3. You are told that 1,331 is a perfect cube. Can you guess without factorisation what is its cube root? Similarly, guess the cube roots of 4913, 12167, 32768.

Solution:

(i) By grouping the digits, we get 1 and 331

We know that, since, the unit digit of cube is 1, the unit digit of cube root is 1.

∴ We get 1 as unit digit of the cube root of 1331.

The cube of 1 matches with the number of second group.

∴ The ten's digit of our cube root is taken as the unit place of smallest number.

We know that, the unit's digit of the cube of a number having digit as unit's place 1 is 1.

$\therefore \sqrt[3]{1331} = 11$

(ii) By grouping the digits, we get 4 and 913

We know that, since, the unit digit of cube is 3, the unit digit of cube root is 7.

∴ we get 7 as unit digit of the cube root of 4913. We know $1^3 = 1$ and $2^3 = 8$, $1 > 4 > 8$.

Thus, 1 is taken as ten digit of cube root.

$\therefore \sqrt[3]{4913} = 17$

(iii) By grouping the digits, we get 12 and 167.

We know that, since, the unit digit of cube is 7, the unit digit of cube root is 3.

∴ 3 is the unit digit of the cube root of 12167 We know $2^3 = 8$ and $3^3 = 27$, $8 > 12 > 27$.

Thus, 2 is taken as ten digit of cube root.

$\therefore \sqrt[3]{12167} = 23$

(iv) By grouping the digits, we get 32 and 768.
We know that, since, the unit digit of cube is 8, the unit digit of cube root is 2.
$\therefore$ 2 is the unit digit of the cube root of 32768. We know $3^3 = 27$ and $4^3 = 64$, $27 > 32 > 64$.
Thus, 3 is taken as ten digit of cube root.

$\therefore \sqrt[3]{32768} = 32$
