

## EXERCISE 6.2

PAGE NO: 127

Solve the following inequalities graphically in two-dimensional plane:

10.  $x + y < 5$

**Solution:**

Given  $x + y < 5$

Consider

X	0	5
y	5	0

Now, draw a dotted line  $x + y = 5$  in the graph ( $\because x + y = 5$  is excluded in the given question)

Now, consider  $x + y < 5$

Select a point  $(0, 0)$

$$\Rightarrow 0 + 0 < 5$$

$$\Rightarrow 0 < 5 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is below the line  $x + y = 5$ . (i.e., origin is included in the region)

The graph is as follows:

2.  $2x + y \geq 6$

**Solution:**

Given  $2x + y \geq 6$

Now, draw a solid line  $2x + y = 6$  in the graph ( $\because 2x + y = 6$  is included in the given question)

Now, consider  $2x + y \geq 6$

Select a point  $(0, 0)$

$$\Rightarrow 2 \times (0) + 0 \geq 6$$

$$\Rightarrow 0 \geq 6 \text{ (this is false)}$$

$\therefore$  Solution region of the given inequality is above the line  $2x + y = 6$ . (away from the origin)

The graph is as follows:

**3.  $3x + 4y \leq 12$**

**Solution:**

Given  $3x + 4y \leq 12$

Now, draw a solid line  $3x + 4y = 12$  in the graph ( $\because 3x + 4y = 12$  is included in the given question)

Now, consider  $3x + 4y \leq 12$

Select a point  $(0, 0)$

$$\Rightarrow 3 \times (0) + 4 \times (0) \leq 12$$

$$\Rightarrow 0 \leq 12 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is below the line  $3x + 4y = 12$ . (i.e., origin is included in the region)

The graph is as follows:

4.  $y + 8 \geq 2x$

**Solution:**

Given  $y + 8 \geq 2x$

Now, draw a solid line  $y + 8 = 2x$  in the graph ( $\because y + 8 = 2x$  is included in the given question)

Now, consider  $y + 8 \geq 2x$

Select a point  $(0, 0)$

$$\Rightarrow (0) + 8 \geq 2 \times (0)$$

$$\Rightarrow 0 \leq 8 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is above the line  $y + 8 = 2x$ . (i.e., origin is included in the region)

The graph is as follows:

5.  $x - y \leq 2$

**Solution:**

Given  $x - y \leq 2$

Now, draw a solid line  $x - y = 2$  in the graph ( $\because x - y = 2$  is included in the given question).

Now, consider  $x - y \leq 2$

Select a point (0, 0)

$$\Rightarrow (0) - (0) \leq 2$$

$$\Rightarrow 0 \leq 2 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is above the line  $x - y = 2$ . (i.e., origin is included in the region)

The graph is as follows:

6.  $2x - 3y > 6$

**Solution:**

Given  $2x - 3y > 6$

Now draw a dotted line  $2x - 3y = 6$  in the graph ( $\because 2x - 3y = 6$  is excluded in the given question)

Now Consider  $2x - 3y > 6$

Select a point  $(0, 0)$

$$\Rightarrow 2 \times (0) - 3 \times (0) > 6$$

$$\Rightarrow 0 > 6 \text{ (this is false)}$$

$\therefore$  Solution region of the given inequality is below the line  $2x - 3y > 6$ . (Away from the origin)

The graph is as follows:

7.  $-3x + 2y \geq -6$

**Solution:**

Given  $-3x + 2y \geq -6$

Now, draw a solid line  $-3x + 2y = -6$  in the graph ( $\because -3x + 2y = -6$  is included in the given question).

Now, consider  $-3x + 2y \geq -6$

Select a point  $(0, 0)$

$$\Rightarrow -3 \times (0) + 2 \times (0) \geq -6$$

$$\Rightarrow 0 \geq -6 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is above the line  $-3x + 2y \geq -6$ . (i.e., origin is included in the region)

The graph is as follows:

8.  $y - 5x < 30$

**Solution:**

Given  $y - 5x < 30$

Now, draw a dotted line  $3y - 5x = 30$  in the graph ( $\because 3y - 5x = 30$  is excluded in the given question)

Now, consider  $3y - 5x < 30$

Select a point (0, 0)

$$\Rightarrow 3 \times (0) - 5 \times (0) < 30$$

$$\Rightarrow 0 < 30 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is below the line  $3y - 5x < 30$ . (i.e., origin is included in the region)

The graph is as follows:

9.  $y < -2$

**Solution:**

Given  $y < -2$

Now, draw a dotted line  $y = -2$  in the graph ( $\because y = -2$  is excluded in the given question)

Now, consider  $y < -2$

Select a point  $(0, 0)$

$\Rightarrow 0 < -2$  (this is false)

$\therefore$  Solution region of the given inequality is below the line  $y < -2$ . (i.e., away from the origin)

The graph is as follows:

**10.  $x > -3$**

**Solution:**

Given  $x > -3$

Now, draw a dotted line  $x = -3$  in the graph ( $\because x = -3$  is excluded in the given question)

Now, consider  $x > -3$

Select a point  $(0, 0)$

$$\Rightarrow 0 > -3$$

$$\Rightarrow 0 > -3 \text{ (this is true)}$$

$\therefore$  Solution region of the given inequality is right to the line  $x > -3$ . (i.e., origin is included in the region)

The graph is as follows:
