

EXERCISE 11.3**PAGE: 223**

1. Find the circumference of the circle with the following radius. (Take $\pi = 22/7$)

(a) 14 cm

Solution:-

Given, the radius of the circle = 14 cm

Circumference of the circle = $2\pi r$

$$= 2 \times (22/7) \times 14$$

$$= 2 \times 22 \times 2$$

$$= 88 \text{ cm}$$

(b) 28 mm

Solution:-

Given, the radius of the circle = 28 mm

Circumference of the circle = $2\pi r$

$$= 2 \times (22/7) \times 28$$

$$= 2 \times 22 \times 4$$

$$= 176 \text{ mm}$$

(c) 21 cm

Solution:-

Given, the radius of the circle = 21 cm

Circumference of the circle = $2\pi r$

$$= 2 \times (22/7) \times 21$$

$$= 2 \times 22 \times 3$$

$$= 132 \text{ cm}$$

2. Find the area of the following circles, given that

(a) Radius = 14 mm (Take $\pi = 22/7$)

Solution:

Given, the radius of the circle = 14 mm

Then,

Area of the circle = πr^2

$$= 22/7 \times 14^2$$

$$= 22/7 \times 196$$

$$= 22 \times 28$$

$$= 616 \text{ mm}^2$$

(b) Diameter = 49 m

Solution:

Given, the diameter of the circle (d) = 49 m

We know that radius (r) = $d/2$

$$= 49/2$$

$$= 24.5 \text{ m}$$

Then,

Area of the circle = πr^2

$$= 22/7 \times (24.5)^2$$

$$= 22/7 \times 600.25$$

$$= 22 \times 85.75$$

$$= 1886.5 \text{ m}^2$$

(c) Radius = 5 cm

Solution:

Given, the radius of the circle = 5 cm

Then,

$$\text{Area of the circle} = \pi r^2$$

$$= \frac{22}{7} \times 5^2$$

$$= \frac{22}{7} \times 25$$

$$= \frac{550}{7}$$

$$= 78.57 \text{ cm}^2$$

3. If the circumference of a circular sheet is 154 m, find its radius. Also, find the area of the sheet. (Take $\pi = \frac{22}{7}$)

Solution:-

From the question, it is given that

$$\text{Circumference of the circle} = 154 \text{ m}$$

Then,

$$\text{We know that the circumference of the circle} = 2\pi r$$

$$154 = 2 \times \left(\frac{22}{7}\right) \times r$$

$$154 = \frac{44}{7} \times r$$

$$r = \frac{(154 \times 7)}{44}$$

$$r = \frac{(14 \times 7)}{4}$$

$$r = \frac{(7 \times 7)}{2}$$

$$r = \frac{49}{2}$$

$$r = 24.5 \text{ m}$$

Now,

$$\text{Area of the circle} = \pi r^2$$

$$= \frac{22}{7} \times (24.5)^2$$

$$= \frac{22}{7} \times 600.25$$

$$= 22 \times 85.75$$

$$= 1886.5 \text{ m}^2$$

So, the radius of the circle is 24.5, and the area of the circle is 1886.5.

4. A gardener wants to fence a circular garden of diameter 21m. Find the length of the rope he needs to purchase, if he makes 2 rounds of the fence. Also, find the cost of the rope, if it costs ₹ 4 per meter. (Take $\pi = 22/7$)

Solution:-

From the question, it is given that

Diameter of the circular garden = 21 m

We know that radius (r) = $d/2$

$$= 21/2$$

$$= 10.5 \text{ m}$$

Then,

Circumference of the circle = $2\pi r$

$$= 2 \times (22/7) \times 10.5$$

$$= 462/7$$

$$= 66 \text{ m}$$

So, the length of rope required = $2 \times 66 = 132 \text{ m}$

Cost of 1 m rope = ₹ 4 [given]

Cost of 132 m rope = ₹ 4×132

$$= ₹ 528$$

5. From a circular sheet of radius 4 cm, a circle of radius 3 cm is removed. Find the area of the remaining sheet. (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

Radius of circular sheet $R = 4 \text{ cm}$

A circle of radius to be removed $r = 3$ cm

Then,

The area of the remaining sheet = $\pi R^2 - \pi r^2$

$$= \pi (R^2 - r^2)$$

$$= 3.14 (4^2 - 3^2)$$

$$= 3.14 (16 - 9)$$

$$= 3.14 \times 7$$

$$= 21.98 \text{ cm}^2$$

So, the area of the remaining sheet is 21.98 cm^2 .

6. Saima wants to put lace on the edge of a circular table cover of diameter 1.5 m. Find the length of the lace required, and also, find its cost if one meter of the lace costs ₹ 15. (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

Diameter of the circular table = 1.5 m

We know that radius (r) = $d/2$

$$= 1.5/2$$

$$= 0.75 \text{ m}$$

Then,

Circumference of the circle = $2\pi r$

$$= 2 \times 3.14 \times 0.75$$

$$= 4.71 \text{ m}$$

So, the length of the lace = 4.71 m

Cost of 1 m lace = ₹ 15 [given]

Cost of 4.71 m lace = ₹ 15×4.71

$$= ₹ 70.65$$

7. Find the perimeter of the adjoining figure, which is a semicircle, including its diameter.

Solution:-

From the question, it is given that

Diameter of semi-circle = 10 cm

We know that radius (r) = $d/2$

$$= 10/2$$

$$= 5 \text{ cm}$$

Then,

Circumference of the semi-circle = $\pi r + 2r$

$$= 3.14(5) + 2(5)$$

$$= 5 [3.14 + 2]$$

$$= 5 [5.14]$$

Therefore, the perimeter of the semicircle = 25.7 cm

8. Find the cost of polishing a circular table top of diameter 1.6 m, if the rate of polishing is ₹15/m². (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

Diameter of the circular table-top = 1.6 m

We know that radius (r) = $d/2$

$$= 1.6/2$$

$$= 0.8 \text{ m}$$

Then,

Area of the circular table-top = πr^2

$$= 3.14 \times 0.8^2$$

$$= 3.14 \times 0.8 \times 0.8$$

$$= 2.0096 \text{ m}^2$$

Cost for polishing 1 m² area = ₹ 15 [given]

Cost for polishing 2.0096 m² area = ₹ 15 × 2.0096

$$= ₹ 30.144$$

Hence, the cost of polishing 2.0096 m² area is ₹ 30.144.

9. Shazli took a wire of length 44 cm and bent it into the shape of a circle. Find the radius of that circle. Also, find its area. If the same wire is bent into the shape of a square, what will be the length of each of its sides? Which figure encloses more area, the circle or the square? (Take $\pi = 22/7$)

Solution:-

From the question, it is given that

Length of wire that Shazli took = 44 cm

Then,

If the wire is bent into a circle,

We know that the circumference of the circle = $2\pi r$

$$44 = 2 \times (22/7) \times r$$

$$44 = 44/7 \times r$$

$$(44 \times 7)/44 = r$$

$$r = 7 \text{ cm}$$

Area of the circle = πr^2

$$= 22/7 \times 7^2$$

$$= 22/7 \times 7 \times 7$$

$$= 22 \times 7$$

$$= 154 \text{ cm}^2$$

Now,

If the wire is bent into a square,

The length of each side of the square = $44/4$

= 11 cm

Area of the square = Length of the side of square²

= 11^2

= 121 cm²

By comparing the two areas of the square and circle,

Clearly, the circle encloses more area.

10. From a circular card sheet of radius 14 cm, two circles of radius 3.5 cm and a rectangle of length 3 cm and breadth 1cm are removed. (As shown in the adjoining figure.) Find the area of the remaining sheet. (Take $\pi = 22/7$)

Solution:-

From the question, it is given that

Radius of the circular card sheet = 14 cm

Radius of the two small circles = 3.5 cm

Length of the rectangle = 3 cm

Breadth of the rectangle = 1 cm

First, we have to find out the area of the circular card sheet, two circles and the rectangle to find out the remaining area.

Now,

Area of the circular card sheet = πr^2

= $22/7 \times 14^2$

= $22/7 \times 14 \times 14$

$$= 22 \times 2 \times 14$$

$$= 616 \text{ cm}^2$$

$$\text{Area of the 2 small circles} = 2 \times \pi r^2$$

$$= 2 \times (22/7 \times 3.5^2)$$

$$= 2 \times (22/7 \times 3.5 \times 3.5)$$

$$= 2 \times ((22/7) \times 12.25)$$

$$= 2 \times 38.5$$

$$= 77 \text{ cm}^2$$

$$\text{Area of the rectangle} = \text{Length} \times \text{Breadth}$$

$$= 3 \times 1$$

$$= 3 \text{ cm}^2$$

Now,

$$\text{The area of the remaining part} = \text{Card sheet area} - (\text{Area of two small circles} + \text{Rectangle area})$$

$$= 616 - (77 + 3)$$

$$= 616 - 80$$

$$= 536 \text{ cm}^2$$

11. A circle of radius 2 cm is cut out from a square piece of an aluminium sheet of side 6 cm. What is the area of the leftover aluminium sheet? (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

$$\text{Radius of circle} = 2 \text{ cm}$$

$$\text{Square sheet side} = 6 \text{ cm}$$

First, we have to find out the area of the square aluminium sheet and circle to find out the remaining area.

Now,

$$\text{Area of the square} = \text{side}^2$$

$$= 6^2$$

$$= 36 \text{ cm}^2$$

$$\text{Area of the circle} = \pi r^2$$

$$= 3.14 \times 2^2$$

$$= 3.14 \times 2 \times 2$$

$$= 3.14 \times 4$$

$$= 12.56 \text{ cm}^2$$

Now,

The area of the remaining part = Area of the aluminium square sheet – The area of the circle

$$= 36 - 12.56$$

$$= 23.44 \text{ cm}^2$$

12. The circumference of a circle is 31.4 cm. Find the radius and the area of the circle. (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

$$\text{Circumference of a circle} = 31.4 \text{ cm}$$

We know that,

$$\text{Circumference of a circle} = 2\pi r$$

$$31.4 = 2 \times 3.14 \times r$$

$$31.4 = 6.28 \times r$$

$$31.4/6.28 = r$$

$$r = 5 \text{ cm}$$

Then,

$$\text{Area of the circle} = \pi r^2$$

$$= 3.14 \times 5^2$$

$$= 3.14 \times 25$$

$$= 78.5 \text{ cm}$$

13. A circular flower bed is surrounded by a path 4 m wide. The diameter of the flower bed is 66 m. What is the area of this path? ($\pi = 3.14$)

Solution:-

From the question, it is given that

Diameter of the flower bed = 66 m

Then,

Radius of the flower bed = $d/2$

$$= 66/2$$

$$= 33 \text{ m}$$

Area of flower bed = πr^2

$$= 3.14 \times 33^2$$

$$= 3.14 \times 1089$$

$$= 3419.46 \text{ m}$$

Now, we have to find the area of the flower bed and path together.

So, the radius of the flower bed and path together = $33 + 4 = 37 \text{ m}$

Area of the flower bed and path together = πr^2

$$= 3.14 \times 37^2$$

$$= 3.14 \times 1369$$

$$= 4298.66 \text{ m}$$

Finally,

Area of the path = Area of the flower bed and path together – Area of the flower bed

$$= 4298.66 - 3419.46$$

$$= 879.20 \text{ m}^2$$

14. A circular flower garden has an area of 314 m^2 . A sprinkler at the centre of the garden can cover an area that has a radius of 12 m. Will the sprinkler water the entire garden? (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

Area of the circular flower garden = 314 m^2

The sprinkler at the centre of the garden can cover an area that has a radius = 12 m

Area of the circular flower garden = πr^2

$$314 = 3.14 \times r^2$$

$$314/3.14 = r^2$$

$$r^2 = 100$$

$$r = \sqrt{100}$$

$$r = 10 \text{ m}$$

\therefore Radius of the circular flower garden is 10 m .

The sprinkler can cover an area of a radius of 12 m .

Hence, the sprinkler will water the whole garden.

15. Find the circumference of the inner and the outer circles, shown in the adjoining figure? (Take $\pi = 3.14$)

**Solution:-**

From the figure,

Radius of inner circle = outer circle radius – 10

$$= 19 - 10$$

$$= 9 \text{ m}$$

Circumference of the inner circle = $2\pi r$

$$= 2 \times 3.14 \times 9$$

$$= 56.52 \text{ m}$$

Then,

$$\text{Radius of outer circle} = 19 \text{ m}$$

$$\text{Circumference of the outer circle} = 2\pi r$$

$$= 2 \times 3.14 \times 19$$

$$= 119.32 \text{ m}$$

16. How many times a wheel of radius 28 cm must rotate to go 352 m? (Take $\pi = 22/7$)

Solution:-

From the question, it is given that

$$\text{Radius of the wheel} = 28 \text{ cm}$$

$$\text{Circumference of the wheel} = 2\pi r$$

$$= 2 \times 22/7 \times 28$$

$$= 2 \times 22 \times 4$$

$$= 176 \text{ cm}$$

Now, we have to find the number of rotations of the wheel.

$$= \text{Total distance to be covered} / \text{Circumference of the wheel}$$

$$= 352 \text{ m} / 176 \text{ cm}$$

$$= 35200 \text{ cm} / 176 \text{ cm}$$

$$= 200$$

17. The minute hand of a circular clock is 15 cm long. How far does the tip of the minute hand move in 1 hour? (Take $\pi = 3.14$)

Solution:-

From the question, it is given that

$$\text{Length of the minute hand of the circular clock} = 15 \text{ cm}$$

Then,

Distance travelled by the tip of minute hand in 1 hour = Circumference of the clock

$$= 2\pi r$$

$$= 2 \times 3.14 \times 15$$

$$= 94.2 \text{ cm}$$
