

EXERCISE 10.1

PAGE: 196

1. Draw a line, say AB, take a point C outside it. Through C, draw a line parallel to AB using ruler and compasses only.

Solution:-

Steps for construction

1. Draw a line AB.
2. Take any point Q on AB and a point P outside AB and join PQ.
3. With Q as the centre and any radius, draw an arc to cut AB at E and PQ at F.
4. With P as the centre and the same radius, draw an arc IJ to cut QP at G.
5. Place the pointed tip of the compass at E and adjust the opening so that the pencil tip is at F.
6. With the same opening as in step 5 and with G as the centre, draw an arc cutting the arc IJ at H.
7. Now, join PH to draw a line CD.

2. Draw a line L. Draw a perpendicular to L at any point on L. On this perpendicular, choose a point X, 4 cm away from l. Through X, draw a line m parallel to L.

Solution:-

Steps for construction

1. Draw a line L .
2. Take any point P on line L .
3. At point P , draw a perpendicular line N .
4. Place the pointed tip of the compass at P and adjust the compass up to length of 4 cm, draw an arc to cut this perpendicular at point X .
5. At point X , again draw a perpendicular line M .

3. Let L be a line and P be a point not on L . Through P , draw a line m parallel to L . Now join P to any point Q on L . Choose any other point R on m . Through R , draw a line parallel to PQ . Let this meet L at S . What shape do the two sets of parallel lines enclose?

Solution:-

Steps for construction

1. Draw a line L.
2. Take any point Q on L and a point P outside L and join PQ.
3. Make sure that angles at point P and point Q are equal, i.e., $\angle Q = \angle P$
4. At point P, extend the line to get line M which is parallel L.
5. Then take any point R on line M.
6. At point R, draw an angle such that $\angle P = \angle R$.
7. At point R, extend the line which intersects line L at S and draw a line RS.

EXERCISE 10.2**PAGE: 199**

1. Construct $\triangle XYZ$ in which $XY = 4.5$ cm, $YZ = 5$ cm and $ZX = 6$ cm.

Solution:-

Steps of construction

1. Draw a line segment $YZ = 5$ cm.
2. With Z as a centre and radius 6 cm, draw an arc.
3. With Y as a centre and radius 4.5 cm, draw another arc, cutting the previous arc at X.
4. Join XY and XZ.

Then, $\triangle XYZ$ is the required triangle.

2. Construct an equilateral triangle of side 5.5 cm.

Solution:-

Steps of construction

1. Draw a line segment $AB = 5.5$ cm.
2. With A as a centre and radius 5.5 cm, draw an arc.
3. With B as a centre and radius 5.5 cm, draw another arc, cutting the previous arc at C.
4. Join CA and CB.

Then, $\triangle ABC$ is the required equilateral triangle.

3. Draw $\triangle PQR$ with $PQ = 4$ cm, $QR = 3.5$ cm and $PR = 4$ cm. What type of triangle is this?

Solution:-

Steps of construction

1. Draw a line segment $QR = 3.5$ cm.
2. With Q as a centre and radius 4 cm, draw an arc.
3. With R as a centre and radius 4 cm, draw another arc, cutting the previous arc at P.
4. Join PQ and PR.

Then, $\triangle PQR$ is the required isosceles triangle.

4. Construct $\triangle ABC$, such that $AB = 2.5$ cm, $BC = 6$ cm and $AC = 6.5$ cm. Measure $\angle B$.

Solution:-

1. Draw a line segment $BC = 6$ cm.
2. With B as a centre and radius 2.5 cm, draw an arc.
3. With C as a centre and radius 6.5 cm, draw another arc, cutting the previous arc at A.
4. Join AB and AC.

Then, $\triangle ABC$ is the required triangle.

5. When we will measure the angle B of triangle by a protractor, the angle is equal to $\angle B = 90^\circ$

EXERCISE 10.3**PAGE: 200**

1. Construct $\triangle DEF$ such that $DE = 5$ cm, $DF = 3$ cm and $m\angle EDF = 90^\circ$.

Solution:-

Steps of construction

1. Draw a line segment $DF = 3$ cm.
2. At point D, draw a ray DX to making an angle of 90° i.e., $\angle XDF = 90^\circ$.
3. Along DX, set off $DE = 5$ cm.
4. Join EF.

Then, $\triangle EDF$ is the required right-angled triangle.

2. Construct an isosceles triangle in which the lengths of each of its equal sides is 6.5 cm and the angle between them is 110° .

Solution:-

Steps of construction

1. Draw a line segment $AB = 6.5$ cm.
2. At point A, draw a ray AX to making an angle of 110° , i.e., $\angle XAB = 110^\circ$.
3. Along AX, set off $AC = 6.5$ cm.
4. Join CB.

Then, $\triangle ABC$ is the required isosceles triangle.

3. Construct $\triangle ABC$ with $BC = 7.5$ cm, $AC = 5$ cm and $m\angle C = 60^\circ$.

Solution:-

Steps of construction

1. Draw a line segment $BC = 7.5 \text{ cm}$.
2. At point C, draw a ray CX to making an angle of 60° , i.e., $\angle XCB = 60^\circ$.
3. Along CX, set off $AC = 5 \text{ cm}$.
4. Join AB.

Then, $\triangle ABC$ is the required triangle.

EXERCISE 10.4**PAGE: 202**

1. Construct $\triangle ABC$, given $m\angle A = 60^\circ$, $m\angle B = 30^\circ$ and $AB = 5.8$ cm.

Solution:-

Steps of construction:

1. Draw a line segment $AB = 5.8$ cm.
2. At point A, draw a ray P to making an angle of 60° , i.e., $\angle PAB = 60^\circ$.
3. At point B, draw a ray Q to making an angle of 30° , i.e., $\angle QBA = 30^\circ$.
4. Now, the two rays – AP and BQ – intersect at point C.

Then, $\triangle ABC$ is the required triangle.

2. Construct ΔPQR if $PQ = 5$ cm, $m\angle PQR = 105^\circ$ and $m\angle QRP = 40^\circ$.

(Hint: Recall angle-sum property of a triangle).

Solution:-

We know that the sum of the angles of a triangle is 180° .

$$\therefore \angle PQR + \angle QRP + \angle RPQ = 180^\circ$$

$$= 105^\circ + 40^\circ + \angle RPQ = 180^\circ$$

$$= 145^\circ + \angle RPQ = 180^\circ$$

$$= \angle RPQ = 180^\circ - 145^\circ$$

$$= \angle RPQ = 35^\circ$$

Hence, the measures of $\angle RPQ$ is 35° .

Steps of construction

1. Draw a line segment $PQ = 5$ cm.
2. At point P, draw a ray L to making an angle of 105° , i.e., $\angle LPQ = 35^\circ$.

3. At point Q, draw a ray M to making an angle of 40° , i.e., $\angle MQP = 105^\circ$.

4. Now, the two rays – PL and QM – intersect at point R.

Then, ΔPQR is the required triangle.

3. Examine whether you can construct ΔDEF , such that $EF = 7.2$ cm, $m\angle E = 110^\circ$ and $m\angle F = 80^\circ$. Justify your answer.

Solution:-

From the question, it is given that

$$EF = 7.2 \text{ cm}$$

$$\angle E = 110^\circ$$

$$\angle F = 80^\circ$$

Now, we have to check whether it is possible to construct ΔDEF from the given values.

We know that the sum of the angles of a triangle is 180° .

Then,

$$\angle D + \angle E + \angle F = 180^\circ$$

$$\angle D + 110^\circ + 80^\circ = 180^\circ$$

$$\angle D + 190^\circ = 180^\circ$$

$$\angle D = 180^\circ - 190^\circ$$

$$\angle D = -10^\circ$$

We may observe that the sum of two angles is 190° is greater than 180° . So, it is not possible to construct a triangle.

EXERCISE 10.5**PAGE: 203**

1. Construct the right-angled ΔPQR , where $m\angle Q = 90^\circ$, $QR = 8\text{ cm}$ and $PR = 10\text{ cm}$.

Solution:-

Steps of construction

1. Draw a line segment $QR = 8\text{ cm}$.
2. At point Q, draw a ray QY to making an angle of 90° , i.e., $\angle YQR = 90^\circ$.
3. With R as a centre and radius 10 cm , draw an arc that cuts the ray QY at P.
4. Join PR.

Then, ΔPQR is the required right-angled triangle.

2. Construct a right-angled triangle whose hypotenuse is 6 cm long and one of the legs is 4 cm long

Solution:-

Let us consider $\triangle ABC$ is a right-angled triangle at $\angle B = 90^\circ$

Then,

AC is hypotenuse = 6 cm ... [Given in the question]

BC = 4 cm

Now, we have to construct the right-angled triangle by using the above values.

Steps of construction

1. Draw a line segment $BC = 4$ cm.
2. At point B, draw a ray BX to making an angle of 90° , i.e., $\angle XBC = 90^\circ$.
3. With C as a centre and radius 6 cm, draw an arc that cuts the ray BX at A.

4. Join AC.

Then, $\triangle ABC$ is the required right-angled triangle.

3. Construct an isosceles right-angled triangle ABC, where $m\angle ACB = 90^\circ$ and $AC = 6$ cm.

Solution:-

Steps of construction

1. Draw a line segment $BC = 6$ cm.
2. At point C, draw a ray CX to making an angle of 90° , i.e., $\angle XCB = 90^\circ$.
3. With C as a centre and radius 6 cm, draw an arc that cuts the ray CX at A.
4. Join AB.

Then, $\triangle ABC$ is the required right-angled triangle.
