

EXERCISE 13.9

PAGE NO: 236

1. A wooden bookshelf has external dimensions as follows: Height = 110cm, Depth = 25cm,

Breadth = 85cm (see fig. 13.31). The thickness of the plank is 5cm everywhere. The external faces are to be polished, and the inner faces are to be painted. If the rate of polishing is 20 paise per cm^2 and the rate of painting is 10 paise per cm^2 , find the total expenses required for polishing and painting the surface of the bookshelf.

Fig. 13.31

Solution:

External dimensions of book self:

Length, $l = 85\text{cm}$

Breadth, $b = 25\text{ cm}$

Height, $h = 110\text{ cm}$

External surface area of the shelf while leaving out the front face of the shelf.

$$= lh + 2(lb + bh)$$

$$= [85 \times 110 + 2(85 \times 25 + 25 \times 110)] = (9350 + 9750) = 19100$$

External surface area of the shelf is 19100 cm^2

$$\text{Area of front face} = [85 \times 110 - 75 \times 100 + 2(75 \times 5)] = 1850 + 750$$

So, the area is 2600 cm^2

$$\text{Area to be polished} = (19100 + 2600)\text{ cm}^2 = 21700\text{ cm}^2.$$

Cost of polishing 1 cm^2 area = Rs 0.20

$$\text{Cost of polishing } 21700\text{ cm}^2 \text{ area Rs. } (21700 \times 0.20) = \text{Rs } 4340$$

Dimensions of the row of the bookshelf

$$\text{Length}(l) = 75\text{ cm}$$

Breadth (b) = 20 cm and

Height(h) = 30 cm

Area to be painted in one row = $2(l+h)b+lh = [2(75+30) \times 20 + 75 \times 30] = (4200 + 2250) = 6450$

So, the area is 6450 cm^2 .

Area to be painted in 3 rows = $(3 \times 6450) \text{ cm}^2 = 19350 \text{ cm}^2$.

Cost of painting 1 cm^2 area = Rs. 0.10

Cost of painting 19350 cm^2 area = Rs $(19350 \times 0.1) = \text{Rs } 1935$

Total expense required for polishing and painting = Rs. $(4340 + 1935) = \text{Rs. } 6275$

Answer: The cost for polishing and painting the surface of the bookshelf is Rs. 6275.

2. The front compound wall of a house is decorated by wooden spheres of diameter 21 cm, placed on small supports as shown in fig. 13.32. Eight such spheres are used for this purpose and are to be painted silver. Each support is a cylinder of radius 1.5 cm and height 7 cm and is to be painted black. Find the cost of paint required if silver paint costs 25 paise per cm^2 and black paint costs 5 paise per cm^2 .

Fig. 13.32

Solution:

Diameter of the wooden sphere = 21 cm

Radius of the wooden sphere, $r = \text{diameter} / 2 = (21/2) \text{ cm} = 10.5 \text{ cm}$

Formula: Surface area of the wooden sphere = $4\pi r^2$

$$= 4 \times (22/7) \times (10.5)^2 = 1386$$

So, the surface area is 1386 cm^2

Radius of the circular end of cylindrical support = 1.5 cm

Height of the cylindrical support = 7 cm

Curved surface area = $2\pi rh$

$$= 2 \times (22/7) \times 1.5 \times 7 = 66$$

So, CSA is 66 cm^2

Now,

Area of the circular end of cylindrical support = πr^2

$$= (22/7) \times 1.5^2$$

$$= 7.07$$

Area of the circular end is 7.07 cm²

Again,

$$\text{Area to be painted silver} = [8 \times (1386 - 7.07)] = 8 \times 1378.93 = 11031.44$$

Area to be painted is 11031.44 cm²

$$\text{Cost for painting with silver colour} = \text{Rs}(11031.44 \times 0.25) = \text{Rs } 2757.86$$

$$\text{Area to be painted black} = (8 \times 66) \text{ cm}^2 = 528 \text{ cm}^2$$

$$\text{Cost for painting with black colour} = \text{Rs } (528 \times 0.05) = \text{Rs } 26.40$$

Therefore, the total painting cost is

$$= \text{Rs}(2757.86 + 26.40)$$

$$= \text{Rs } 2784.26$$

3. The diameter of a sphere is decreased by 25%. By what per cent does its curved surface area decrease?

Solution:

Let the diameter of the sphere be “d”.

Radius of the sphere, $r_1 = d/2$

New radius of the sphere, say $r_2 = (d/2) \times (1 - 25/100) = 3d/8$

Curved surface area of the sphere, $(CSA)_1 = 4\pi r_1^2 = 4\pi \times (d/2)^2 = \pi d^2 \dots (1)$

Curved surface area of the sphere when the radius is decreased $(CSA)_2 = 4\pi r_2^2 = 4\pi \times (3d/8)^2 = (9/16)\pi d^2 \dots (2)$

From equations (1) and (2), we have

$$\text{Decrease in surface area of sphere} = (CSA)_1 - (CSA)_2$$

$$= \pi d^2 - (9/16)\pi d^2$$

$$= (7/16)\pi d^2$$

$$\text{Percentage decrease in surface area of sphere} = \frac{(CSA)_1 - (CSA)_2}{(CSA)_1} \times 100$$

$$= (7d^2/16d^2) \times 100 = 700/16 = 43.75\%$$

Therefore, the percentage decrease in the surface area of the sphere is 43.75%.
