## EXERCISE 15.1

1. In a cricket match, a batswoman hits a boundary 6 times out of 30 balls she plays. Find the probability that she did not hit a boundary.

## Solution:

According to the question,
Total number of balls $=30$
Number of boundary $=6$
Number of times batswoman didn't hit boundary $=30-6=24$
Probability she did not hit a boundary $=24 / 30=4 / 5$
2. 1500 families with 2 children were selected randomly, and the following data were recorded:

| Number of girls in a family | 2 | 1 | 0 |
| :--- | :--- | :--- | :--- |
| Number of families | 475 |  | 814 |

Compute the probability of a family, chosen at random, having
(i) 2 girls
(ii) 1 girl
(iii) No girl

Also check whether the sum of these probabilities is 1 .
Solution:
Total numbers of families $=1500$
(i) Number of families having 2 girls $=475$

Probability $=$ Number of families having 2 girls/Total number of families
$=475 / 1500=19 / 60$
(ii) Number of families having 1 girl $=814$

Probability $=$ Number of families having 1 girl/Total number of families
$=814 / 1500=407 / 750$
(iii) Number of families having 0 girls $=211$

Probability $=$ Number of families having 0 girls/Total number of families
$=211 / 1500$
Sum of the probability $=(19 / 60)+(407 / 750)+(211 / 1500)$
$=(475+814+211) / 1500$
$=1500 / 1500=1$
Yes, the sum of these probabilities is 1 .
3. Refer to Example 5, Section 14.4, Chapter 14. Find the probability that a student of the class was born in August.
Solution:

Total number of students in the class $=40$
Number of students born in August $=6$
The probability that a student of the class was born in August $=6 / 40=3 / 20$
4. Three coins are tossed simultaneously 200 times with the following frequencies of different outcomes:

| Outcome | 3 heads | 2 heads | 1 head | No head |
| :--- | :--- | :--- | :--- | :--- |
| Frequency | 23 | 72 | 77 | 28 |

If the three coins are simultaneously tossed again, compute the probability of $\mathbf{2}$ heads coming up.
Solution:
Number of times 2 heads come up $=72$
Total number of times the coins were tossed $=200$
$\therefore$, the probability of 2 heads coming up $=72 / 200=9 / 25$
5. An organisation selected 2400 families at random and surveyed them to determine a relationship between income level and the number of vehicles in a family. The information gathered is listed in the table below:

| Monthly income <br> (in ₹) | Vehicles per family |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | 0 | 1 | 2 | Above 2 |
| Less than 7000 | 10 | 160 | 25 | 0 |
| $7000-10000$ | 0 | 305 | 27 | 2 |
| $10000-13000$ | 1 | 535 | 29 | 1 |
| $13000-16000$ | 2 | 469 | 59 | 25 |
| 16000 or more | 1 | 579 | 82 | 88 |
| S |  |  |  |  |

Suppose a family is chosen. Find the probability that the family chosen is
(i) earning ₹ 10000 - 13000 per month and owning exactly 2 vehicles.
(ii) earning ₹ 16000 or more per month and owning exactly 1 vehicle.
(iii) earning less than $₹ 7000$ per month and does not own any vehicle.
(iv) earning ₹ 13000 - $\mathbf{1 6 0 0 0}$ per month and owning more than $\mathbf{2}$ vehicles.
(v) owning not more than 1 vehicle.

Solution:
Total number of families $=2400$
(i) Number of families earning ₹ $10000-13000$ per month and owning exactly 2 vehicles $=29$
$\therefore$, the probability that the family chosen is earning ₹ $10000-13000$ per month and owning exactly 2 vehicles $=29 / 2400$
(ii) Number of families earning ₹ 16000 or more per month and owning exactly 1 vehicle $=579$
$\therefore$, the probability that the family chosen is earning₹ 16000 or more per month and owning exactly 1 vehicle $=579 / 2400$
(iii) Number of families earning less than $₹ 7000$ per month and does not own any vehicle $=10$
$\therefore$, the probability that the family chosen is earning less than ₹7000 per month and does not own any vehicle $=10 / 2400$ $=1 / 240$
(iv) Number of families earning ₹13000-16000 per month and owning more than 2 vehicles $=25$
$\therefore$, the probability that the family chosen is earning ₹ $13000-16000$ per month and owning more than 2 vehicles $=$ $25 / 2400=1 / 96$
(v) Number of families owning not more than 1 vehicle $=10+160+0+305+1+535+2+469+1+579$ $=2062$
$\therefore$, the probability that the family chosen owns not more than 1 vehicle $=2062 / 2400=1031 / 1200$
6. Refer to Table 14.7, Chapter 14.
(i) Find the probability that a student obtained less than $20 \%$ in the mathematics test.
(ii) Find the probability that a student obtained marks 60 or above.

Solution:

| Marks | Number of students |
| :--- | :--- |
| $0-20$ | 7 |
| $20-30$ | 10 |
| $30-40$ | 20 |
| $40-50$ | 20 |
| $50-60$ | 10 |
| $70-70$ | 80 |
| Total above |  |

Total number of students $=90$
(i) Number of students who obtained less than $20 \%$ in the mathematics test $=7$
$\therefore$, the probability that a student obtained less than $20 \%$ in the mathematics test $=7 / 90$
(ii) Number of students who obtained marks 60 or above $=15+8=23$
$\therefore$, the probability that a student obtained marks 60 or above $=23 / 90$
7. To know the opinion of the students about the subject statistics, a survey of 200 students was conducted. The data is recorded in the following table.

| Opinion | Number of students |
| :--- | :--- |
| like | 135 |
| dislike | 65 |

Find the probability that a student chosen at random
(i) likes statistics, (ii) does not like it.

Solution:
Total number of students $=135+65=200$
(i) Number of students who like statistics $=135$
, the probability that a student likes statistics $=135 / 200=27 / 40$
(ii) Number of students who do not like statistics $=65$
$\therefore$, the probability that a student does not like statistics $=65 / 200=13 / 40$
8. Refer to Q.2, Exercise 14.2. What is the empirical probability that an engineer lives:
(i) less than $7 \mathbf{k m}$ from her place of work?
(ii) more than or equal to $\mathbf{7 k m}$ from her place of work?
(iii) Within $1 / 2 \mathrm{~km}$ from her place of work?

Solution:
The distance (in km ) of 40 engineers from their residence to their place of work were found as follows:

| 5 | 3 | 10 | 20 | 25 | 11 | 13 | 7 | 12 | 31 | 19 | 10 | 12 | 17 | 18 | 11 | 3 | 2 |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 17 | 16 | 2 | 7 | 9 | 7 | 8 | 3 | 5 | 12 | 15 | 18 | 3 | 12 | 14 | 2 | 9 | 6 |  |
| 15 | 15 | 7 | 6 | 12 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Total numbers of engineers $=40$
(i) Number of engineers living less than 7 km from their place of work $=9$
, the probability that an engineer lives less than 7 km from her place of work $=9 / 40$
(ii) Number of engineers living more than or equal to 7 km from their place of work $=40-9=31$
, probability that an engineer lives more than or equal to 7 km from her place of work $=31 / 40$
(iii) Number of engineers living within $1 / 2 \mathrm{~km}$ from their place of work $=0$
$\therefore$, the probability that an engineer lives within $1 / 2 \mathrm{~km}$ from her place of work $=0 / 40=0$
9. Activity : Note the frequency of two-wheelers, three-wheelers and four-wheelers going past during a time interval, in front of your school gate. Find the probability that any one vehicle out of the total vehicles you have observed is a two-wheeler.

## Solution:

The question is an activity to be performed by the students.
Hence, perform the activity by yourself and note down your inference.
10. Activity : Ask all the students in your class to write a 3-digit number. Choose any student from the room at random. What is the probability that the number written by her/him is divisible by 3 ? Remember that a number is divisible by 3 , if the sum of its digits is divisible by 3 .

## Solution:

The question is an activity to be performed by the students.
Hence, perform the activity by yourself and note down your inference.
11. Eleven bags of wheat flour, each marked 5 kg , actually contained the following weights of flour (in kg ):

| 4.97 | 5.05 | 5.08 | 5.03 | 5.00 | 5.06 | 5.08 | 4.98 | 5.04 | 5.07 | 5.00 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Find the probability that any of these bags chosen at random contains more than $\mathbf{5} \mathbf{k g}$ of flour.

## Solution:

Total number of bags present $=11$
Number of bags containing more than 5 kg of flour $=7$
$\therefore$, the probability that any of the bags chosen at random contains more than 5 kg of flour $=7 / 11$
12. In Q.5, Exercise 14.2, you were asked to prepare a frequency distribution table, regarding the concentration of sulphur dioxide in the air in parts per million of a certain city for $\mathbf{3 0}$ days. Using this table, find the probability of the concentration of sulphur dioxide in the interval 0.12-0.16 on any of these days.

The data obtained for $\mathbf{3 0}$ days is as follows:

| 0.03 | 0.08 | 0.08 | 0.09 | 0.04 | 0.17 | 0.16 | 0.05 | 0.02 | 0.06 | 0.18 | 0.20 | 0.11 | 0.08 | 0.12 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0.13 | 0.22 | 0.07 | 0.08 | 0.01 | 0.10 | 0.06 | 0.09 | 0.18 | 0.11 | 0.07 | 0.05 | 0.07 | 0.01 | 0.04 |

## Solution:

Total number of days in which the data was recorded $=30$ days
Number of days in which sulphur dioxide was present in between the interval 0.12-0.16 $=2$
$\therefore$, the probability of the concentration of sulphur dioxide in the interval $0.12-0.16$ on any of these days $=2 / 30=1 / 15$
13. In Q.1, Exercise 14.2, you were asked to prepare a frequency distribution table regarding the blood groups of 30 students of a class. Use this table to determine the probability that a student of this class, selected at random, has blood group AB.
The blood groups of 30 students of Class VIII are recorded as follows:
$\mathrm{A}, \mathrm{B}, \mathrm{O}, \mathrm{O}, \mathrm{AB}, \mathrm{O}, \mathrm{A}, \mathrm{O}, \mathrm{B}, \mathrm{A}, \mathrm{O}, \mathrm{B}, \mathrm{A}, \mathrm{O}, \mathrm{O}, \mathrm{A}, \mathrm{AB}, \mathrm{O}, \mathrm{A}, \mathrm{A}, \mathrm{O}, \mathrm{O}, \mathrm{AB}, \mathrm{B}, \mathrm{A}, \mathrm{O}, \mathrm{B}, \mathrm{A}, \mathrm{B}, \mathrm{O}$.
Solution:

Total numbers of students $=30$
Number of students having blood group $\mathrm{AB}=3$
$\therefore$, the probability that a student of this class, selected at random, has blood group $\mathrm{AB}=3 / 30=1 / 10$
