## Exercise Questions

1. Fill in the blanks.
(a) An image that cannot be obtained on a screen is called a $\qquad$ .
(b) Image formed by a convex $\qquad$ is always virtual and smaller in size.
(c) An image formed by a $\qquad$ mirror is always of the same size as that of the object.
(d) An image which can be obtained on a screen is called a $\qquad$ image.
(e) An image formed by a concave $\qquad$ cannot be obtained on a screen.

## Solution:

(a) An image that cannot be obtained on a screen is called a virtual image.
(b) Image formed by a convex mirror is always virtual and smaller in size.
(c) An image formed by a plane mirror is always of the same size as that of the object.
(d) An image which can be obtained on a screen is called a real image.
(e) An image formed by a concave lens cannot be obtained on a screen.
2. Mark ' $T$ ' if the statement is true and ' $F$ ' if it is false.
(a) We can obtain an enlarged and erect image by a convex mirror. (T/F)
(b) A concave lens always form a virtual image. (T/F)
(c) We can obtain a real, enlarged and inverted image by a concave mirror. (T/F)
(d) A real image cannot be obtained on a screen. (T/F)
(e) A concave mirror always forms a real image. (T/F)

## Solution:

a) False
b) True
c) True
d) False
e) False
3. Match the items given in Column I with one or more items in Column II.

| Column-I | Column-II |
| :--- | :--- |
| (a) A plane mirror | (i) Used as a magnifying glass. |

| (b) A convex mirror | (ii) Can form images of objects spread over a large area. |
| :---: | :---: |
| (c) A convex lens | (iii) Used by dentists to see an enlarged image of teeth. |
| (d) A concave mirror | (iv) The image is always inverted and magnified. |
| (e) A concave lens | (v) The image is erect and of the same size as the object. |
|  | (vi) The image is erect and smaller in size than the object. |
| Solution: |  |
| Column-I | Column-II |
| (a) A plane mirror | (v) The image is erect and of the same size as the object. |
| (b) A convex mirror | (ii) Can form an image of objects spread over a large area. |
| (c) A convex lens | (i) Used as a magnifying glass. |
| (d) A concave mirror | (iii) Used by dentists to see an enlarged image of teeth. |
| (e) A concave lens | (vi) The image is erect and smaller in size than the object. |

4. State the characteristics of the image formed by a plane mirror.

Solution:
Characteristics of the image formed by a plane mirror are as follows:

- Image distance and object distance are equal.
- The size of the object and image are equal.
- The image formed is erect and virtual.
- Images are laterally inverted.

5. Find out the letters of the English alphabet or any other language known to you in which the image formed in a plane mirror appears exactly like the letter itself. Discuss your findings.

## Solution:

A, H, I, M, O, T, U, V, W, X, and Y alphabets form images in a plane mirror exactly like the letter itself because these alphabets are laterally symmetric.
6. What is a virtual image? Give one situation where a virtual image is formed.

## Solution:

The image that cannot be obtained on a screen is called a virtual image. The image formed by a plane mirror is virtual.
7. State two differences between a convex and a concave lens.

## Solution:

| Convex Lens | Concave Lens |
| :--- | :--- |
| Thick in the middle and thin at the edge. | Thin in the middle and thick at the edge. |
| The image formed is real or virtual. | The image formed is virtual. |

8. Give one use each of a concave and a convex mirror.

## Solution:

Concave mirrors are used in the headlights of cars and scooters.
Convex mirrors are used as side-view mirrors in vehicles.
9. Which type of mirror can form a real image?

## Solution:

The concave mirror can form a real image.
10. Which type of lens always forms a virtual image?

## Solution:

A concave lens forms a virtual image.
Choose the correct option in questions 11-13.
11. A virtual image larger than the object can be produced by a
(i) concave lens (ii) concave mirror
(iii) convex mirror (iv) plane mirror

## Solution:

The correct answer is option (ii) concave mirror.
12. David is observing his image in a plane mirror. The distance between the mirror and his image is $\mathbf{4} \mathbf{~ m}$. If he moves 1 m towards the mirror, then the distance between David and his image will be
(i) $\mathbf{3 m}$ (ii) $\mathbf{5 m}$
(iii) 6 m (iv) 8 m

Solution:
The answer is option (iii) 6 m
13. The rearview mirror of a car is a plane mirror. A driver is reversing his car at a speed of $2 \mathrm{~m} / \mathrm{s}$. The driver sees in his rearview mirror the image of a truck parked behind his car. The speed at which the image of the truck appears to approach the driver will be
(i) $\mathbf{1 m} / \mathrm{s}$ (ii) $2 \mathrm{~m} / \mathrm{s}$
(iii) $\mathbf{4 m / s}$ (iv) $\mathbf{8 m} / \mathrm{s}$

## Solution:

The correct answer is option (iii) $4 \mathrm{~m} / \mathrm{s}$.
