _____ part of ten rupees.

Arun's Time Table

[illegible]

Use different colours to show

Studying: $\frac{1}{4}$ of a day

Sleeping? hours

Studying? hours

Playing? hours

A cartoon illustration of a woman with a bindi, wearing a green and yellow polka-dot sari, standing with her hands on her hips. A speech bubble next to her says: "Arun sleeps at 10 pm and wakes up at 6 am. He plays from 7 to 8 am and again from 4 to 6 pm." Below the speech bubble is a cricket bat and a round alarm clock.

Arun sleeps at 10 pm and wakes up at 6 am. He plays from 7 to 8 am and again from 4 to 6 pm.

One day is 24 hours. Then how will I find out one third of a day?

An Old Woman's Will

Once there lived an old woman. She lived with her three daughters. She was quite rich and had 19 camels. One day she fell ill. The daughters called the doctor. The doctor tried his best but could not save the woman. After her death, the daughters read what she had written in her will.

My eldest daughter will get $\frac{1}{2}$ of my camels
My second daughter will get $\frac{1}{4}$ of my camels
My third daughter will get $\frac{1}{5}$ of my camels

The daughters were really puzzled. "How can I get $\frac{1}{2}$ of the 19 camels?" asked the eldest daughter.

"Half of 19 is nine and a half. But we can't cut the camel!" The second daughter said.

"That is right. But what will we do now?" asked the third daughter".

Just then they saw their aunt coming. The daughters told her their problem.

"Show me the will. I have an idea. You take my camel. So you have 20 camels. Now can you divide them as your mother wanted?" the aunt said.

"You want half of the camels, don't you? Take 10 camels" she said to the eldest daughter.

"Take your share", the aunt told the second daughter. She took one-fourth of the camels and got ____ camels.

"You can take one-fifth of the camels", the aunt told the third daughter. She got ____ camels. The daughters were very happy and counted their camels $10 + ___ + ___ = 19$.

School Magazine

A school has decided to bring out a magazine every quarter of the year. How many magazines will they have in a year? If they want to print it at the end of each quarter of a year, which are the months for printing? Mark the number for those months.

1	2	3	4	5	6	7	8	9	10	11	12
---	---	---	---	---	---	---	---	---	----	----	----

Sleeping Beauty!

Have you heard of Kumbhakarna, the brother of Ravana? He is famous for sleeping for half a year.

Most people sleep about 8 hours a day.
Then what part of a day is it? _____

So what part of a year do they sleep? A
person 60 years old must have slept
_____ years!!!

Answer: Card Puzzle (page 61)

Did you get stuck on square D?
Actually that was the easiest!!

Children should be encouraged to think of what part of a day they spend in different activities. They should be sensitive about those children who have to spend a large part of the day working or helping at home. They should also be encouraged to think about parts of a year.

Keerti's Shopping List

Look at the yellow price list.

- How much does 2 kg of tomato cost?
- How much does $\frac{1}{2}$ kg of tomato cost?
- Kiran wants $2\frac{1}{2}$ kg of tomato. How much will it cost?
- How much does $3\frac{1}{2}$ kg potato cost?
- What is the price of $1\frac{1}{4}$ kg of carrot?
- He bought a gourd of weight $4\frac{3}{4}$ kg and it costs _____
- Look at the shopping list in Keerti's hand. How much will she have to pay to buy all of these?
- Make a bill of your own for vegetables you want to buy. Find the total money you will have to pay.

Item	Price in ₹ (per kg)	Amount
Total		

Children should be encouraged to bring samples of real price lists and bills to discuss in the classroom.

Practice time

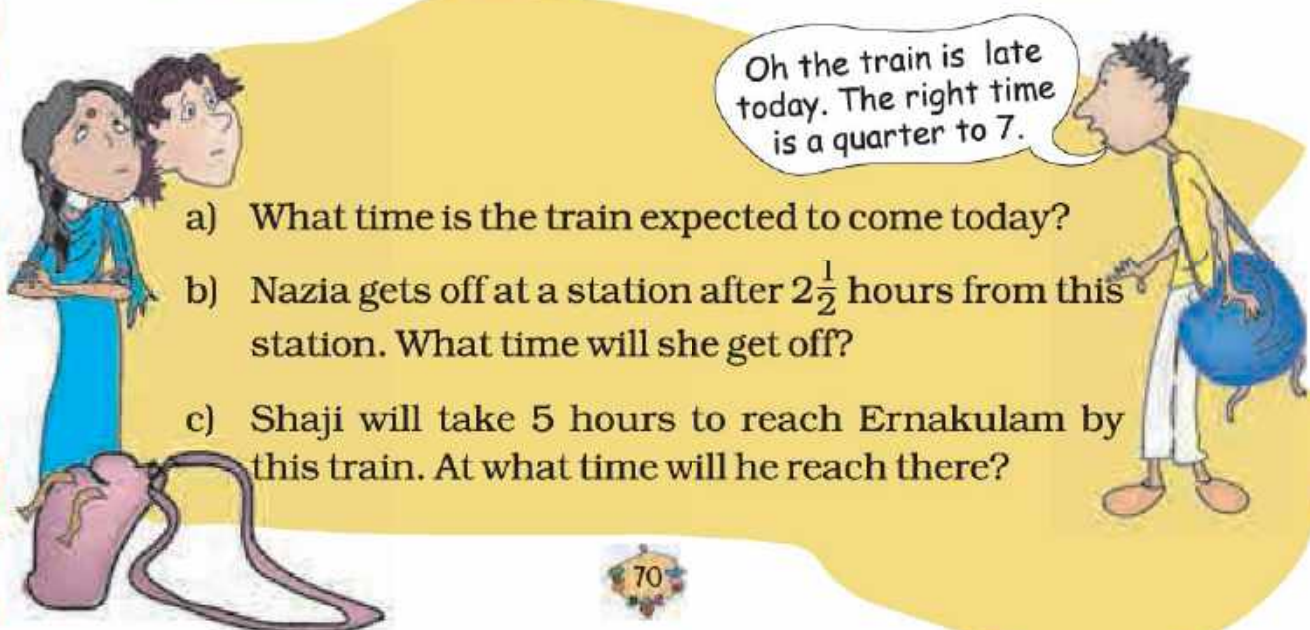

1) Raheem's journey

Raheem has to travel $1\frac{1}{4}$ km to reach school. What distance does he travel to go to school and come back home ?

2) What coins?

Latha bought a pencil and a pen for seven and a half rupees. She gave ₹ 10/-. The shopkeeper gave back the money in coins of half and one rupee. What are the coins she got ?

3) At the railway station

5

Does it Look the Same?

art & design

Let's Make Patterns From a Drop of Colour

I have made these patterns from a drop of colour! You can make them too.

Pattern A

Pattern B

Make your pattern

Take a sheet of paper

Fold it into half

Open the fold and put a drop of colour on the middle line

Fold it twice and press it to spread the colour

Open it and see a beautiful pattern

Can you cut this pattern in such a way that you get two similar mirror halves? In how many ways can you do it?

Look at this pattern.

The dotted line divides the shape into two halves. But if you fold it along the dotted line, the left half does not cover the right half completely. So the two halves are not mirror halves.

Now look at another shape.

If you fold it along the dotted line, one half will cover the other similar half completely. So the two here are mirror halves.

Now imagine the same for these pictures.

On the next page, children need to understand that even though the shape is symmetric, the colour scheme of the figure can make it asymmetric (e.g. in shapes 10 and 12). Encourage children to look for asymmetry based on the shape as well as the colour scheme.

* Which shapes are divided into two mirror halves by the dotted line?

Mirror Games

1. Here is a picture of a dog. You can place a mirror on the dotted line. Then the part of the dog to the right of the line will be hidden behind the mirror. What you will see is like (a).

Look at the figure in the white box. On which of the dotted lines will you keep the mirror so that you get shape (b)? Also tell which part of the picture will be hidden when we keep the mirror on the dotted line.

Now make a line on the white box to show where you will keep the mirror to get the picture next to it.

2. Venky has made a red and white shape. Make a line on the white box where you will keep a mirror to get that shape. Look at how the line is drawn in the first box to get the picture next to it.

(a)

(b)

(c)

(d)

(e)

Encourage children to look at the final picture in each pair and guess where the line of symmetry should be made on the original shape in the white box.

Half a Turn

Once there was a king. He was upset because thieves kept stealing costly jewels from his locker. Here is what the locker looked like:

The locker could be opened by giving its handle half a turn. Another half turn and the locker would be locked again.

The king would often leave the locker open thinking it was locked. Can you guess the reason?

One day his clever daughter gave him an idea which he liked very much. Now he never got confused.

Can you guess what the idea was?

The king's daughter asked the king to put a dot on one of the yellow blades.

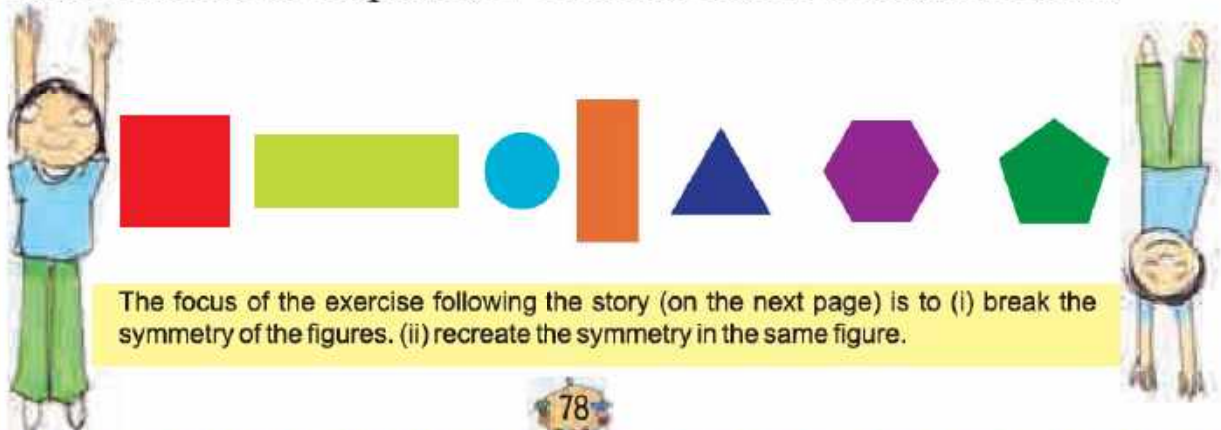

The king had many such lockers with different handles. Check if, on giving them half a turn, he can get confused with these too.

What will you do to solve the problem for each of these?

Same after $\frac{1}{2}$ turn?

Guess which of the shapes below would look the same after half a turn.

The focus of the exercise following the story (on the next page) is to (i) break the symmetry of the figures. (ii) recreate the symmetry in the same figure.

Do you find it difficult to tell? If yes, then there is a way to check your guess. Here's how you can do it.

Take any of the shapes. Trace its outline on a sheet of paper. Now keep the shape on its outline and give it a half turn. See if the shape fits its outline.

Practice time

- 1) Find out which letters in the English alphabet look the same after half a turn.

- 2) Which of these English words reads the same on half a turn?

ZOOM, MOW, SWIMS, SIS, NOON

- 3) Give half a turn to the numbers from 0 to 9. Find which of them still looks the same.

- 4) Think of all 2, 3 and 4 digit numbers which look the same on half a turn.

Example

2 digit numbers 11, _____, _____

3 digit numbers 101, 111, _____, _____, _____,
_____, _____, _____

4 digit numbers 1001, 1111, _____, _____, _____,
_____, _____

5) Which among the following pictures will look the same on half a turn?

Activity Time

Have you ever seen a windmill? What is it used for?

Let us make a toy windmill.

1. Take a sheet of paper.
2. Fold it as shown in the picture.
3. Cut out the blue part of the paper. Your sheet of paper will now look like a square.

4. Fold it along the red lines and then open the fold. Draw a circle on the sheet as shown in the picture.

5. Cut along the red lines till you reach the circle. The paper will look like this.

6. Take a pin and make holes on the four corners as shown in the picture.

7. Now fold the corners such that all the holes lie one on top of the other.

8. Pass the pin through the holes and fix it in the stick.

Your windmill is ready. Run with it and see how fast it moves.

* Does your windmill look the same on $\frac{1}{4}$ of a turn?

* Does it look the same on half a turn? Discuss.

One-fourth Turn

Does the fan look the same on $\frac{1}{4}$ turn?

Before turning it

After $\frac{1}{4}$ turn

Will this fan also look the same after $\frac{1}{4}$ turn? Draw in the yellow box.

Before turning it

After $\frac{1}{4}$ turn

Practice time

- A) * Among the following shapes, find out which ones would look the same after $\frac{1}{4}$ turn. Put a (✓).
 * Put a (X) on the shapes that will not look the same after half a turn.

B) Try and change the shapes in such a way that the new shape remains the same on giving it half a turn.

C) Draw what the following shapes would look like on $\frac{1}{4}$ turn and half a turn.

On $\frac{1}{4}$ turn

On half turn

Which of the above shapes do not look the same on $\frac{1}{4}$ turn? Which shapes do not look the same on $\frac{1}{2}$ a turn?

* Which fan will look the same on a $\frac{1}{3}$ turn?

* Draw this shape after $\frac{1}{3}$ turn.

Shape after $\frac{1}{3}$ turn

One-sixth Turn

Can you see that this shape looks the same on $\frac{1}{6}$ turn?

Practice Time

- Look at the following shapes. Draw how they will look on $\frac{1}{3}$ and $\frac{1}{6}$ turn.

	$\frac{1}{3}$ turn	$\frac{1}{6}$ turn

Encourage children to look at the figure and see what kind of a symmetry there is. If they need they can draw six lines to see how to rotate a figure through $\frac{1}{6}$ turn. They should also be able to see that a figure which looks the same on $\frac{1}{6}$ turn will also look the same on $\frac{1}{3}$ turn (which is the same as two $\frac{1}{6}$ turns).

2. Look at the following shapes —

a) Find out which of these figures look the same on $\frac{1}{3}$ turn. Mark them with (✓).

b) Which are the ones that will not look the same after $\frac{1}{3}$ turn? Mark them with (X).

c) Try and change the shapes below in such a way that they look the same on $\frac{1}{3}$ turn.

3. Draw some shapes which will look the same after $\frac{1}{3}$ turn.

4. Draw some shapes which will look the same after $\frac{1}{6}$ turn.

6

Be My Multiple, I'll be Your Factor

The Mouse and the Cat

The hungry cat is trying to catch Kunjan the mouse. Kunjan is now on the 14th step and it can jump 2 steps at a time. The cat is on the third step. She can jump 3 steps at a time. If the mouse reaches 28 it can hide in the hole. Find out whether the mouse can get away safely!

a) The steps on which the mouse jumps —

b) The steps on which the cat jumps —

c) The steps on which both the cat and the mouse jump —

d) Can the mouse get away?

Find out

If the cat starts from the 5th step and jumps five steps at a time and the mouse starts from the 8th step and jumps four steps at a time, can the mouse get away?

Children should be encouraged to make similar questions with different multiples and ask each other to solve.

Who is Monto waiting for?

Monto cat is waiting for somebody. Do you know for whom he is waiting? There is a trick to find out.

1	2	3	D 4	5	6	7	X 8	9	10
11	M 12	13	14	15	16	P 17	18	19	I 20
21	22	23	O 24	25	26	27	28	29	30
R 31	32	33	N 34	35	36	37	38	39	40
41	42	43	B 44	W 45	46	47	S 48	49	50
J 51	52	53	54	55	H 56	57	58	59	E 60

Mark with a red dot all the numbers which can be divided by 2.

Mark a yellow dot on the numbers which can be divided by 3 and a blue dot on the numbers which can be divided by 4.

Which are the boxes which have dots of all three colours?

What are the letters on top of those boxes?

Write those letters below in order.

Meow Game

To play this game, everyone stands in a circle. One player calls out 'one'. The next player says 'two' and so on. A player who has to call out 3 or a number which can be divided by 3 has to say 'Meow' instead of the number. One who forgets to say 'Meow' is out of the game. The last player left is the winner.

Which numbers did you replace with 'Meow'?

3, 6, 9.....

We say these numbers are the **multiples** of 3.

Play the game by changing the number to 4.

Now, which numbers did you replace with 'Meow'?

These numbers are the multiples of 4.

* Write any ten multiples of 5.

Make children play this game several times with multiples of different numbers.

Dice Game

Throw two dice together. What are the numbers that turn up on the faces of the dice? Make a two-digit number using them. If it is a multiple of any of the numbers written next to the circles, you can write it in that circle. Then it is your friend's turn. The one who can write more numbers in 10 rounds is the winner.

I have 3 and 2 on my dice. If I make 23, it is not the multiple of any of the numbers. So I will make 32, which is a multiple of 4, and write it in the red circle.

A large yellow area with a wavy border containing four empty circles for writing. Each circle is associated with a number:

- Top-left circle: 6
- Top-right circle: 4
- Bottom-left circle: 5
- Bottom-right circle: 7

At the bottom center of the yellow area is a small decorative icon with the number 90.

Common Multiples

Think of a number. If it is a multiple of 3 write it in the red circle.
If it is a multiple of 5 write it in the blue circle.

Where do I write 15? It is a multiple of both 3 and 5.

Some numbers are multiples of both 3 and 5.

So we can say that they are **common** to both 3 and 5.

Think! If you write the multiples common to 3 and 5 in the purple part, then will they still be in both the red and the blue circles?

* Which is the smallest among these **common multiples**? _____

Repeat the game using the numbers 2 and 7.

* Write the common multiples of 2 and 7.

Repeat the game by putting the multiples of 4, 6 and 5 in the circles.

- * What common multiples of 5 and 6 did you write in the green part?
- * What common multiples of 4 and 6 are written in the orange part?
- * In which coloured part did you write the common multiples of 4, 6 and 5?
- * What is the smallest common multiple of 4, 6 and 5? _____

Puzzle

Tamarind seeds

Sunita took some tamarind (*imli*) seeds. She made groups of five with them, and found that one seed was left over. She tried making groups of six and groups of four. Each time one seed was left over. What is the smallest number of seeds that Sunita had?

Encourage children to try out themselves such activities using seeds, pebbles etc.

More tamarind seeds

Ammini is arranging 12 tamarind seeds in the form of different rectangles. Try to make more rectangles like this using 12 tamarind seeds. How many different rectangles can you make?

If there are 15 tamarind seeds how many rectangles can you make?

Colouring the Grid

In the grid here, a rectangle made of 20 boxes is drawn.

The width of this rectangle is 2 boxes.

- * What is its length?
- * Colour a rectangle made of 20 boxes in some other way.

- * What is the length and width of the rectangle you coloured?
- * In how many ways can you colour a rectangle of 20 boxes? Colour them all in the grid, and write the length and width of each rectangle you have coloured.

Bangles

There are 18 bangles on the rod. Meena is trying to group them. She can put them in groups of 2, 3, 6, 9 and 18 — without any bangle being left.

- * How many groups will she have if she makes groups of 1 bangle each? ____

Now complete the table, for different numbers of bangles. For each number see what different groups can be made.

Number of bangles	Different groups we can make
18	1, 2, 3, 6, 9, 18
24	1, 2,
5	
9	
7	
2	
10	
1	
20	
13	
21	

Fill the Chart

Complete the multiplication chart given here.

×	1	2	3	4	5	6	7	8	9	10	11	12
1												12
2						12						
3				12			21					
4			12							40		
5				20								
6		12										
7												
8									72			
9												
10												
11						66						
12	12											

Look at the green boxes in the chart. These show how we can get 12 by multiplying different numbers.

$12 = 4 \times 3$, so 12 is a multiple of both 4 and 3. 12 is also a multiple of 6 and 2, as well as 12 and 1. We say 1, 2, 3, 4, 6, 12 are **factors** of 12.

12
 4×3
 6×2
 1×12

* What are the factors of 10? _____

Can you do this from the chart?

10
5×2

* What are the factors of 36? _____

* Find out all the factors of 36 from the multiplication chart.

* What is the biggest number for which you can find the factors from this chart?

* What can you do for numbers bigger than that?

Common factors

Write the factors of 25 in the red circle and the factors of 35 in the blue circle.

Which are the factors you have written in the common part (purple) of both circles? These are **common factors** of 25 and 35.

Now write the factors of 40 in the red circle and 60 in the blue circle.

What are the factors written in the common (purple) part of the circle? Which is the biggest common factor of 40 and 60?

Factor Tree

Look at the factor tree. Now can you make another tree like this?

- * In how many ways can you draw a factor tree for 24? Draw three of them below.

- * Try drawing the factor tree using other numbers also.

Tiling Problems

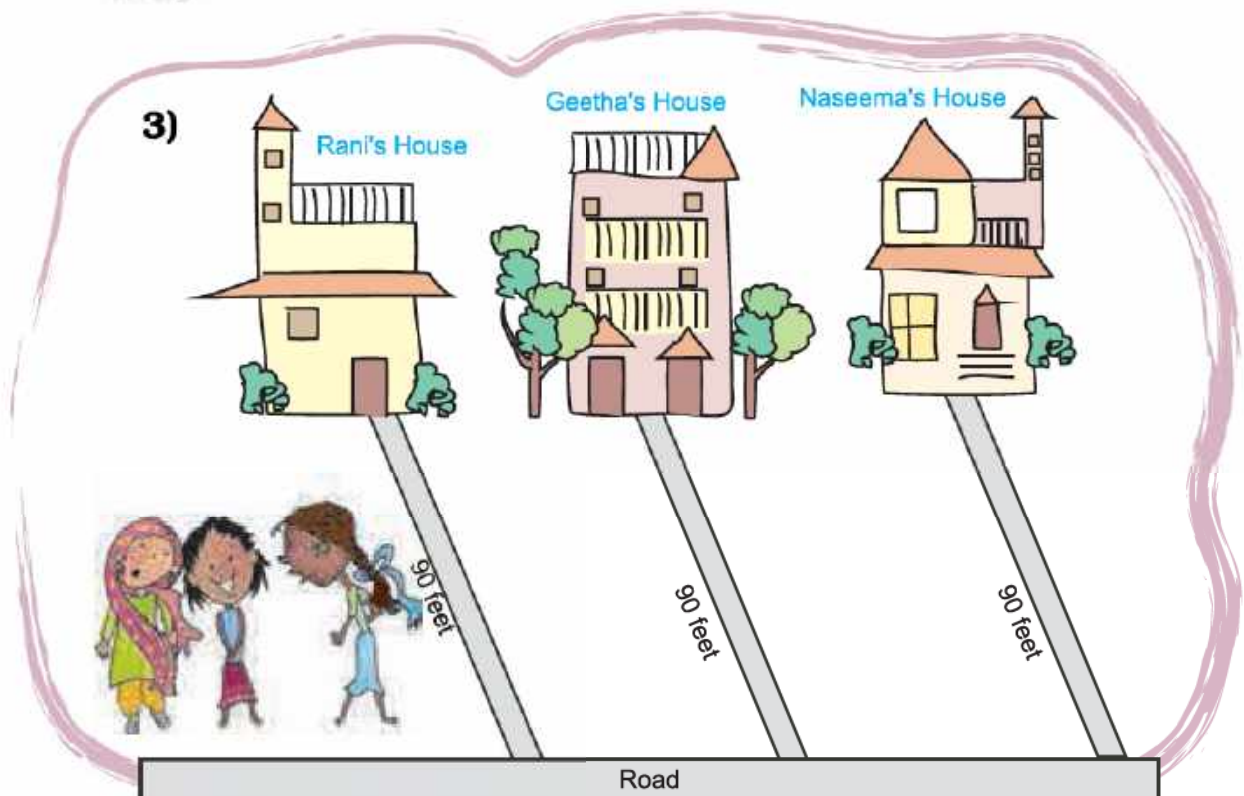

1) There is a garden in Anu's house. In the middle of the garden there is a path. They decided to tile the path using tiles of length 2 feet, 3 feet and 5 feet.

The mason tiled the first row with 2 feet tiles, the second row with 3 feet tiles and the third row with 5 feet tiles. The mason has not cut any of the tiles. Then what is the shortest length of the path?

2) Manoj has made a new house. He wants to lay tiles on the floor. The size of the room is 9 feet \times 12 feet. In the market, there are three kinds of square tiles: 1 foot \times 1 foot, 2 feet \times 2 feet and 3 feet \times 3 feet. Which size of tile should he buy for his room, so that he can lay it without cutting?

3) Rani, Geetha and Naseema live near each other. The distance from their houses to the road is 90 feet. They decided to tile the path to the road. They all bought tiles of different designs and length. Rani bought the shortest tile, Geetha bought the middle sized one and Naseema bought the longest one. If they could tile the path without cutting any of the tiles, what is the size of the tiles each has bought? Suggest 3 different solutions. Explain how you get this answer.

It will be useful to have a discussion about a 'foot' and how we use it often to talk about our own heights. Children can use their cm scale to get idea about how long a foot is.

7

Can You See the Pattern?

Now you use these two rules to make patterns with this  block.

Also make your own rule.

In Math-Magic Class IV (page 107- 108) , children have seen how one motif is used in 3 different ways and in Class III (page 145), the same sequence of motifs is repeated. Discuss how the motif here turns clockwise.

Turns and Patterns

Look at this block . We make three different rules to turn it clockwise and see the patterns.

Rule 1: Repeat it with a one-fourth turn.

Rule 2: Repeat it with a half turn.

Rule 3: Repeat it with a three-fourth turn.

Practice time

1) What should come next?

a)

b)

Encourage children to think of other alternatives. Answers obtained by anticlockwise turns should also be accepted and discussed.

c)

d)

2) See this pattern

a)

The **rule** of the pattern is — turning by 45° each time. Which will be the next?
Tick (✓) the right one.

()

()

()

Using the same rule take it forward till you get back to what you started with.

3) Some patterns are given below on the left side of the red line. For each

b)

c)

pattern, write the rule. Then choose what comes next from the right side of the line and tick (✓) it.

a)

Rule: _____

() ()

b)

Rule: _____

() ()

c)

Rule: _____

() ()

d)

Rule: _____

() ()

Look for a Pattern

Mark that picture which is breaking the rule. Also correct it.

Magic Squares

Do you remember magic triangles? Come now, let's make some magic squares.

- ✱ Fill this square using all the numbers from 46 to 54.

Rule: The total of each line is 150.

- ✱ Fill this square using all the numbers from 21 to 29.

29.

Rule: The total of each side is 75.

Magic Hexagons

You can see Math-Magic Class IV (page 11) for similar magic patterns.

		49
46		
	52	47

Look at the patterns of numbers in hexagons.

Each side has 2 circles and 1 box.

Look at the number 65 in the box. Which are the circles next to it?

$$5 \times 13 = 65$$

Can you see how the rule works?

$$7 \times 10 = 70$$

✱ Use the same rule to fill the hexagons below.

Now you also make your own magic hexagons.

Numbers and Numbers

You can discuss that a hexagon is a six-sided closed figure, but this is not to be evaluated.

✱ Are they equal?

$$\begin{array}{c} \text{24} \\ \star \end{array} + \begin{array}{c} \text{19} \\ \text{pentagon} \end{array} + \begin{array}{c} \text{37} \\ \text{diamond} \end{array} = \begin{array}{c} \text{37} \\ \text{diamond} \end{array} + \begin{array}{c} \text{24} \\ \star \end{array} + \begin{array}{c} \text{19} \\ \text{pentagon} \end{array}$$

$$\begin{array}{c} \text{215} \\ \text{oval} \end{array} + \begin{array}{c} \text{120} \\ \text{diamond} \end{array} + \begin{array}{c} \text{600} \\ \text{rectangle} \end{array} = \begin{array}{c} \text{600} \\ \text{rectangle} \end{array} + \begin{array}{c} \text{215} \\ \text{oval} \end{array} + \begin{array}{c} \text{120} \\ \text{diamond} \end{array}$$

✱ Fill in the blank spaces in the same way.

✱ Now, look at this —

a) $\begin{array}{c} \text{14} \\ \star \end{array} + \quad + \quad = \begin{array}{c} \text{34} \\ \text{rectangle} \end{array} + \begin{array}{c} \text{14} \\ \star \end{array} + \begin{array}{c} \text{20} \\ \text{circle} \end{array}$

b) $\quad + \begin{array}{c} \text{42} \\ \text{flower} \end{array} + \quad = \begin{array}{c} \text{65} \\ \text{diamond} \end{array} + \quad + \begin{array}{c} \text{80} \\ \text{hexagon} \end{array}$

c) $\begin{array}{c} \text{200} \\ \text{cloud} \end{array} + \begin{array}{c} \text{300} \\ \text{star} \end{array} + \quad = \quad + \begin{array}{c} \text{400} \\ \text{cloud} \end{array} + \quad$

d) $\quad + \quad + \quad = \quad + \quad + \quad$

Check if it is true or not. $\begin{array}{c} \text{48} \\ \text{semicircle} \end{array} \times \begin{array}{c} \text{13} \\ \text{semicircle} \end{array} = \begin{array}{c} \text{13} \\ \text{semicircle} \end{array} \times \begin{array}{c} \text{48} \\ \text{semicircle} \end{array}$

Left Right — Same to Same

So we see that to get special numbers we sometimes need more steps.

Discuss with students that changing the order of numbers does not make any difference to the sum.

Come, let's see how to get such numbers.

Take a number, say 43
Now turn it back to front 34
Then add them together 77

77 is one such special number. There are many such numbers.

You have reversed the number by writing it back to front.

Take another number 48
Now turn it back to front 84
Then add them together 132
Is this a special number? No! Why not?
OK, carry on with the number 132
Again turn it back to front 231
Then add the two together 363
Ah! 363 is a special number.

✱ Now you try and change these numbers into special numbers —

Now let's use words in a special way.

a) 28

b) 132

c) 273

Did you notice that it reads the same from both sides — right to left and left to

N O L E M O N S N O M E L O N
S T E P N O T O N P E T S

right?

Now try and use words in a special way.

Special words/numbers which read the same both ways are called palindromes. Help children to read them from both the ends.

Calendar Magic

Look at the calendar below.

Let us mark a 3×3 box (9 dates) on the calendar and see some magic.

s	m	t	w	th	f	s
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31				

I can quickly find the total of these numbers in the box.

Won't that take some time?

The total is 99.

Take the smallest number

3

Add 8 to it

+8

=

11

Multiply it by 9

$\times 9$

Total

99

Hey! Just take the middle number and multiply it by 9. See you can get the answer even faster.

Now you choose any 3×3 box from a calendar and find the total in the same way. Play this game with your family.

You can see Math-Magic Class III (page 105 -106) for other calendar tricks.

Some more Number Patterns

- ✱ Take any number. Now multiply it by 2, 3, 4 at every step. Also add 3 to it at each step. Look at the difference in the answer. Is it the same at every step?

12	×	2	+	3	=	27
12	×	3	+	3	=	39
12	×	4	+	3	=	51
12	×	5	+	3	=	63
12	×		+	3	=	
	×	7	+	3	=	
	×		+	3	=	
	×		+		=	

Now try doing it with some other number and also take a different number to add at each step.

- ✱ Look at the numbers below. Look for the pattern. Can you take it forward?

$(9 - 1) \div 8 = 1$
$(98 - 2) \div 8 = 12$
$(987 - 3) \div 8 = 123$
$(9876 - 4) \div 8 = \underline{\hspace{2cm}}$
$(98765 - 5) \div 8 = \underline{\hspace{2cm}}$
$(\underline{\hspace{2cm}} - \underline{\hspace{2cm}}) \div 8 = \underline{\hspace{2cm}}$
$(\underline{\hspace{2cm}} - \underline{\hspace{2cm}}) \div 8 = \underline{\hspace{2cm}}$

Encourage children to read aloud the numbers on the left hand side, even if they can not read them correctly. Some of the numbers are large. To help children read them, recall the concept of 1 lakh or 100 thousand.

Smart Adding

Oh! I can find it quickly.

Smart! How can you do that?

I can get the sum without adding.

What if someone gives you to add ten numbers together?

$$1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 + 10 = 55$$

$$11 + 12 + \quad + \quad + \quad + \quad + \quad + \quad + \quad + 20 = 155$$

$$21 + \quad + \quad + \quad + \quad + \quad + \quad + \quad + \quad + 30 = \quad$$

$$31 + \quad + \quad + \quad + \quad + \quad + \quad + \quad + \quad + 40 = \quad$$

$$41 + \quad + \quad + \quad + \quad + \quad + \quad + \quad + \quad + 50 = \quad$$

$$51 + \quad + \quad + \quad + \quad + \quad + \quad + \quad + \quad + 60 = 555$$

$$61 + \quad + \quad + \quad + \quad + \quad + \quad + \quad + \quad + 70 = \quad$$

* Did you notice some pattern in the answers?

Fun with Odd Numbers

Take the first two odd numbers. Now add them, see what you get.

Now, at every step, add the next odd number.

$$1 + 3 = 4 = 2 \times 2$$

$$1 + 3 + 5 = 9 = 3 \times 3$$

$$1 + 3 + 5 + 7 = 16 = 4 \times 4$$

$$1 + 3 + 5 + 7 + 9 = \quad = \quad \times \quad$$

$$1 + 3 + 5 + 7 + 9 + 11 = \quad = \quad \times \quad$$

$$1 + 3 + 5 + 7 + 9 + 11 + 13 = \quad = \quad \times \quad$$

How far can you go on?

When we add the first n odd numbers, we will get the sum as $n \times n$. Children should be left free to add the numbers.

Secret Numbers

Banno and Binod were playing a guessing game by writing clues about a secret number. Each tried to guess the other's secret number from the clues.

Can you guess their secret numbers?

- 
- ✿ It is larger than half of 100
 - ✿ It is more than 6 tens and less than 7 tens
 - ✿ The tens digit is one more than the ones digit
 - ✿ Together the digits have a sum of 11

What is my secret number?
✿ _____

What is my secret number?

- ✿ It is smaller than half of 100
- ✿ It is more than 4 tens and less than 5 tens
- ✿ The tens digit is two more than the ones digit
- ✿ Together the digits have a sum of 6

- ✱ Write a set of clues for a secret number of your own. Then give it to a friend to guess your secret number.

Number Surprises

- a) Ask your friend — Write down your age. Add 5 to it. Multiply the sum by 2. Subtract 10 from it. Next divide it by 2. What do you get?

Is your friend surprised?

b)

Take a number

Double it

×

=

Multiply by 5

×

=

Divide your answer by 10

÷

=

c)

Take a number

Double it

×

=

Again double it

×

=

Add the number you took first to the answer

+

=

Now again double it

×

=

Divide by 10

÷

=

d) Look at this pattern of numbers and take it forward.

$$1 = 1 \times 1$$

$$121 = 11 \times 11$$

$$12321 = 111 \times 111$$

$$1234321 = ?$$

* Now make your own number surprises.

8

Mapping Your Way

Ashi is going to India Gate to see the Republic Day Parade with the other children of her school. As the children settle down, they hear something about India Gate on the loudspeaker. "To the right of the President is the India Gate. This was built in memory of the Indian soldiers who died in the First World War."

There are lots of people sitting on both sides of Rajpath, the main road along which the parade passes. Children are talking about the buildings they can see around them.

Here is a photograph taken from a helicopter. You can see Rajpath — the road which joins India Gate to Rashtrapati Bhawan. Mark where on Rajpath will Aditi be.

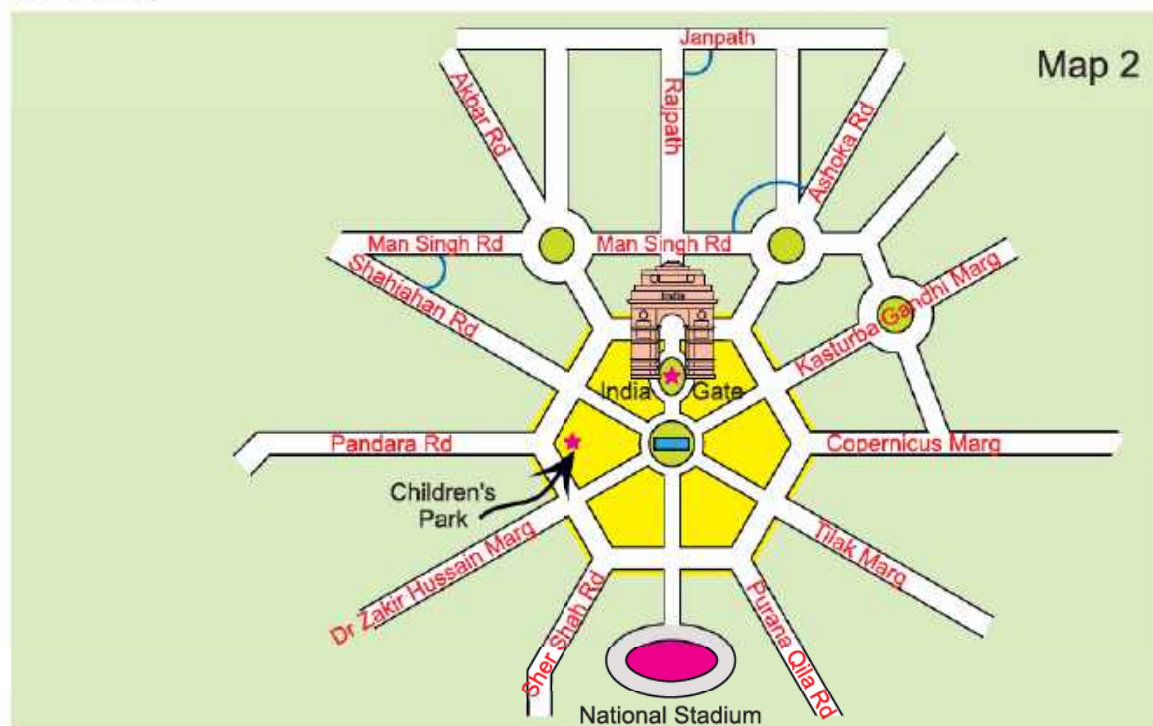

Match the map and the photo

- 1) Have you seen a map of a city? Look at Map 1. Match it with the photo and find out where India Gate is. Draw it on the map.
- 2) Some roads are shown in this part of the map. Look for them in the photo.
- 3) Name roads that you will cross on your way from Rashtrapati Bhawan to India Gate.
- 4) Look for the National Stadium in Map 1. Can you see it in the photo?

The Central Hexagon

If we 'zoom in' to look more closely at one part of the map, it looks like this.

Look at the shape of the yellow area. Have you seen this shape before? How many sides does it have?

This place is called the Central Hexagon.

Find out from the map

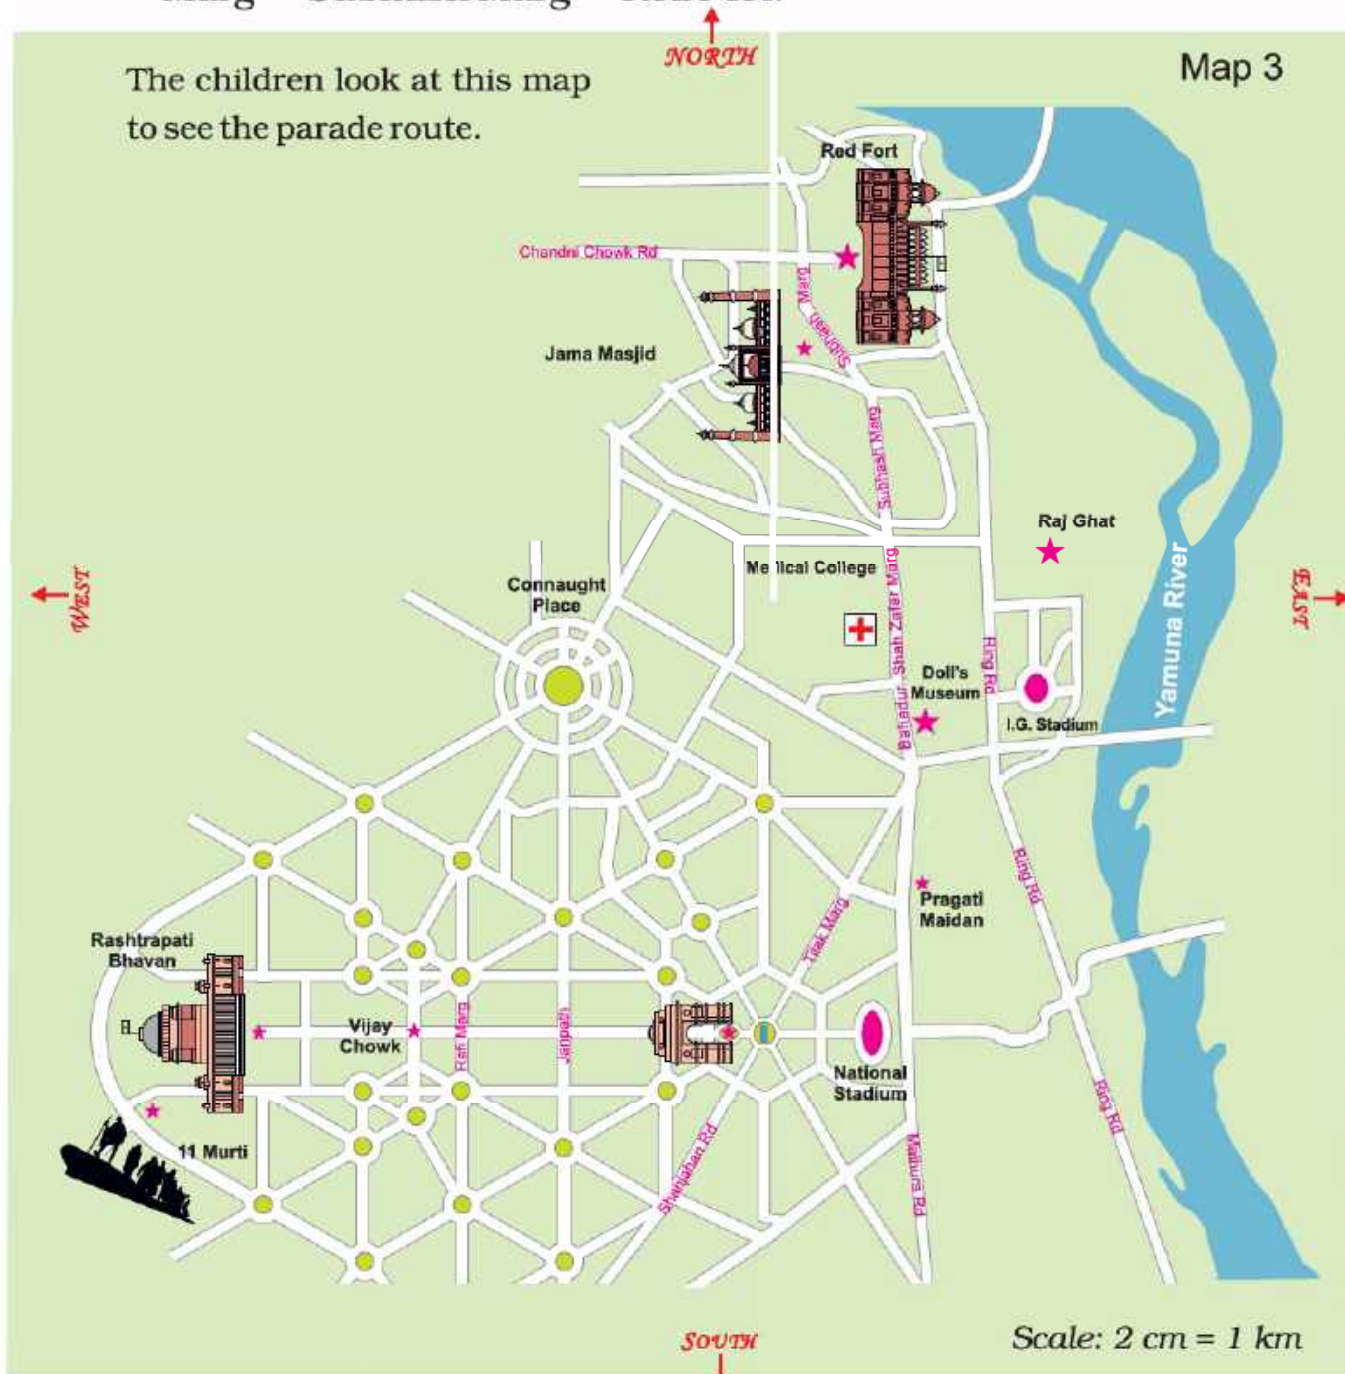

- 1) If you are walking on Rajpath then after India Gate on which side would Children's Park be?
- 2) Which of these roads make the biggest angle between them?
 - a) Man Singh Road and Shahjahan Road
 - b) Ashoka Road and Man Singh Road (the angle away from India Gate)
 - c) Janpath and Rajpath
- 3) Which of the above pairs of roads cut at right angles?

Waiting for the Parade

While waiting for the parade, Kancha and some of his friends wonder where this parade ends. Kancha is carrying a newspaper in which the route of the parade is written —

Vijay Chowk — Rajpath — India Gate — Tilak Marg — B.S. Zafar Marg — Subhash Marg — Red Fort.

The children look at this map to see the parade route.

Mark the route

- 1) Trace the route of the parade in Map 3 and mark India Gate and Rajpath.
- 2) Look at the map carefully and find out.
 - a) Which of these is the longest road?
 - B.S. Zafar Marg ● Subhash Marg ● Tilak Marg
 - b) If Rubia is coming from Jama Masjid to join the parade, guess about how far she will have to walk.
 - c) The total route of the parade is about how long?
 - 3 km ● 16 km ● 25 km ● 8 km

As the parade passes by, they see some children coming on an elephant. These children have got bravery awards. They also enjoy the colourful dances and aerobics by school children.

They want to follow the parade to Red Fort. Gappu has seen Red Fort before and tells them about his trip.

Children should understand the need for a scale. We need to discuss that when we show a big area on paper, we have to reduce it by a fixed ratio everywhere, so that the relative distances and positions remain the same.

Trip to Red Fort

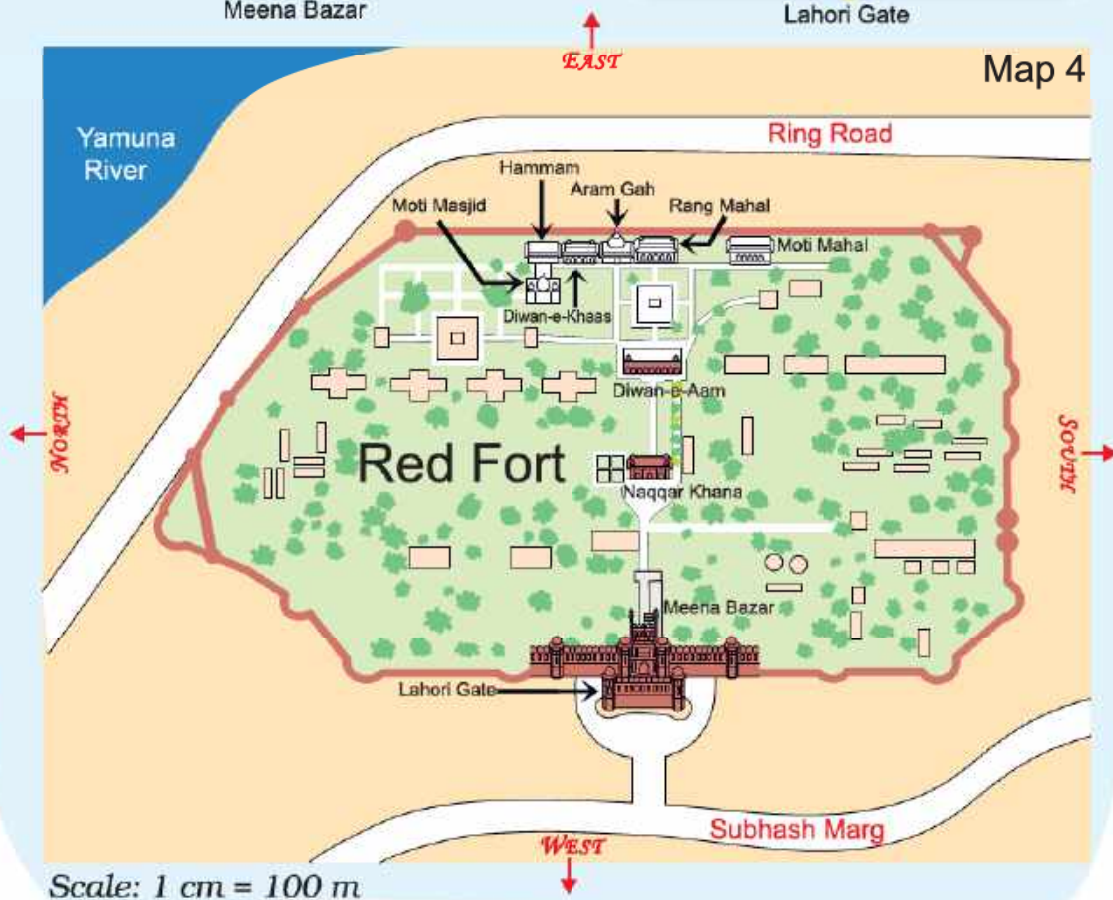

"When we reached Red Fort, there was a long queue for tickets. The main entrance is called **Lahori Gate**. After entering it, we turned left into a long corridor with little shops on both sides. This is called **Meena Bazar**. I bought some lovely bangles from there for my sister".

Meena Bazar

Lahori Gate

Naggar Khana —
where drums were
beaten to shout out the
king's messages

"You can go straight through **Naggar Khana** and reach **Diwan-e-Aam**. This is where the king used to meet the common people.

Walking straight from **Diwan-e-Aam**, we saw **Rang Mahal**. It is a beautiful building! There were three more buildings on our left side. Look for these on the map.

From the right — Rang Mahal,
Aaram Gah and Diwan-e-Khas

We walked left from Rang Mahal. **Diwan-e-Khaas** was where the king used to meet his ministers and other important (khaas) people."

Inside Rang Mahal

Inside Diwan-e-Khaas

Find out from Map 4

- Which of these is nearer to river Yamuna? — the Diwan-e-Aam or the Diwan-e-Khaas?
- Between which two buildings is Aaram Gah?
- Which buildings do you pass while going from Rang Mahal to the Hammam?
- Which building on this map is farthest from Meena Bazar?
- About how far is Lahori Gate from Diwan-e-Khaas?

Make It Bigger, Make It Smaller.

Here are some pictures drawn on a 1 cm square grid. Try making the same pictures on a 2 cm grid and also on a $\frac{1}{2}$ cm grid. One picture is already done.

1 cm grid

2 cm grid

The side of the square was made two times bigger. Does its area also become two times bigger?

Enlarging or reducing of pictures and maps can be done on the classroom floor, the mud ground etc. This should be related to the use of scale in maps, which keeps the shape the same.

Now try this —

This is a part of the parade-route Map 3.

- 1) Can you see which part of the route-map it is?
- 2) Now try to make it bigger in this 2 cm grid. Remember that the 'shape' of the map should not change.
- 3) If the parade route map is smaller, and the distance between India Gate and Vijay Chowk becomes 2 cm, what would be its scale?
 - 1 cm on map = 1 km on ground
 - $\frac{1}{2}$ cm on map = 1 km on ground
 - 2 cm on map = 1 km on ground

1 cm grid

2 cm grid

Dancers from Different States

The children saw many floats (*jhankis*) and dancers in the parade.

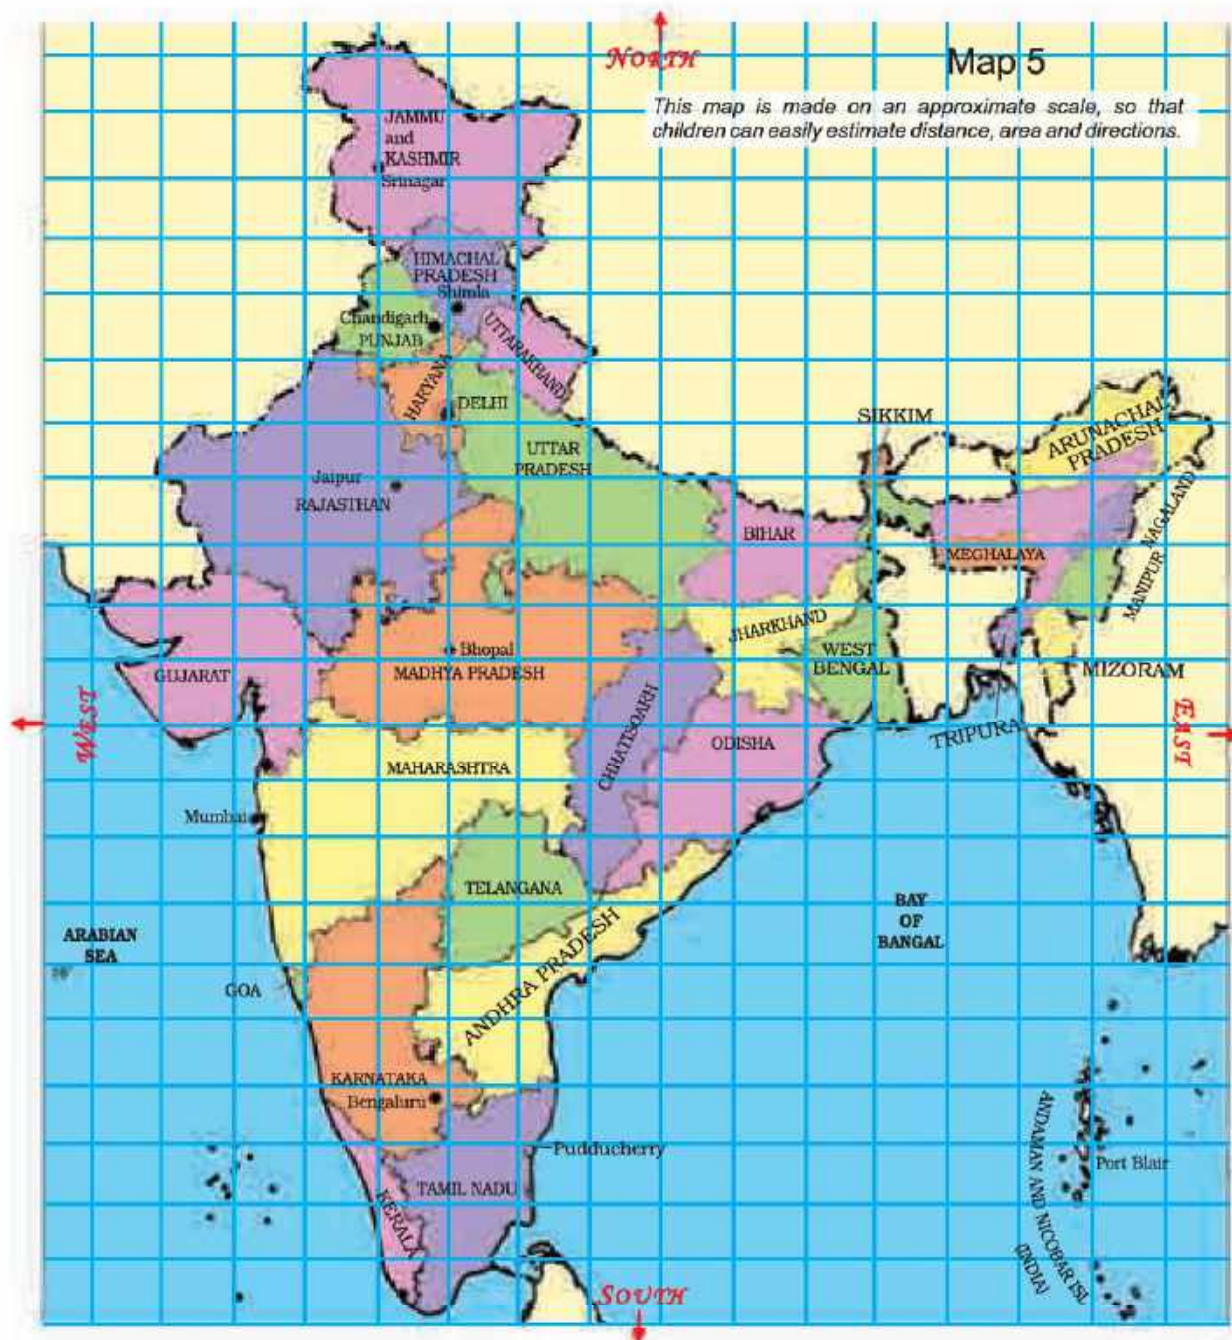

Dancers from Karnataka were the best.

I liked the Tripura dance. From Tripura and Sikkim they have to travel far, but Haryana and Uttarakhand are closer to Delhi.

All these people have to travel so much to come to Delhi!

Look at the map of India below and find the states these children are talking about. Answer the questions:

- 1) The Karnataka team starts from Bangalore and moves in the **north** direction. Which states does it cross to reach Delhi?

As the children are being introduced to directions for the first time, many activities need to be done to use terms like 'towards north', 'southwards', 'in the east direction', 'to the west of Madhya Pradesh' etc. One can draw maps on the floor and get children themselves to stand on the map and say things like Venkat is to the south of Shanti', 'Maharashtra is to the east of Gujarat' etc.

2) Jammu and Kashmir is to the **north** of Delhi so the team from there travels towards **south** to reach Delhi. Which states does it cross?

3) Nonu lives in Gujarat. Nonu's friend Javed lives in West Bengal. Nonu wants to visit his friend. In which direction will he travel?

- a) Towards west
- b) Towards east
- c) Towards south
- d) Towards north

4) Is there any state which is to the north of Jammu and Kashmir?

5) Is there any state which is to the west of Gujarat?

6) If **1 cm on the map shows 200 km on the ground**, use this scale to find out:

A) About how far is Delhi from Jaipur?

- a) 50 km b) 500 km c) 250 km

B) Estimate, how far is Jaipur from Bhopal?

On the map = _____ cm.

On the ground = _____ km.

7) Look at the map and tell:

- a) Which state is surrounded by four other states?
- b) Which state has the largest area? If its name is not in the map, find it from your teacher or parents.

Explain how you got your answer.

c) Which state is about 8 times bigger in area than Sikkim?

- Uttar Pradesh
- Tripura
- Maharashtra
- Himachal Pradesh

d) About how many times of Punjab is the area of Rajasthan?

The Sea

Bala is standing on the sea-coast and looking at the vast sea. The sea looks endless .

Have you seen the sea? In the picture where is the sea? Now look for the sea in the map of India. What colour is used to show the sea?

- * Mark those states which have the sea on one side.
- * Name one state which does not have the sea on any side.

Find out

Look for different maps. Compare the different scales used in a local area map, a map of India and a world map etc.

Lines between the States

Sabu is confused about the lines shown between the states.

Distances between Towns

These are five towns. Find out:

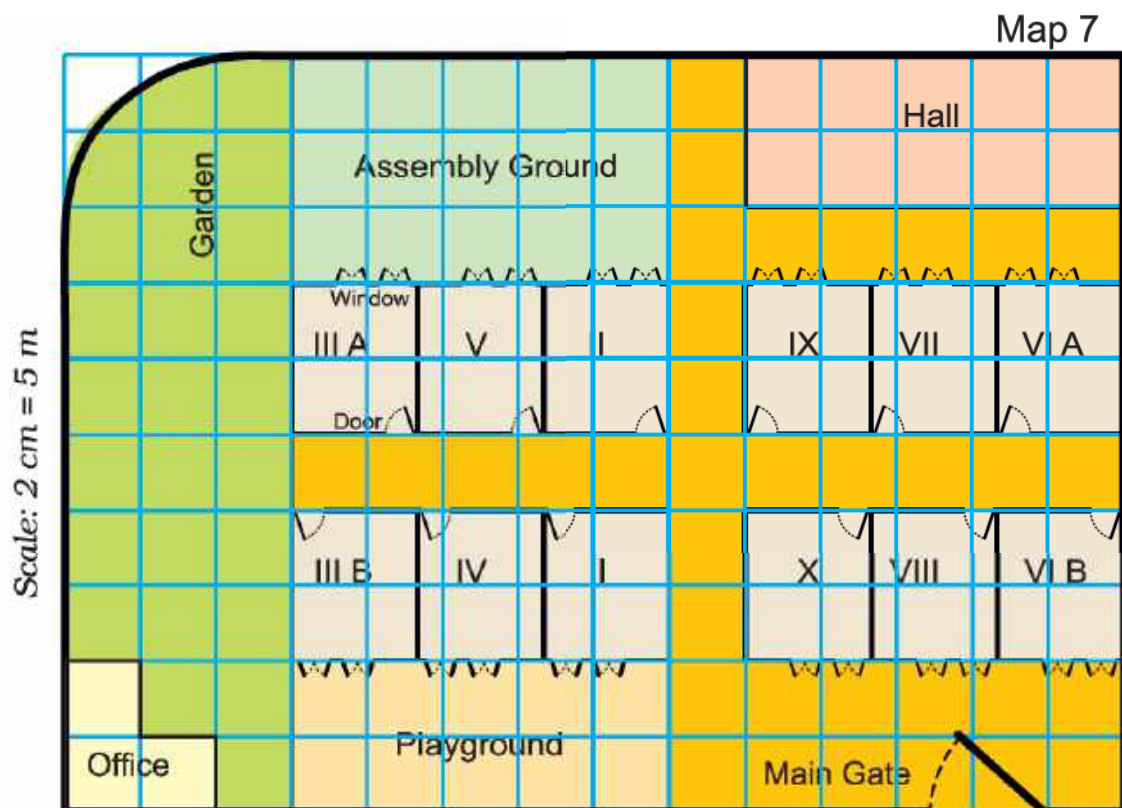

- 1) How many cm away is Idlipur from Barfinagar on the map?
- 2) How many kilometres will you have to travel if you go from Idlipur to Barfinagar?
- 3) There is a place called Khamanpur midway between Idlipur and Barfinagar. Mark it with a 'K'.
- 4) A town called Jalebipur is 35 kms away from both Chholaghat and Dhoklabad. Where do you think it can be? Mark 'J' for it.
- 5) Measure the length of the route between Bhelpur and Chholaghat. (You can use a thread)

Scale: 1 cm on the paper = 10 km

Ashi's School

Ashi's school looks like this from the top.

Use the squares to find out:

- 1) How many times bigger is the area of the Assembly ground than that of the office?
- 2) How much is the length and width of each classroom?
 - a) length 5 m, width 4 m
 - b) length 2 m, width 1 m
 - c) length 12 m, width 10 m
 - d) length 5 m, width 5 m

3) All the classrooms in Ashi's school look like this.

Look carefully and answer.

- a) Which of these is exactly opposite to the blackboard?
 - ✱ Almirah, windows, notice board, display board
- b) Now look at the school-map again. Guess and mark where would these be:
 - ✱ Blackboard in III A and VII
 - ✱ Almirah in IV and X
 - ✱ Notice board in V and VI B
 - ✱ Last seat of middle-row in II
 - ✱ Display board in I.

Boxes and Sketches

Sweet Box

Ramya went to buy sweets. The shopkeeper took a paper cut-out and quickly made a lovely pink box for the sweets!

- * Look at the photo and make your own box. Use the cut-out on page 201. How fast can you fold it?

After coming home Ramya unfolded the box. She removed the extra flaps so the cut-out looked like this.

This shape makes a box. Let me see what other shapes will make a box.

- * She made four more shapes. Each is to be folded along the dotted lines. You have to find out which of these can be made into a box.

This chapter focuses on visualisation of 3-dimensional shapes and how they can be represented on paper (in 2 dimensions). The representation used here are nets (like the ones above), layout plans for a house, and perspective drawings.

Shapes that Fold into a Cube

A. Buddha wants to make a paper cube using a squared sheet. He knows that all the faces of a cube are squares.

He draws two different shapes.

How many faces does the cube have? _____

- * Will both these shapes fold into a cube?
- * Draw at least one more shape which can fold into a cube.
- * What will be the area of each face of the cube?
- * Draw one shape which will not fold into a cube.
- * Look around and discuss which things around you look like a cube. List a few.

Shapes for an Open Box

Remember the puzzles with five squares in chapter 3? You saw 12 different shapes made with five squares (page 46).

If you cut those shapes and fold them, some of those will fold into an open box (box without a top).

I can make open boxes with both these.

But with these I cannot make open boxes.

- * Find out which of the other 8 shapes (on page 46) can be folded to make an open box.
- * Draw more shapes which will not fold to make an open box.

Boxes and Boxes

All boxes are not cubes. Here are some different kinds of boxes. Match the shape on the left with a box into which it will fold.

Making mental images of shapes is an important mathematical ability. Children will need many exercises to visualise the net of a box, to think of how it looks when flattened, and also to check which nets (like those on page 126) do not make a box.

Floor Maps

For making a house a floor map is first made. Have you ever seen a floor map? Here is a floor map of Vibha's house. It shows where the windows and the doors are in the house.

- * Which is the front side of her house? How many windows are there on the front side?

From the floor map we cannot make out what her house really looks like or how high the windows are. So we look for a special way of drawing the house which is deep — to show the length, width and height.

Here are four **deep drawings** of houses.

- * Which one is Vibha's house?

d)

a)

b)

c)

- * Why do the other three deep drawings not match the floor map? Discuss.

A 3-dimensional perspective drawing has been called a 'deep drawing' so that children get a sense of the need to represent depth. They should be able to see the difference between deep drawings and layout plans.

Practice time

1. Look at this floor map of a house. Make doors and windows on the deep drawing of this house.

- * Are there any windows you couldn't show on the deep drawing? Circle them on the floor map.
2. Try to make a floor map of your own house.

A Deep Drawing of a Cube

Soumitro and his friends made deep drawings of a cube.

These are their drawings.

- * Which of the drawings look correct to you? Discuss.
- * Can you add some lines to make drawing f) into a deep drawing of the cube?

Puzzle

This cut-out is folded to make a cube.

Which of these are the correct deep drawings of that cube?

a)

b)

c)

d)

e)

A Simple Way to Draw a Cube

Chanda wants to make a deep drawing of this cube.

She draws the cube like this.

I drew two squares like this to show the front face and the back face.

I joined the corners of the squares like this to make the deep drawing of the box.

✱ In the same way make a deep drawing of a box which looks like this.

The 2D representation of 3D objects is a matter of convention and is learnt by children through experience. Here the conventional way of drawing the cube is given.

Matchbox Play

Navin, Bhaskar and Pratigya made this bridge using matchboxes.

Navin and Pratigya made drawings of the bridge.

The bridge looks like this to me from where I am standing.

The bridge looks like this to me. My drawing shows how high our bridge is and how wide it is.

From your drawing I can make out how long and how high the bridge is. But I cannot make out how wide it is.

* If you look at the bridge from the top, how will it look? Choose the right drawing below:

- a) 
- b) 

* Look at the photo and try to make a deep drawing of this bridge.

Practice time

1) Make drawings to show how this bridge will look

- * From the top
- * From the front
- * From the side

2) Make a matchbox model which looks like this.

* Also make a deep drawing of the model in your notebook.

3) How many cubes are needed to make this interesting model?

* Here are some drawings of the model. Mark the correct top view drawing with 'T' and the correct side view drawing with 'S'.

Tenths and Hundredths

052/CH10

What was the length of the smallest pencil you have used?

How long is this pencil? Guess _____ cm 

Measure it using a scale. How good is your guess?

We can see that Anju used a lens to make it look bigger.

It is more than 3 centimetres.

Here one centimetre has 10 equal parts. So each part is one-tenth of a centimetre. One-tenth of a centimetre is called one millimetre (mm).

Oh, so this pencil is 3 centimetres and 6 millimetres long.

See I am 3 mm long!

But I am longer! Seven-tenth of a centimetre or millimetres

We also call one-tenth of a centimetre as 0.1 centimetre. We read it as 'zero point one centimetre'.

So one **millimetre** is the same as 0.1 cm.

- * What is the length of this pencil? _____ mm.
What is its length in centimetres?

Frogs

Have you seen frogs? Where? How many different types of frogs have you seen? Are all the frogs of the same length? Here are two interesting examples.

Gold Frogs

This kind of frog is among the smallest in the world. Its length is only 0.9 cm!

Guess how many such frogs can sit on your little finger!

Bull Frog

But this is among the biggest frogs. It is as long as 30.5 cm!

What does 0.9 cm mean? It is the same as _____ millimetres. We can also say this is nine-tenths of a cm. Right?

So 30.5 cm is the same as _____ cm and _____ millimetre.

About how many of the big frogs will fit on the 1m scale? _____

If they sit in a straight line about how many of the small frogs will cover 1m? _____

Practice time

- Length of the nail — 2 cm and _____ mm or 2. _____ cm.

2)

The length of this lady's finger (*bhindi*) is ____ cm and ____ mm.
We can also write it as ____ cm.

3) Using the scale on this page find the difference in length between candle 1 and candle 3.

Length of	Length in cm and mm	Length in cm
Candle 1		
Flame 1		
Candle 2		
Flame 2		
Candle 3		
Flame 3		

Guess and Colour

First colour the rods as shown, without measuring! Then check.

Rods of length less than 1 cm

Red

Rods of length between 1 cm and 2 cm

Blue

Rods of length between 2 cm and 3 cm

Green

Rods of length between 3 cm and 4 cm

Orange

Guess, Draw and Measure

Guess the lengths to draw these things. Ask your friend to draw the same. After you make the drawing use a scale to measure the length. Whose drawing showed a better guess?

<i>Guess its length and draw</i>	<i>Measure of your drawing</i>	<i>Measure of your friend's drawing</i>
An ant of length less than 1 cm		
Pencil of length about 7 cm		
A glass 11 cm high with water up to 5 cm		
A bangle of perimeter 20 cm		
A curly hair of length 16 cm		

Our Eyes Get Confused?

Which line is longer? A or B ? Measure each line and write how long it is in centimetres. How good is your guess?

Which line is longer? C or D ? Measure each line.
How good is your guess?

Whose Tail is the Longest?

Guess whose tail is the longest. Now measure the tails. How good is your guess?

The Longest Rupee Notes?

What is the length of a 100 rupee note? Guess. Now measure it using a scale.

Now guess the length and width of many other things. Measure and find the difference between your measure and your guess.

Size of	Your guess in cm		Your measure in cm	
	length	width	length	width
100 Rupee note				
10 Rupee note				
20 Rupee note				
5 Rupee note				
Post card				
Math-Magic book				

At the market

- 1) How many paise does a matchbox cost? _____
- 2) How many matchboxes can be got for ₹ 2.50? _____
- 3) How many rupees does the soap cost? _____
- 4) Arun wanted to buy a soap. He has a five-rupee coin, 2 one-rupee coins and 4 half-rupee coins. Write in rupees what money he will get back.

- 5a) A banana costs two and a half rupees. How much will one and a half dozen cost?

- b) How many pens can Kannan buy?
How much money is left?

Practice time — Match these

Match each yellow box with one green and one pink box.

Rupee $\frac{1}{2}$	5 paise	Rupee 0.75
Rupee $\frac{1}{10}$	25 paise	Rupee 0.50
Rupee $\frac{5}{100}$	99 paise	Rupee 0.05
Rupee $\frac{3}{4}$	50 paise	Rupee 0.10
Rupee $\frac{99}{100}$	75 paise	Rupee 0.25
Rupee $\frac{1}{4}$	10 paise	Rupee 0.99

Arrows indicate matches: Rupee $\frac{1}{2}$ to 50 paise to Rupee 0.50; Rupee $\frac{1}{10}$ to 10 paise to Rupee 0.10.

Colourful Design

What part of this sheet is coloured blue? ____/10

What part of the sheet is green? ____

Which colour covers 0.2 of the sheet?

Now look at the second sheet. Each strip is divided into 10 equal boxes. How many boxes are there in all?

Is each box $\frac{1}{100}$ part of the sheet?

How many blue boxes are there? ____

Is blue equal to $\frac{10}{100}$ of the sheet? We saw that blue is also equal to $\frac{1}{10}$ of the sheet. We wrote it as 0.1 of the sheet.

Can we say $10/100 = 1/10 = 0.10 = 0.1$?

Think: Can we write ten paise as 0.1 of a rupee?

How many boxes are red? What part of the sheet is this? 15/____

Can we also write it as 0.15 of the sheet?

(Hint: remember we wrote 99 paise as 0.99 rupee!)

Now 3/100 of the sheet is black. We can say 0.____ sheet is black.

How many white boxes are there in the sheet?

What part of the second sheet is white? ____

Don't get confused!
0.10 is the same as 0.1
Remember, this  is
Rupee 0.50 and also
Rupee 0.5

✱ Make your designs.

Make a nice design by colouring 0.45 part of this square red.

Use four colours. Each colour should cover 0.05 of this square.

Sports Day

The school at Malappuram has its sports day.

The first five children in the Long Jump are:

Teena	3.50 m
Meena	4.05 m
Rehana	4.50 m
Anu	3.05 m
Amina	3.35 m

Teena jumped 3.50m
which is 3 m and 50 cm.

But how far did Anu
jump? ____ m and ____ cm.

Who is the winner in the long jump? ____

Write the names of the I, II and III winners on this stand.

Do you remember that 1 metre = 100 centimetres?

So one centimetre is $\frac{1}{100}$ of a metre.

We also write 1 cm as _____ m

Write in Metres

3 metre 45 centimetre

metres

99 centimetre

metres

1 metre and 5 centimetre

metres

How Big Can You Get

A)

After breathing out 1.52 m

On taking a deep breath 1.82 m

Difference in size

Do this for yourself and find the difference.

B)

You have to grow 45 cm more to reach 2 m height

What is Dinesh's height in metres?

_____ m _____ cm.

Practice time

1) Money from different countries

Have you seen any notes or coins used in any other country?

Shivam Bank has a chart to show us how many Indian rupees we can get when we change the money of different countries.

Country	Money	Changed into Indian Rupees
Korea	Won	0.06
Sri Lanka	Rupee (SL)	0.43
Nepal	Rupee	0.62
Hong Kong	Dollar (HK)	8.40
South Africa	Rand	4.80
China	Yuan	9.83
U.A.E.	Dirham	17.79
U.S.A.	Dollar	65.29
Germany	Euro	76.83
England	Pound	86.63

(This is the rate on 04-10-2017)

A) The money of which country will cost the most in Indian Rupees?

B) Mithun's uncle in America had sent him 10 USA dollars as a gift. Mithun used 350 rupees for a school trip. How much money was left with him?

Children are not expected to carry out long multiplication involving decimals. Instead, encourage them to think in terms of currency. For example, 1 rupee \times 2 rupees can be thought of as four coins of 50 paise.

C) Majeed's father is working in U.A.E. He gets 1000 Dirham as salary. Arun's father who is working in Sri Lanka gets 2000 Sri Lankan Rupees. Who gets more Indian rupees as salary?

D) Leena's aunty brought a present for her from China. It cost 30 Yuan. Find what it costs in Indian rupees.

E) Astha wants some Hong Kong Dollars and Won.

1) How many Won can she change for ₹ 4? For ₹ 400?

2) How many Hong Kong Dollars can she change for ₹ 508?

2) Kiran went shopping with ₹ 200. Look at the bill. The shopkeeper forgot to put the point correctly in the prices. Put the point in the correct place and find out the total amount of the bill.

Item	Quantity	Price (Rupees)
Soap	1	1250
Green gram	1 kg	5025
Tea	250 gm	2725
Coconut Oil	1 Litre	6000
Total		_____

3) Which city is cool?

I live in Himachal. There the temperature in winter is 2° Celsius. Sometimes water in pipes freezes into ice.

But in Rajasthan where I live the temperature reaches 48° Celsius. Here it is very hot. One has to walk kilometres to get water.

Children can be encouraged to look at temperatures (in degree Celsius or $^{\circ}\text{C}$) of different cities in the newspaper and on TV. Without using the terms 'maximum' and 'minimum' this exercise will give them an idea that temperatures can be measured at two different times of the day. Only simple subtractions using decimals have been used here. They will also get familiar with the names of different capital cities and can do similar exercises for the capital cities of other countries.

The temperature in each city was noted at 3 pm on 16 January 2008.

- 1) Which place had the highest temperature at 3 pm? Which place is the coolest at that time?
- 2) How much higher is the temperature in Mumbai from that in Srinagar?

- 3) How many degrees will the temperature need to rise for it to reach 40° C in Thiruvananthapuram?
- 4) How much lower is the temperature of Kolkata from that in Chennai?
- 5) The temperature in these cities was also noted at 3 am on the same day. Look at the table and answer the questions.

City	Temperature at 3 am
Chennai	21.1
Mumbai	19.0
Th'puram	21.6
Kolkata	13.1
Bhopal	9.8
Srinagar	1.3
Guwahati	12.8
Jaipur	10.2

- a) Which place had the lowest temperature at 3 am? Imagine yourself to be there and describe how it would feel.
- b) What is the difference between the temperatures at 3 pm and 3 am in Chennai? In Bhopal?

Area and its Boundary

Whose Slice is Bigger?

Parth and Gini bought *aam paapad* (dried mango slice) from a shop.

Their pieces looked like these.

Both could not make out whose piece was bigger.

* Suggest some ways to find out whose piece is bigger. Discuss.

A friend of Parth and Gini showed one way, using small squares.

The length of piece A is 6 cm.

So 6 squares of side 1 cm can be arranged along its length.

The width of piece A is 5 cm.

So 5 squares can be arranged along its width.

* Altogether how many squares can be arranged on it? _____

* So the area of piece A = _____ square cm

Piece A

It's silly to
count them all!
Just multiply!

* In the same way find the area of piece B.

* Who had the bigger piece? How much bigger?

Cover with Stamps

This stamp has an area of 4 square cm. Guess how many such stamps will cover this big rectangle.

25 भारत India

Encourage children to first discuss different strategies for comparing the area of things by using different tokens, stamps, etc. In Class IV they have compared irregular shapes by counting squares. In the case of rectangles they can measure the sides to see how many squares of 1 cm side will fit in the whole shape.

Check your guess

- Measure the yellow rectangle. It is _____ cm long.
- How many stamps can be placed along its length? _____
- How wide is the rectangle? _____ cm
- How many stamps can be placed along its width? _____
- How many stamps are needed to cover the rectangle? _____
- How close was your earlier guess? Discuss.
- What is the area of the rectangle? _____ square cm
- What is the perimeter of the rectangle? _____ cm

Practice time

- Arbaz plans to tile his kitchen floor with green square tiles. Each side of the tile is 10 cm. His kitchen is 220 cm in length and 180 cm wide. How many tiles will he need?

- The fencing of a square garden is 20 m in length. How long is one side of the garden?

- A thin wire 20 centimetres long is formed into a rectangle. If the width of this rectangle is 4 centimetres, what is its length?

This 'Guess and check' activity can be done in the class by making use of other things present. For example: how many postcards can be placed on the top of the mathematics book; how many charts will cover the classroom walls, etc? Children can be asked to check their guesses by tiling things wherever possible. Once they are able to make close guesses, this work can be further extended by asking them to guess the area in terms of square cm.

d) A square carrom board has a perimeter of 320 cm.
How much is its area?

e) How many tiles like the triangle given here will fit
in the white design?

This triangle
is half of the
cm square

Area of design = _____ square cm

* Make your own designs of area 4 and 6 square cm.

f) Sanya, Aarushi, Manav and Kabir made greeting
cards. Complete the table for their cards:

Whose card	Length	Width	Perimeter	Area
Sanya	10 cm	8 cm		
Manav	11 cm		44 cm	
Aarushi		8cm		80 square cm
Kabir			40 cm	100 square cm

My Belt is Longest!

Take a thick paper sheet of length 14 cm and width 9 cm. You
can also use an old postcard.

* What is its area? What is its perimeter?

* Now cut strips of equal sizes out of it.

Using tape join the strips, end to end, to make a belt.

- * How long is your belt? _____
- * What is its perimeter _____
- * Whose belt is the longest in the class? _____

Discuss

- * Why did some of your friends get longer belts than others?
- * Is the area of your belt the same as the area of the postcard? Why or why not?
- * What will you do to get a longer belt next time?

Look! I can pass through a postcard. I made a loop without cutting the strips.

Puzzle: Pass through a Postcard

Can you think of how to cut a postcard so that you can pass through it? (See photo.) If you have tried hard enough and still not got it... look for the answer somewhere ahead.

The aim of the belt activity is to understand that things with the same area can take different forms and also have very different perimeters. While measuring sides, lengths in mm can be rounded off for this activity.

People People Everywhere

A) You can play this game in a ground.

Make two squares of one square metre each.

Divide your class in two teams. Ready to play!

With four Math-Magic books in a line you can get the length of around one metre 9 cm.

Try these in your teams —

- * How many of you can sit in one square metre? _____
- * How many of you can stand in it? _____
- * Which team could make more children stand in their square? How many? _____
- * Which team could make more children sit in their square? How many? _____

B) Measure the length of the floor of your classroom in metres. Also measure the width.

- * What is the area of the floor of your classroom in square metres? _____
- * How many children are there in your class? _____
- * So how many children can sit in one square metre? _____
- * If you want to move around easily then how many children do you think should be there in one square metre? _____

Can you imagine how big a square of side 1 km is! It has an area of _____ square km. Guess how many people can live on that.

In West Bengal there are about 900 people living in a square km.

But in Arunachal Pradesh it feels very lonely! There are less than 15 people living in a square km!

Share the Land

Nasreena is a farmer who wants to divide her land equally among her three children — Chumki, Jhumri and Imran. She wants to divide the land so that each piece of land has one tree. Her land looks like this.

* Can you divide the land equally? Show how you will divide it. Remember each person has to get a tree. Colour each person's piece of land differently.

Children are not expected to do conversion of sq m into sq km or vice-versa. The aim of exercise B is to develop a sense of how big or small the units of sq m and sq km are.

- * If each square on this page is equal to 1 square metre of land, how much land will each of her children get? _____ square m

Chumki, Jhumri and Imran need wire to make a fence.

- * Who will need the longest wire for fencing? _____

- * How much wire in all will the three need? _____

Practice time

A. Look at the table. If you were to write the area of each of these which column would you choose? Make a (✓).

	Square cm	Square metre	Square km
 Handkerchief	✓		
 Sari			
 Page of your book			
 School land			
 Total land of a city			
 Door of your classroom			
 Chair seat			
 Blackboard			
 Indian flag			
 Land over which a river flows			

B. Draw a square of 9 square cm. Write A on it.

Draw another square with double the side.
Write B on it.

Answer these —

1. The perimeter of square A is _____ cm.
2. The side of square B is _____ cm.
3. The area of square B is _____ square cm.
4. The area of square B is _____ times the area of square A.
5. The perimeter of square B is _____ cm.
6. The perimeter of square B is _____ times the perimeter of square A.

Answer — Pass Through a Postcard (page 150)

1.

Make lines on a postcard like this.

2.

Cut the postcard only on the lines.

3.

So, can you pass through it!

* You know the area of the loop, don't you? It is _____.

Thread Play

Take a 15 cm long thread. Make different shapes by joining its ends on this sheet.

A) Which shape has the biggest area? How much? _____

What is the perimeter of this shape? _____

B) Which shape has the smallest area? How much? _____

What is the perimeter of this shape? _____

Also make a triangle, a square, a rectangle and a circle. Find which shape has biggest area and which has the smallest.

Save the Birds

There are two beautiful lakes near a village. People come for boating and picnics in both the lakes. The village Panchayat is worried that with the noise of the boats the birds will stop coming. The Panchayat wants motor boats in only one lake. The other lake will be saved for the birds to make their nests.

- How many cm is the length of the boundary of lake A in the drawing? _____ (use thread to find out)
- What is the length of the boundary of lake B in the drawing?
- How many kilometres long is the actual boundary of lake A?
- How many kilometres long is the actual boundary of lake B?
- A longer boundary around the lake will help more birds to lay their eggs. So which lake should be kept for birds? Which lake should be used for boats?

- f) Find the area of lake B on the drawing in square cm. What is its actual area in square km?

King's Story

The King was very happy with carpenters Cheggu and Anar. They had made a very big and beautiful bed for him. So as gifts the king wanted to give some land to Cheggu, and some gold to Anar.

Cheggu, take as much land as what comes within 100 meters of wire.

Cheggu was happy. He took 100 metres of wire and tried to make different rectangles.

He made a 10 m \times 40 m rectangle. Its area was 400 square metres.

So he next made a 30 m \times 20 m rectangle.

* What is its area? Is it more than the first rectangle?

- * What other rectangles can he make with 100 metres of wire? Discuss which of these rectangles will have the biggest area.

Cheggu's wife asked him to make a circle with the wire. She knew it had an area of 800 square metres.

- * Why did Cheggu not choose a rectangle? Explain.

Ah! I want this piece of land. It covers an area of 800 square metres.

Ok. Cheggu has taken 800 square metres of land. Anar! Now I will give you as much gold wire which can make a boundary for land with area 800 square metres.

So Anar also tried many different ways to make a boundary for 800 square metres of land.

* He made rectangles A, B and C of different sizes. Find out the length of the boundary of each. How much gold wire will he get for these rectangles?

A

Gold wire for A = _____ metres

B

Gold wire for B = _____ metres

C

Gold wire for C = _____ metres

But then Anar made an even longer rectangle.... See how long!

D

So he will get _____ metres of gold wire!!

Gosh! How can I give so much gold?

Now do you understand why the king fainted!!!

Can you make a rectangle with a still longer boundary? I made a rectangle 1 cm wide and 80000 m long. Imagine how long that boundary will be!!! With that much gold wire I can become the king!

Smart Charts

Chi-Chi, Meow-Meow

Yamini did a project 'Animals and Birds'. She asked each child of her class about one favourite pet animal.

She used **tally marks** to record each answer. For example if someone said 'cat' she put one line in front of 'cats'. When someone said 'cat' again, she added a line. So  means two cats and  means 5 cats. In all 24 children said 'cat' was their favourite animal. Help Yamini complete the table.

Animal	Tally Marks	Number
 Cats		24
Dogs		
Rabbits		
Cows		
Parrots		
Goats		
Squirrel		

- Look at the tally marks and write the number for each animal in the table. How many children in all did Yamini talk to?
- Which is the most favourite pet animal in this table?
- Which pet will you like to have? What will you name it? Which other animals can be kept at home? Discuss.

Making Tally Marks on the Road

Sumita stood on the road for half an hour and counted the number of vehicles passing by. She made a tally mark for each vehicle. This helped her in counting quickly the total number of vehicles in each group.

	Tally Marks	Number
Cycle	<div> <div>▣</div> <div>▣</div> <div>▣</div> <div>▣</div> <div>▣</div> <div>▣</div> </div>	
Car	<div> <div>▣</div> <div>▣</div> <div>▣</div> </div>	
Auto rickshaw	<div> <div>▣</div> <div>▣</div> <div>▣</div> <div>▣</div> </div>	
Bus	<div> <div>▣</div> <div>▣</div> <div>▣</div> </div>	
Cycle rickshaw	<div> <div>▣</div> <div>▣</div> <div>▣</div> <div>▣</div> <div>▣</div> </div>	
Truck	<div> <div>▣</div> <div>▣</div> </div>	

- ❖ Write the number of each vehicle in the table.
- ❖ How many vehicles in all did Sumita see on the road in half an hour?
- ❖ Auto rickshaws are thrice the number of trucks — true/false?
- ❖ Make tally marks for 7 more buses, and 2 more trucks.

Try yourself

- ❖ Take a round in your colony. Find out how many types of trees you can see there. Do you know their names? You can make drawings. Use tally marks to note the number of different trees.

Children should be encouraged to use tally marks to simultaneously record data of a variety of things with larger numbers.

Helping Hands

In the EVS period, the teacher asked children whether they help their parents at home. There were different answers. Children named the work in which they help their parents the most. The teacher collected their answers and made a table.

Help most in house work	Number of children
Going to the market	47
Washing utensils	15
Washing clothes	3
Making, serving food	25
Cleaning the house	10
Total children who said they help their parents	

Now you can fill the chapati chart to show the numbers given in the table.

1) Look and find out

Children who help in making or serving food are

- a) One-third of the total children
- b) Half of the total children
- c) One-fourth of the total children

2) Practice time: After school

Ask 10 of your friends about what they like to do most after school.

What they like to do after school	Number of children
Watching TV	
Playing football	
Reading story books	

Ad Mad!!

Ragini loves to watch cartoons on television. One day she thought of counting the number of ads during the breaks. She found that in each break there were 14 advertisements. In 10 of those ads there were children as actors.

- ✦ Why do you think that children are used in so many ads?
- ✦ Use tally marks to count the number of ads during a short break in a programme.

Were there ads during the news programme?

Try yourself

- ✦ Next time when you watch your favourite TV programme, count the number of advertisements during each break. Use tally marks. Put a dot below the tally when you find children in any advertisement.
- ✦ Compare with your friends. Do you get different answers?

Hot and Cold

Have you seen the weather report on TV or in a newspaper? These are two bar charts. These show the highest temperature (in degrees Celsius) in four cities, on two different days. The cities are Delhi, Shimla, Bengaluru and Jaisalmer.

1 June

1 December

Find out from the bar chart —

- ❖ Which city is the hottest on 1 June?
- ❖ Which city is the coldest on 1 December?
- ❖ Which city shows little change in temperature on the two days — 1 June and 1 December.

Try yourself

On any one day, choose any three cities and record their temperature from the TV or newspaper.

- ❖ Make a bar chart in your notebook and ask your friends a few questions about it. See if they understand your chart!

Encourage children to look at the map of India to locate different cities. They can try to relate the temperature variations in a city to get an idea of the climate there.

Rabbits in Australia

Earlier there were no rabbits in Australia. Rabbits were brought to Australia around the year 1780. At that time there were no animals in Australia which ate rabbits. So the rabbits began to multiply at a very fast rate. Imagine what they did to the crops!

The table shows how rabbits grew every year.

A large white rabbit is on the left, looking towards the table. To its right is a small brown rabbit. On the right side of the table, there are two more rabbits, one white and one brown, facing each other. The background is a green field with a blue sky.

Time	Number of rabbits
Start	10
1 year	18
2 year	32
3 year	58
4 year	108
5 year	
6 year	

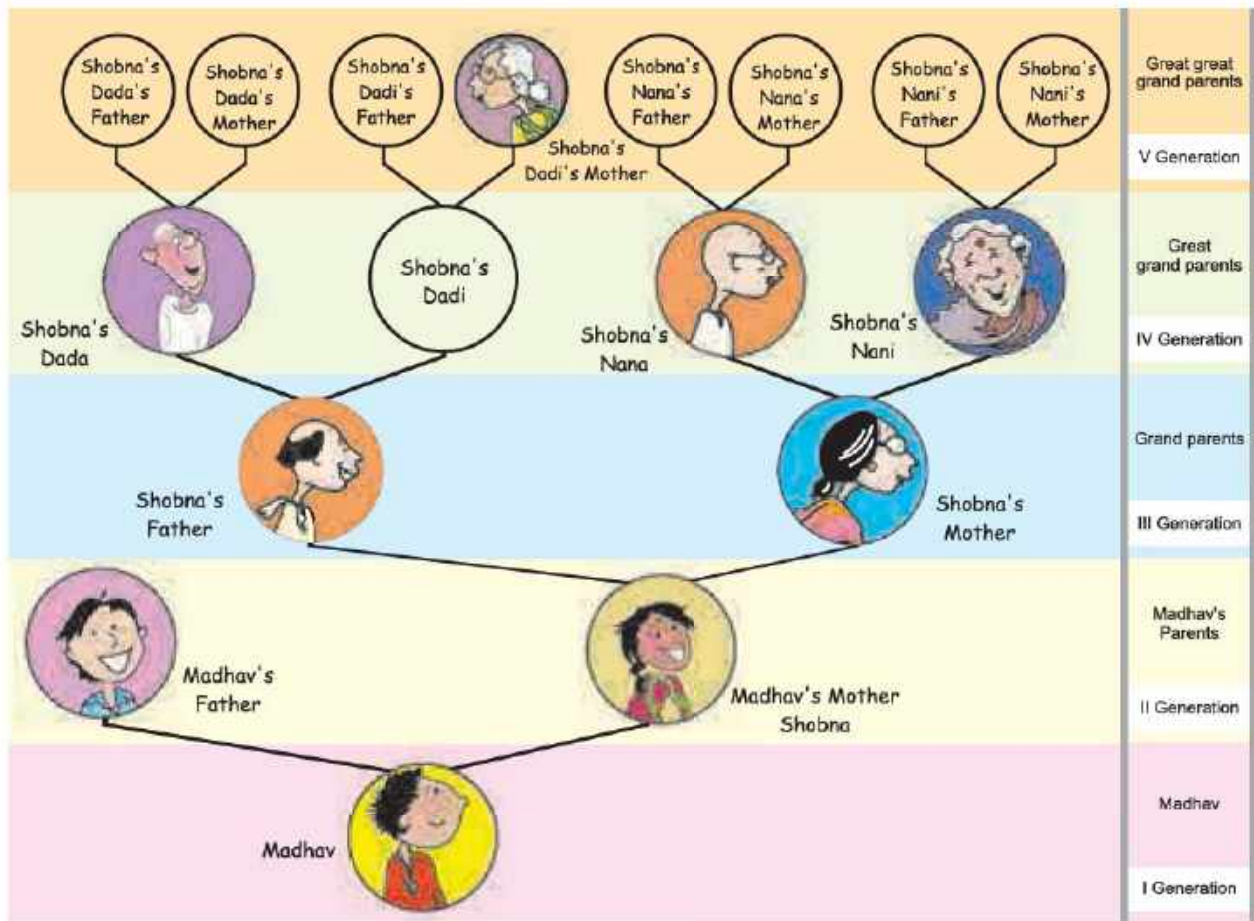

- 1) After each year the number of rabbits was —
 - a) a little less than double the number of rabbits in the last year.
 - b) double the number in the last year.
 - c) 8 more than the number in the last year.
 - d) more than double the number of rabbits in the last year.
- 2) At the end of year 6, the number of rabbits was close to
 400 600 800
- 3) After which year did the number of rabbits cross 1000?

More such examples should be done in class. It is important for children to get a sense of approximation.

Family Tree

Madhav went to a wedding along with his parents. He met many relatives there. But he didn't know everyone. He met his mother's grandfather, but found that her grandmother is not alive. He also found that her *Dadi's* mother (grandmother's mother) is still alive, and is more than a hundred years old.

Madhav got confused. He couldn't imagine his mother's grandmother's mother! So, Madhav's mother made a family

tree for him —

Madhav's mother helped him understand her family with the help of this drawing. You can also find out about your older generations using such a family tree.

Answer these questions:

- 1) How many grand parents in all does Shobna have?
- 2) How many great, great grand parents in all does Madhav have?
- 3) How many elders will be in the VII generation of his family?
- 4) If he takes his family tree forward in which generation will he

find 128 elders?

Growth Chart of a Plant

Amit sowed a few seeds of *moong dal* in the ground. The height of the plant grew to 1.4 cm in the first four days. After that it started growing faster.

Amit measured the height of the plant after every four days and put a dot on the chart. For example if you look at the dot marked on the fourth day, you can see on the left side scale that it is 1.4 cm high.

Now look at the height of each dot in cm and check from the table if he has

Day	Length of the plant (in cm)
0	0
4	1.4
8	5.3
12	9.5
16	10.2
20	10.9

Find out from the growth chart

a) Between which days did the length of the plant change the most?

- i) 0-4 ii) 4-8 iii) 8-12 iv) 12-16 v) 16-20

b) What could be the length of this plant on the 14th day? Guess.

- i) 8.7 cm ii) 9.9 cm iii) 10.2 cm iv) 10.5 cm

c) Will the plant keep growing all the time? What will be its length on the 100th day? Make a guess!

There should be some discussion on the last question. Children should be encouraged to observe growth patterns of many other plants and animals.

13

Ways to Multiply and Divide

052720113

Maniratnam - The Cashier

Maniratnam is the cashier of king Jayan. His job is to find out the salary of all the people who work for the king. This chart shows how much salary each person gets in a day.

Person	Salary in a day
Minister	₹ 195
Horse rider	₹ 76
Cook	₹ 65

Maniratnam wanted to calculate the salary of the cook for the month of January. He wrote —

	60	5
30	60×30 1800	5×30 150
1	60×1 60	5×1 5

Rupees $1800 + 150 + 60 + 5 = ₹$ _____

Maniratnam's daughter Bela has learnt another method to multiply. She wrote like this and showed it to Bhanu, her brother.

Akka, how did you do this?

$$\begin{array}{r}
 65 \\
 \times 31 \\
 \hline
 65 \quad (65 \times 1) \\
 + 1950 \quad (65 \times 30) \\
 \hline
 \hline
 \end{array}$$

We can multiply 65 with 31 in two steps. We know 31 is $30 + 1$. So, first multiply 65 with 1 and then with 30.

Now Bhanu tried to find the salary of a minister for the month of January. He wanted to multiply 195×31 .

$$\begin{array}{r} 195 \\ \times 31 \\ \hline 195 \quad (195 \times 1) \\ + \quad \underline{\quad 0} \quad (195 \times 30) \\ \hline \end{array}$$

To multiply by 30
I first write a zero
here. Then I only have
to multiply by 3.

Practice time

1) Use Bela's method to multiply these numbers.

a) 32×46

b) 67×18

$$\begin{array}{r} 32 \\ \times 46 \\ \hline 192 \quad (32 \times 6) \\ + \quad \underline{\quad \quad} \quad (32 \times 40) \\ \hline \end{array}$$

$$\begin{array}{r} 67 \\ \times 18 \\ \hline \quad \quad \quad (67 \times 8) \\ + \quad \underline{\quad \quad} \quad (67 \times \quad) \\ \hline \end{array}$$

2) Do these in your notebook using Bela's method.

a) 47×19

b) 188×91

c) 63×57

d) 225×22

e) 360×12

f) 163×42

Shantaram a Special Cook

- * Shantaram is a special cook who comes only on party days. Last year he was called for only 28 days. For each day he has to be paid ₹ 165. Find out how much money he will get in all.
- * If he is called for all days of the year, how much salary will he get?

$$\begin{array}{r} 165 \\ \times 365 \\ \hline \text{-----} \quad (165 \times 5) \\ \text{-----} \quad (165 \times 60) \\ + 49500 \quad (165 \times 300) \\ \hline \end{array}$$

- * Now find the salaries of the minister and horse rider for 1 year.

Years and Years

a) Sohan drinks 8 glasses of water every day.

- * How many glasses will he drink in one month? _____
- * How many glasses will he drink in one year?
- * If 125 people living in a colony drink 8 glasses of water in a day, how much water will they drink in a year?

b) If Soha's heart beats 72 times in one minute, how many times does it beat in one hour?

* Now find out how many times it beats in one day.

* Count your own heart beats to find out how many times your heart beats in one week.

Guess how many times it beats in one year.

c) A baby elephant drinks around 12 L of milk every day. How much milk will it drink in two years?

d) A baby blue whale drinks around 200 L of milk in one day. Just imagine how much milk that is! Find out in how many days your family would use 200 L milk. How much milk would the baby blue whale drink in eight months?

Karunya — The Contractor

Karunya had kept the work to prepare three gardens.

* Find the area of all the three gardens.

Garden (A) _____ square metre.

Garden (B) _____ square metre.

Garden (C) _____ square metre.

He kept the work of garden (A) at the rate of ₹ 95 for a square metre, garden (B) at ₹ 110 for a square metre and garden (C) at ₹ 120 for a square metre.

* How much amount will he get for this whole work ?

Hum, did he get more than a lakh of rupees!

Thulasi and her husband work on Karunya's garden. Karunya pays ₹ 225 to Thulasi and ₹ 258 to her husband per day.

If Thulasi works for 49 days, how much money does she get? _____

If her husband works for 42 days, how much money does he get? _____

Find the money they earn together _____

Who will earn more from Thulasi and her husband?

If Thulasi works for more 5 days and her husband work for less 4 days then how many rupees will they earn ?

I saw this in the newspaper.
Different contractors have declared
different rates for a day's work.

Name of Contractor	Wage for one day
Contractor-A	₹ 285
Contractor-B	₹ 267
Contractor-C	₹ 237
Contractor-D	₹ 279

The table shows the amounts fixed by four contractors.

- Which contractor has paid the highest daily wage? Which contractor has paid the lowest?
- Thulsi works for 8 weeks at the contractor B how much will she earn?
- Thulsi's husband works for $2\frac{1}{2}$ months at the contractor A, how much will he earn?
- How much more will a worker at contractor D get than a worker at contractor C after working for 9 weeks?

Farmers in Vidarbha (Maharashtra)

Vidarbha is facing a very serious problem. There was no rain and crops failed. At this time, villagers and co-operative organisations have helped the farmers. A newspaper reporter went around the area and spoke to the people. He wrote these two reports.

Satish's story

Satish is a 13 year old boy. His father had taken a loan for farming. But the crops failed. Now Satish's mother has to pay Rs 5000 every month for the loan.

Satish started working — he looked after 17 goats of the village.

He earns ₹ 10 everyday for one goat.

- * How much will he earn in one month?
- * Does he earn enough to help pay the loan every month?
- * How much will he earn in one year?

Kamla Bai's story

To help farmers the co-operative organisations gave cows. Kamla Bai Gudhe also got a cow. The cost of the cow was ₹ 17,500. She had to pay ₹ 5,500 and the co-operative organisations spent the rest of the money.

- * How much did the co-operative organisations spend on the cow?
- * If 9 people from her village got cows, how much did the Co-operative organisations spend in all?
- * Kamla Bai had to spend ₹ 185 everyday on the cow. She made some money by selling the milk.
- * If Kamla Bai spends ₹ 185 a day, find out how much she will spend in one month.
- * The cow gives 8 litre of milk everyday. How much will it give in one month?

* If the milk is sold at ₹ 39 per litre, how much money will Kamla Bai make in one month? _____

So the money spent on keeping the cow was ₹ _____

Money earned by selling the milk ₹ _____

Which is more — money spent on the cow or money earned from it? How much?

Find out — how much do you pay for 1 litre of milk?

Practice time

- a) Sukhi works on a farm. He is paid ₹ 198 for one day. If he works for 52 days, how much will he earn?

- b) Hariya took a loan to build his house. He has to pay back ₹ 2,750 every month for two years. How much will he pay back in 2 years?

- c) Ratiram is a milk seller in the city. He sells 13 litres of milk everyday at ₹ 43 per litre. How much does he earn?

- d) A farmer sells 1 litre of milk for ₹ 41. In one month he sells 210 litres of milk. How much does he earn in a month?

- e) A company sells 1 litre of packed water for ₹ 18. A shopkeeper buys 240 litres of packed water. How much does he pay?

Oh God! In the city people buy water by money !

Fun with multiplication

A) Look for the pattern and take this forward.

$$\begin{aligned}(0 \times 9) + 1 &= 1 \\ (1 \times 9) + 2 &= 11 \\ (12 \times 9) + 3 &= 111 \\ (123 \times 9) + 4 &= \underline{\hspace{2cm}} \\ (1234 \times 9) + 5 &= \underline{\hspace{2cm}} \\ (12345 \times 9) + 6 &= \underline{\hspace{2cm}}\end{aligned}$$

B) Each letter **a**, **b**, **c** here stands for a number.

$$\begin{array}{r} \text{aaa} \\ \times \text{aaa} \\ \hline \text{aaa} \\ \text{aaa0} \\ \text{aaa00} \\ \hline \text{abcba} \end{array}$$

Take $a = 1$, then find what the numbers b and c will be.

C) Tricks with your age.

Write your age _____

Multiply it by 7 _____

Again multiply the answer by 13 _____

Multiply again that answer by 11 _____

Now look at your last answer. Can you find your age in that answer? How many times does your age show in the answer?

Now try this trick with other people.

D) Going round and round!

142857	142857	142857	142857	142857
$\times 1$	$\times 2$	$\times 3$	$\times 4$	$\times 5$
<hr/>	<hr/>	<hr/>	<hr/>	<hr/>
<hr/>	<hr/>	<hr/>	<hr/>	<hr/>

Do you find a pattern in all these answers? Discuss this with your friends.

Division

Dolma took a loan from a friend to buy a moped for ₹ 9,588. She has to pay it back in equal amounts every month for six months.

* How much will she have to pay every month? She asked her children to calculate.

Her daughter did it this way.

$$500 + 500 + 500 + 90 + 8$$

$$\begin{array}{r}
 6 \overline{) 9588} \\
 \underline{-3000} \\
 6588 \\
 \underline{-3000} \\
 3588 \\
 \underline{-3000} \\
 588 \\
 \underline{-540} \\
 48 \\
 \underline{-48} \\
 \hline
 \times
 \end{array}$$

Her son started this way. Now you complete it.

$$\begin{array}{r}
 1000 + \\
 6 \overline{) 9588} \\
 \underline{-6000} \\
 \hline \\
 \hline \\
 \hline \\
 \hline
 \end{array}$$

Will both of them get the same answer? Discuss.

Practice time

Try to solve these using as few steps as you can.

a) $4228 \div 4$ b) $770 \div 22$ c) $9872 \div 8$

d) $672 \div 21$ e) $772 \div 7$ f) $639 \div 13$

How Many Times?

976 children are going on a picnic. They will be taken in mini buses. If 25 children can go in one bus, how many buses do they need?

* Two children have solved it. Check if they have made a mistake — correct it. Discuss.

$$\begin{array}{r}
 25 \overline{) 976} \quad 5 + 10 + 10 + 10 + 4 \\
 \underline{-125} \\
 851 \\
 \underline{-250} \\
 601 \\
 \underline{-250} \\
 351 \\
 \underline{-250} \\
 101 \\
 \underline{-100} \\
 \underline{\quad} \times
 \end{array}$$

Ans. We need 39 buses.

$$\begin{array}{r}
 25 \overline{) 976} \quad 20 + 10 + 4 + 1 \\
 \underline{-500} \\
 4767 \\
 \underline{-250} \\
 226 \\
 \underline{-125} \\
 101 \\
 \underline{-100} \\
 \underline{\quad} 1
 \end{array}$$

Ans. We need 40 buses.

Giving children the opportunity to find and discuss the errors in these examples will help their own understanding about the different steps for division. In A) a very common error has been given in which children either forget or do not understand the remainder. In B) there is a simple error of multiplication but there is also a more interesting question of whether the child has shown one extra bus for one remaining child.

How Much Petrol?

Isha has ₹ 1000 with her. She wants to buy petrol. One litre of petrol costs ₹ 67. How many litres can she buy?

Money with Isha = ₹ 1000

Cost of 1 litre = ₹ 67

Litres of petrol she can buy = $1000 \div 67 = ?$

Isha can buy _____ litres of petrol.

Find out

If Isha comes to your city, how much petrol can she buy with the same money?

Children's Day

Children are happy today. They are celebrating Children's Day. Each child will be given 4 coloured pencils from school. The school has got 969 pencils. To find out how many children can get pencils the teacher asks them to divide.

Iru's Way

$$\begin{array}{r} 4 \overline{) 969} \quad 100 + \\ - 400 \\ \hline \end{array}$$

Sreeni's Way

$$\begin{array}{r} 4 \overline{) 969} \quad 200 + \\ - \quad \quad \quad \end{array}$$

Complete Iru's and Sreeni's way of division. What is the answer you get?

Shivangi did it by a shortcut way.

I learnt it after a lot of practice. In this you have to remember many things.

Shivangi's Way

$$\begin{array}{r} 4 \overline{) 969} \quad 242 \\ \underline{-8} \\ 16 \\ \underline{-16} \\ 09 \\ \underline{-08} \\ 1 \end{array}$$

I know that I have to divide 969 with 4. But I first only look at 9. I put an arrow to remember to bring down 6.

How did you start with 9?

Iru

So now you only look at $16 \div 4$? What after that?

I remember to bring down 9 and divide by 4.

But then you are left with 1.

Yes! This is the remainder. 1 pencil is left.

Oh! I can't remember so many things. I will do it my way.

Practice Time

- * 576 books are to be packed in boxes. If one box has 24 books, how many boxes are needed?

- * 836 people are watching a movie in a hall. If the hall has 44 rows, how many people can sit in 1 row?

- * A gardener bought 458 apple trees. He wants to plant 15 trees in each row. How many rows can he plant?

How many trees would be left over?

Brain Teaser

- * Shyamli bought a battery. She read on it 'Life: 2000 hours'. She uses it throughout the day and the night. How many days will the battery run?

More with Multiplication and Division

- * A tank is full of 300 L of water. How much water will be filled in 25 tanks? If 15 buckets can be filled with one tank of water, how many buckets in all can be filled with the water in 25 tanks?

- * There are 28 *laddoos* in 1 kg. How many *laddoos* will be there in 12 kg? If 16 *laddoos* can be packed in 1 box, how many boxes are needed to pack all these *laddoos*?

- * There are 26 rooms in a school. Each room has 4 plants. If each plant needs 2 cups of water, how much water do we need for all the plants?

Make the Best Story Problem

Each line gives a story. You have to choose the question which makes the best story problem. The first one is already marked.

- 1) A shopkeeper has 50 boxes. There are 48 fruits in one box.

Tick the one question which matches with the given problem.

a) How much will the shopkeeper pay in all? ☐

b) How many fruits are there in all? ☒

c) How many more boxes will he need? ☐

Explain why (a) and (c) are not good choices.

- 2) 352 children from a school went on a camping trip. Each tent had a group of 4 children.

a) How many children did each tent have? ☐

b) How many tents do they need? ☐

c) How many children in all are in the school? ☐

- 3) A shopkeeper has 204 mangoes. He puts them in boxes. Each box has 12 mangoes.

a) How many more mangoes will he need? ☐

b) How many dozen mangoes does he sell? ☐

c) How many boxes does he need? ☐

Such exercises will help children understand the strategies to make questions related to the concepts of division and multiplication.

4) The cost of one book is ₹ 47. Sonu buys 23 books.

- a) How much money does she have?
- b) How much money does she pay for the books?
- c) What is the cost of 47 books?

Cross Check for Harisharan

Harisharan wanted to divide ₹ 2,456 amongst his 4 sons. He asked his eldest son to tell him how much money each one will get.

Papa, each of us will get $2456 \div 4 = ₹ 624$.

When Harisharan started giving ₹ 624 to each son, he was left with less money for the youngest one.

It seems you have made some mistake in the calculations. Let me check.

Harisharan multiplied 624 with 4. He got = ₹ 2,496.

Hum! This shows you have done the division wrong.

The son did the division again $2456 \div 4 = 614$.

Before telling his father he checked on his own.

$614 \times 4 = 2456$. Now, it is correct. Each one will get ₹ 614.

Practice Time

1) Do these divisions. Check your results by multiplication.

a) $438 \div 9$

d) $900 \div 10$

b) $3480 \div 12$

e) $678 \div 6$

c) $450 \div 7$

f) $2475 \div 11$

2) Solve the given sums and colour the answers in the grid given below. See what you find.

21×16

15×7

93×2

17×5

10×10

26×26

77×10

How Big? How Heavy?

Sarika collects things like marbles, coins, erasers etc. She takes some water in a glass and marks the level of water as '0'.

If I drop 5 marbles in this glass, can you guess what will be the level of water?

I think this much.

She drops 5 marbles in the glass. She marks the new level of water as 5 marbles.

Oh, how did you guess! Do you know the volume of a marble?

I just made a guess about how much water will be pushed up by the marbles. How do you find the volume?

See, each marble pushes up some water. Right? That is because it takes up some space which is its volume.

Children will need more exercises to compare the volume of solid bodies by guessing and by informal measurement (using marbles, coins, matchboxes, etc.) before they begin to use formal measures such as litres and cubic centimetres.

Your Measuring Glass

Now make a guess. Do you think the volume of 10 five-rupee coins will be more than that of 10 marbles?

Guess the volume of each of these:

- ❖ A ball is nearly _____ marbles.
- ❖ An eraser is nearly _____ marbles.
- ❖ A lemon is nearly _____ marbles.
- ❖ A pencil is nearly _____ marbles.
- ❖ A potato is nearly _____ marbles.

Now make your own measuring glass using 35 marbles.

Take a glass of water and mark the level of water as '0'. Then put in 5 marbles and mark the level of water as 5 M.

Again drop 5 marbles and mark the level of water as 10 M. Likewise make the markings for 15 M, 20 M, 25 M, 30 M and 35 M.

Now put each thing in the measuring glass and check your guess.

Try with different things like a matchbox, a stone, etc. and fill the table.

The matchbox floats. How do I find its volume?

Let's fill it with sand or nails.

Name of the thing	Its volume (nearly how many marbles?)

Children can paste a paper strip on the glass and mark the level of water using a pen or a pencil. The aim is to develop a sense of the concept of volume through examples and hands on activities without giving a definition of volume. Comparing things on the basis of volume is more abstract than comparison in terms of length or area.

Which has More Volume?

Can you tell me the volume of 6 marbles in mL?

Yes, if we make a measuring bottle.

In Class IV you made a measuring bottle for 250 mL.

Can you think of ways for making a measuring bottle which can measure 10 mL, 20 mL, 30 mL,, 60 mL? Discuss with your friend.

Tariq and Mollie made their measuring bottles.

Tariq had an injection. He used it to make his measuring bottle. Mollie used an empty medicine bottle.

I took 5 mL once in my injection. I filled it twice to mark 10 mL on my bottle.

I used this bottle which measures 10 mL to make my measuring bottle.

Mollie used her measuring bottle to find the volume of five-rupee coins. She found that **9 five-rupee coins push up 10 mL of water**. So you can also use 9 five-rupee coins to make your measuring bottle! Go ahead!

Use your measuring bottle to find out:

a) What is the volume of 6 marbles? _____ mL.

b) What is the volume of 16 one-rupee coins? _____ mL.

Now solve these in your mind.

c) The volume of 24 marbles is _____ mL.

d) The volume of 32 one-rupee coins? _____ mL.

e) Mollie puts some five-rupee coins in the measuring bottle.
How many coins has she put in it:

* if 30 mL water is pushed up? _____

* if 60 mL water is pushed up? _____

First guess and then use your measuring bottle to find out the volume in mL of some other things.

Thing	Its volume (in mL)

Guess how many litres of water your body will push up?!

How Many Can Fit In?

This is a cube whose sides are of 1 cm each. See, your Math-Magic book is 1 cm high. So guess how many such centimetre cubes will take the same space as your Math-Magic book?

To make a measuring bottle, make children use a wide-mouthed and transparent bottle so that markings can be made easily. The activity aims to develop measurement skills in children and involves both making and handling apparatus (such as measuring bottle) in the mathematics classroom.

Hey, my Math-Magic book is about ____ cm long. So ____ cm cubes will fit along its length.

And it is about ____ cm wide. So ____ cubes will fit along the width.

So total ____ cm cubes will fit on the Math-Magic book.

- Now if all these cubes are arranged in one line then how long will that line be? ____ cm

Practice time

- A stage (platform) is made with 5 Math-Magic books. The volume of this stage is the same as _____ cm cubes.
- Guess the volume of these things in cm cubes.

- A matchbox is about _____ cm cubes.

- A geometry box is about _____ cm cubes.

- An eraser is about _____ cm cubes.

How will you check your guess? Discuss.

Matchbox Play

Tanu is making a stage with matchboxes.

She first puts 14 matchboxes like this in the first layer.

The activity 'How many can fit in' requires a sense of the size of a cm cube. For finding the volume of different shapes, the teacher can make cm cubes and use matchboxes to make different models. Tanu's stage or Mohan's model are examples where children calculate volume in terms of matchboxes, which may later be converted into cm cubes.

She makes 4 such layers and her stage looks like this.

* She used _____ matchboxes to make this stage.

- * The volume of one matchbox is the same as 10 cm cubes. Then the volume of this stage is same as _____ cm cubes.
- * If all these cubes are arranged in a line, how long will that line be? _____ cm.
- * Which has more volume — your Math-Magic book or Tanu's platform?

With your friends, collect many empty matchboxes of the same size. Measure the sides and write here.

- * Use 56 matchboxes to make platforms of different heights. Fill this table.

	How high is it?	How long is it?	How wide is it?
Platform 1			
Platform 2			
Platform 3			

The volume of each platform is equal to _____ matchboxes.

- * Make deep drawings of the platforms you have made.

Practice time

Mohan arranged his matchboxes like this.

- * How many matchboxes did he use to make it? What is its volume in matchboxes? _____ matchboxes.
- * Collect empty matchboxes. Arrange them in an interesting way. Make a deep drawing of it.

Making a Paper Cube

Aanan and his friends are making a cube with paper. They cut a sheet of paper into a square of **19.5 cm** side. They cut 6 such squares. Follow these photos to make your paper cube.

1. Fold the paper into four equal parts to make lines like this.

2. Fold the top **left** corner and the corner opposite to it like this.

3. Fold the top and the bottom edges to meet the centre line. Now fold corner P...

4. So that the paper looks like this.

5. Fold corner Q in the same way. The paper will look like this now.

6. Lift corner P and slip it under the folded paper like this.

Encourage children to make different shapes of the same volume using identical units, for example, bricks or matchboxes. To calculate the sides of the platform, lengths can be rounded off to the nearest centimetre.

7. Do the same for corner Q. The paper will look like this.

8. Turn the paper and fold it to make lines like these.

9. Each child should make one such piece. Six children will take their pieces and put one inside another to make this paper cube.

Note: Remember to begin with a square paper of side 19.5 cm. Also, in step 2 you must all start by folding the **left** corner.

How Big is Your Cube?

1. a) How long is the side of your cube? _____

b) How many centimetre cubes can be arranged along its:

* Length? _____

* Width? _____

* Height? _____

How many cm cubes in all do I need to make a platform as big as the paper cube?

Thimpu

c) Answer Thimpu's questions:

To make the first layer on the table how many cm cubes will I use? _____

How many such layers will I need to make a paper cube? _____

d) So the total cm cubes = _____

e) The volume of the paper cube is same as _____ cm cubes.

If we begin with square paper of side 19.5 cm, then we get a cube of side 7 cm.

2. Anan made a big cube having double the side of your paper cube.

How many of the your paper cubes will fit in it? Try doing it by collecting all the cubes made in your class.

Packing Cubes

Ganesh and Dinga want to pack 4000 centimetre cubes in boxes. These are to be sent to a school. There are three different boxes available for packing.

Will we be able to fit all 4000 cubes in these three boxes? I think we need one more box for it.

Dinga

Ganesh

I think there is enough space in these boxes to pack all 4000 cubes.

- ✱ What is your guess? Who is right?
- ✱ How can Ganesh and Dinga test their guesses before packing the cubes in the boxes? Discuss with your friend.

Ganesh

Look at Box A. In the first layer we can arrange $20 \times 10 = 200$ cubes. And 6 such layers can be packed. So in box A we can arrange $200 \times 6 = 1200$ cubes.

Use Ganesh's method and write:

- * ____ centimetre cubes can be arranged in box B.
- * ____ centimetre cubes can be arranged in box C.
- * So ____ centimetre cubes in all can be packed in the three boxes.

Which Pipe Fills More?

Collect some old postcards. You can also use thick paper of size 14 cm × 9 cm.

Fold the postcard along the **width** to make pipe-1. Join the ends with cello tape.

Take another postcard and fold it along the **length** to make pipe-2. Join the ends with tape.

- * Guess which pipe can take more sand inside it. Hold it on a plate and pour sand to check your guess. Was your guess correct? Discuss.

Now do the same with other pipes shown here.

To make the triangle-shaped pipe-3, draw two lines on the postcard. Fold the postcard along the lines. Join the ends with tape.

Now make the square-shaped pipe-4.

Find out which pipe can take the most sand inside it. So which pipe has the most volume?

Remind children of the thread activity on page 155 where they may have seen that out of the shapes they made with a fixed perimeter, the circle had the biggest area. Here they will be looking for the shape with the biggest volume while they keep the area of the paper fixed.

Trek to Gangotri

The students of Class XII are going on a trek to Gangotri. They have to pack their bags for six days and keep them light. They also have to take things that do not take too much space. So they will look for things that have both less volume and less weight. After all, they will carry their own bags while climbing the mountains!

They even dry the onions and tomatoes to make them light. One kg of onions or tomatoes becomes 100 g when the water inside dries up.

The list of food each person will need for

- **Rice:** 100 g
- **Flour (Atta):** 100 g
- **Pulses (Dal):** $\frac{1}{3}$ the weight of rice and flour
- **Oil:** 50g
- **Sugar:** 50g
- **Milk powder:** 40g (for tea, porridge, and hot drink)
- **Tea:** Around 10g
- **Dalia:** 40g for breakfast.
- **Salt:** 5 g
- **Dried onions:** 10 g
- **Dried tomatoes:** 10 g

one day:

a) For 6 days, each person will need

Rice and flour – _____ g ? Pulses – _____ g

Dried onions – _____ g

b) How much of fresh tomatoes should be dried for 6 days for 10 people?

Even one gram extra can make the trek tough!

Guess how many of us together weigh one gram! About 100?

c) What is the total weight of food (for 6 days) in each person's bag?

How Heavy am I?

Can you guess the weight of the heaviest animal on this earth? No, it's not me. I weigh only 5000 kg!

It is the Blue Whale. Its weight is around 35 times more than me. So how many thousand kg does it weigh?

Do you remember the story of how Vaidika's daughter found the weight of an elephant? (Math-Magic Class IV Page 143)

- * Guess how many children of your weight will be equal to the weight of an elephant of 5000 kg.
- * At birth, a baby elephant weighs around 90 kg. How much did you weigh when you were born? Find out. How many times is a baby elephant heavier than you were at birth?
- * If a grown up elephant eats 136 kg of food in a day then it will eat around _____ kg in a month.

Guess about how much it will eat in a year.

Shahid Saves the Bank!

Shahid works in a bank. He sits at the

Weighing is so much easier! The weight of a 5-rupee coin is 9 g. Tell me the weight of the sack and I will tell you the number of coins in it.

cash counter. Whenever there are too many coins he does not

My bag of 5 rupee coins weighs 9 kg. So how many coins does it have?

One kg is equal to 1000g so 9 kg is equal to 9000 g. If one coin weighs 9 g, then the bag weighing 9000 g has $9000 \div 9 = \underline{\hspace{2cm}}$ coins in it. Easy!

count them. He just weighs them.

Can you hold these coins and say which is the heavier? ^{2250 g can also be written as 2 kg and 250 g. Can you explain why?}

* How many coins are there in a sack of 5 rupee coins

- a) 18 kg? _____ b) 54 kg? _____
c) 4500 g? _____ d) 2 kg and 250 g? _____
e) 1 kg and 125 g? _____

* A 2 rupee coin weighs 6 g. What is the weight of a sack with:

- a) 2200 coins? _____ kg _____ g b) 3000 coins? _____ kg

* If 100 one rupee coins weigh 485 g then how much will 10000 coins weigh? _____ kg _____ g

With your eyes closed, can you tell which is heavier — a 100-rupee note or a 50-rupee note? This may be difficult to say, but Shahid, who cannot see, has a better sense of touch than most people.

Once Shahid noticed that a bundle of notes which came to the bank felt different and heavier. He asked the manager to check. Others looked at it but found no problem. He insisted and so a machine was brought to weigh it. It showed that the notes were fake, not real ones. "Oh Shahid! You really saved the bank!" said everyone.

Find out and discuss

* How do people who cannot see make out different notes and coins? (Hint: Look for a shape, etc. on notes of Rs 20, 50, 100, 500 etc. and feel

During the discussion on checking a note as fake or real, different things can be observed. A fake note may differ in size, quality of paper and printing or the style in which numbers are written. The watermark (the white area with Gandhi's image) and the words 'भारत' and 'RBI' written on the shiny security thread are meant to prevent people from printing fake notes.

A Page to Cut Out

Angles

Sweet Box

Cut along the dark lines. Paste the shape on a thick paper. Fold along the dotted lines to get a sweet box as shown on page 126.
